

**Maulana Abul Kalam Azad University of Technology, West Bengal**  
(Formerly West Bengal University of Technology)

**Syllabus for B. Tech in Civil Engineering**  
(Applicable from the academic session 2018-2019)

**SEMESTER –III (2<sup>ND</sup> YR)**

CE(BS)301	Biology (Biology for Engineers)	2L + 1T =	3 Credits
<b>Module 1</b>	<p><b>Introduction</b> Bring out the fundamental differences between science and engineering by drawing a comparison between eye and camera, Bird flying and aircraft. Mention the most exciting aspect of biology as an independent scientific discipline. Why we need to study biology? Discuss how biological observations of 18th Century that lead to major discoveries. Examples from Brownian motion and the origin of thermodynamics by referring to the original observation of Robert Brown and Julius Mayor. These examples will highlight the fundamental importance of observations in any scientific inquiry.</p> <p><b>Purpose:</b> To convey that Biology is as important a scientific discipline as Mathematics, Physics and Chemistry</p>		2L
<b>Module 2</b>	<p><b>Classification</b> Hierarchy of life forms at phenomenological level. A common thread weaves this hierarchy Classification. Discuss classification based on (a) cellularity- Unicellular or multicellular (b) ultrastructure- prokaryotes or eucaryotes. (c) energy and Carbon utilization -Autotrophs, heterotrophs, lithotropes (d) Ammonia excretion – aminotelic, uricotelic, ureotelic (e) Habitataaquatic or terrestrial (e) Molecular taxonomy- three major kingdoms of life. A given organism can come under different category based on classification. Model organisms for the study of biology come from different groups. E.coli, S.cerevisiae, D. Melanogaster, C. elegance, A. Thaliana, M. musculus</p> <p><b>Purpose:</b> To convey that classification <i>per se</i> is not what biology is all about. The underlying criterion, such as morphological, biochemical or ecological be highlighted.</p>		3L
<b>Module 3</b>	<p><b>Genetics</b> Mendel's laws, Concept of segregation and independent assortment. Concept of allele. Gene mapping, Gene interaction, Epistasis. Meiosis and Mitosis be taught as a part of genetics. Emphasis to be give not to the mechanics of cell division nor the phases but how genetic material passes from parent to offspring. Concepts of recessiveness and dominance. Concept of mapping of phenotype to genes. Discuss about the single gene disorders in humans. Discuss the concept of complementation using human genetics.</p> <p><b>Purpose:</b> To convey that "Genetics is to biology what Newton's laws are to Physical Sciences"</p>		4L
<b>Module 4</b>	<p><b>Biomolecules</b> Molecules of life. In this context discuss monomeric units and polymeric structures. Discuss about sugars, starch and cellulose. Amino acids and proteins. Nucleotides and DNA/RNA. Two carbon units and lipids.</p> <p><b>Purpose:</b> To convey that all forms of life has the same building blocks and yet the manifestations are as diverse as one can imagine</p>		4L
<b>Module 5</b>	<p><b>Enzymes</b> Enzymology: How to monitor enzyme catalyzed reactions. How does an enzyme catalyzereactions. Enzyme classification. Mechanism of enzyme action. Discuss at least two examples. Enzyme kinetics and kinetic parameters. Why should we know these parameters to understand biology? RNA catalysis.</p> <p><b>Purpose:</b> To convey that without catalysis life would not have existed on earth</p>		4L
<b>Module 6</b>	<p><b>Information Transfer</b> Molecular basis of information transfer. DNA as a genetic material. Hierarchy of DNA structurefrom single stranded to double helix to nucleosomes. Concept of genetic code. Universality and degeneracy of genetic code. Define gene in terms of complementation and recombination.\</p> <p><b>Purpose:</b> The molecular basis of coding and decoding genetic information is universal</p>		4L
<b>Module 7</b>	<p><b>Macromolecular analysis</b> Proteins- structure and function. Hierarch in protein structure. Primary secondary, tertiary and quaternary structure. Proteins as enzymes, transporters, receptors and structural elements.</p> <p><b>Purpose:</b> How to analyses biological processes at the reductionistic level</p>		5L
<b>Module 8</b>	<p><b>Metabolism</b> Thermodynamics as applied to biological systems. Exothermic and endothermic versus endergonic and exergoinc reactions. Concept of Keq and its relation to standard free energy. Spontaneity. ATP as an energy currency. This should include the breakdown of glucose to CO<sub>2</sub> + H<sub>2</sub>O (Glycolysis and Krebs cycle) and synthesis of glucose from CO<sub>2</sub> and H<sub>2</sub>O (Photosynthesis). Energy yielding and energy consuming reactions. Concept of Energy charge</p> <p><b>Purpose:</b> The fundamental principles of energy transactions are the same in physical and biological world.</p>		4L
<b>Module 9</b>	<p><b>Microbiology</b> Concept of single celled organisms. Concept of species and strains. Identification and classification of microorganisms. Microscopy. Ecological aspects of single celled organisms. Sterilization and media compositions. Growth kinetics.</p>		3L
<b>Reference</b>	1) Biology: A global approach: Campbell, N. A.; Reece, J. B.; Urry, Lisa; Cain, M, L.;Wasserman, S. A.;

Brown Publishers                  6) Biology of Engineers, McGraw Hill (ISBN: 978-11-21439-931)</p>	
---	--

