

MAULANA ABUL KALAM AZAD UNIVERSITY OF TECHNOLOGY, WB
(Formerly West Bengal University of Technology)

Syllabus for B. Sc. in Data Science
(Effective for Academic session 2019-20)

5th SEMESTER

BSCDA-501: ADVANCED PROGRAMMING IN PYTHON

Objectives

To enable the students to:

learn how to analyze data in Python using multi-dimensional arrays in numpy, manipulate DataFrames in pandas, use SciPy library of mathematical routines,

Units	Course Content
1	Python Basic: Python fundamental, working with data
2	Importing Dataset Domain, Dataset, Package for Data Science, Importing/Exporting Data, Insight from Dataset
3	Cleaning and Preparing the Data Identify and Handle Missing Values, Data Formatting, Normalisation, Binning
4	Summarising the Data Frame Descriptive Statistics, Grouping, ANOVA, Correlation
5	Model Development Linear Regression, Prediction and Decision making
6	Data Vizualization Introduction to Matplotlib, Basic plotting, Charts

References

1. Python: 3 Manuscripts in 1 book: - Python Programming For Beginners - Python Programming For Intermediates - Python Programming for Advanced, By Maurice J.Thompson
2. Advanced Machine Learning with Python, By John Hearty
3. Taming Programming by Python, By Dr. Jeeva Jose

Syllabus for B. Sc. in Data Science
(Effective for Academic session 2019-20)

BSCDA-502: DATA SECURITY

Objectives

To enable the students to:

- to train students in the organizing and the technical realization and security of data and computers

Units	Course Content
1	<p>Unit 1: Basic Introduction about Data & Security:</p> <p>Information system security and protection objectives. The development of the Internet and the role of the intranet vs. extranet. Control at the level of management: data control, data administration, security control, control at the management level.</p>
2	<p>Unit 2: Basic tools for security : Cryptography</p> <p>Software control. Access Control: cryptography, identification numbers, digital signatures, security and credit card business. Input control, communication control, control of data processing, database control, output data control. Legal aspects of the security of information systems. Information systems security planning: security management information system, the reconstruction plan information system, ISO / IEC 17799: 2000. The insurance.</p>
3	<p>Unit 3: Threats and Challenges of Network Security:</p> <p>Network security threats: spyware, search, denial of services, misrepresentation, playback and session hijacking, redirections, viruses, Trojan horses, and worms.</p>
4	<p>Unit 4: Security Policies and methodologies:</p> <p>Defining a security policy. Protecting the network and operating system services. Protecting DNS, NIS, Proxy, e-mail, WWW, FTP, NFS. Firewalls, NAT.</p>
5	<p>Unit 5: Modern Applications and trends of Security with Case studies:</p> <p>Security services and procedures: one-time passwords, token cards / soft tokens, TACACS +, RADIUS, KERBEROS, VPN, IKE / IPSec. Secure data storage. Monitoring the performance of the system. Intrusion detection systems.</p>

MAULANA ABUL KALAM AZAD UNIVERSITY OF TECHNOLOGY, WB

Syllabus for B. Sc. in Data Science
(Effective for Academic session 2019-20)

BSCDA-503: TIME SERIES

Objectives

To enable the students to:

- have deeper knowledge of statistical theory and methods particularly common problems in economical social sciences especially economics.
- be able to estimate models for time-series data.
- be able to interpret the results of an implemented statistical analysis
- be aware of limitations and possible sources of errors in the analysis
- have ability to present results in oral and written form

Units	Course Content
1	Overview of forecasting. Models for time series: Time-dependent seasonal components. Autoregressive (AR), moving average (MA) and mixed ARMA-modeller. The Random Walk Model. Box-Jenkins methodology. Forecasts with ARIMA and VAR models. Dynamic models with time-shifted explanatory variables. The Koyck transformation . Partial adjustment and adaptive expectation models. Granger's causality tests. Stationarity, unit roots and cointegration. Modelling of volatility: ARCH - and the GARCH-models.

(Effective for Academic session 2019-20)

BSCDA-504: WEB INTELLIGENCE

Objectives

To enable the students to:

- Get introduced to topics of web intelligence.
- Study models of information retrieval, semantic webs, search engines, and web mining.
- Learn applying data mining tools to develop projects in web mining and information retrieval.

Units	Course Content
1	<p>Introduction to Web Intelligence</p> <ul style="list-style-type: none">What is Web Intelligence?Benefits of Intelligent WebIngredients of Web IntelligenceTopics of Web IntelligenceRelated Technologies <p>Information Retrieval</p> <ul style="list-style-type: none">• Document Representation• Retrieval Models• Evaluation of Retrieval Performance <p>Semantic Web</p> <ul style="list-style-type: none">• The Layered-Language Model• Metadata and Ontologies• Ontology Languages for the Web <p>Data Mining Techniques</p> <ul style="list-style-type: none">• Classification and Association• Clustering <p>Web Usage Mining</p> <ul style="list-style-type: none">• Web-Log Processing• Analyzing Web Logs• Applications of Web Usage Mining<ul style="list-style-type: none">o Clustering of Web Userso Classification Modeling of Web Userso Association Mining of Web Usageso Sequence-Pattern Analysis of Web Logs

**BSCDA-505: INTRODUCTION TO ARTIFICIAL INTELLIGENCE AND
MACHINE LEARNING**

Objectives

To enable the students to:

- To provide a strong foundation of fundamental concepts in Artificial Intelligence
- To provide a basic exposition to the goals and methods of Artificial Intelligence
- To enable the student to apply these techniques in applications which involve perception, reasoning and learning

Units	Course Content
1	Advanced Algorithms and Analysis Machine Learning Techniques Artificial Intelligence and Neural Networks Statistical Modeling for Computer Sciences Artificial Intelligence and Neural Networks Lab Machine Learning Lab Computational Intelligence