<b>CE(ES)301</b>	<b>Engineering Mechanics</b>	<b>3L + 1T =</b>	<b>4 Credits</b>
<b>Module 1</b>	<b>Introduction to Engineering Mechanics</b> Force Systems Basic concepts, Particle equilibrium in 2-D & 3-D; Rigid Body equilibrium; System of Forces, Coplanar Concurrent Forces, Components in Space – Resultant- Moment of Forces and its Application; Couples and Resultant of Force System, Equilibrium of System of Forces, Free body diagrams, Equations of Equilibrium of Coplanar Systems and Spatial Systems; Static Indeterminacy		6L
<b>Module 2</b>	<b>Friction</b> Types of friction, Limiting friction, Laws of Friction, Static and Dynamic Friction; Motion of Bodies, wedge friction, screw jack & differential screw jack;		3L
<b>Module 3</b>	<b>Basic Structural Analysis</b> Equilibrium in three dimensions; Method of Sections; Method of Joints; How to determine if a member is in tension or compression; Simple Trusses; Zero force members; Beams & types of beams; Frames & Machines;		4L
<b>Module 4</b>	<b>Centroid and Centre of Gravity</b> Centroid of simple figures from first principle, centroid of composite sections; Centre of Gravity and its implications; Area moment of inertia-Definition, Moment of inertia of plane sections from first principles, Theorems of moment of inertia, Moment of inertia of standard sections and composite sections; Mass moment inertia of circular plate, Cylinder, Cone, Sphere, Hook.		5L
<b>Module 5</b>	<b>Virtual Work and Energy Method-</b> Virtual displacements, principle of virtual work for particle and ideal system of rigid bodies, degrees of freedom. Active force diagram, systems with friction, mechanical efficiency. Conservative forces and potential energy (elastic and gravitational), energy equation for equilibrium. Applications of energy method for equilibrium. Stability of equilibrium.		4L
<b>Module 6</b>	<b>Review of particle dynamics-</b> Rectilinear motion; Plane curvilinear motion (rectangular, path, and polar coordinates). 3-D curvilinear motion; Relative and constrained motion; Newton's 2 <sup>nd</sup> law (rectangular, path, and polar coordinates). Work-kinetic energy, power, potential energy. Impulse-momentum (linear, angular); Impact (Direct and oblique).		4L
<b>Module 7</b>	<b>Introduction to Kinetics of Rigid Bodies</b> Basic terms, general principles in dynamics; Types of motion, Instantaneous centre of rotation in plane motion and simple problems; D'Alembert's principle and its applications in plane motion and connected bodies; Work energy principle and its application in plane motion of connected bodies; Kinetics of rigid body rotation;		5L
<b>Module 8</b>	<b>Mechanical Vibrations</b> Basic terminology, free and forced vibrations, resonance and its effects; Degree of freedom; Derivation for frequency and amplitude of free vibrations without damping and single degree of freedom system, simple problems, types of pendulum, use of simple, compound and torsion pendulums;		5L
<b>Tutorials</b>	From the above modules covering, To find the various forces and angles including resultants in various parts of wall crane, roof truss, pipes, etc.; To verify the line of polygon on various forces; To find coefficient of friction between various materials on inclined plane; Free body diagrams various systems including block-pulley; To verify the principle of moment in the disc apparatus; Helical block; To draw a load efficiency curve for a screw jack		6L

(Formerly West Bengal University of Technology)

**Syllabus for B. Tech in Civil Engineering**  
(Applicable from the academic session 2018-2019)

CE(ES)302	Energy Science & Engineering	1L + 1T =	2 Credits
<b>Module 1</b>	<p><b>Introduction to Energy Science</b> Scientific principles and historical interpretation to place energy use in the context of pressing societal, environmental and climate issues; Introduction to energy systems and resources; Introduction to Energy, sustainability &amp; the environment.</p> <p><b>Tutorials:</b> Compile a World map showing Energy Reserves by source, Total Energy consumption, Per capita energy consumption and Carbon Footprint</p>		3L
<b>Module 2</b>	<p><b>Energy Sources</b> Overview of energy systems, sources, transformations, efficiency, and storage. Fossil fuels (coal, oil, oil-bearing shale and sands, coal gasification) - past, present &amp; future, Remedies &amp; alternatives for fossil fuels - biomass, wind, solar, nuclear, wave, tidal and hydrogen; Sustainability and environmental trade-offs of different energy systems; possibilities for energy storage or regeneration (Ex. Pumped storage hydro power projects, superconductor-based energy storages, high efficiency batteries)</p> <p><b>Tutorials:</b> Compile a Word Map showing Alternative Energy source usage; Compile a Process diagram for a Pumped Storage project; Collect details of a typical North Sea oil platform. Compile a map of India showing existing potential and utilized potential for hydro power. List the pros and cons for Thermal, hydro, nuclear and solar power projects.</p>		4L
<b>Module 3</b>	<p><b>Energy &amp; Environment</b> Energy efficiency and conservation; introduction to clean energy technologies and its importance in sustainable development; Carbon footprint, energy consumption and sustainability; introduction to the economics of energy; How the economic system determines production and consumption; linkages between economic and environmental outcomes; How future energy use can be influenced by economic, environmental, trade, and research policy</p> <p><b>Tutorials:</b> Study the functioning of an Electro Static Precipitator in a thermal power plant; study the uses of coarse and fine Fly Ash from thermal power plants. Compile the safety provisions in design and construction of a reactor containment building</p>		5L
<b>Module 4</b>	<p><b>Civil Engineering Projects connected with the Energy Sources</b> Coal mining technologies, Oil exploration offshore platforms, Underground and under-sea oil pipelines, solar chimney project, wave energy caissons, coastal installations for tidal power, wind mill towers; hydropower stations above-ground and underground along with associated dams, tunnels, penstocks, etc.; Nuclear reactor containment buildings and associated buildings, design and construction constraints and testing procedures for reactor containment buildings; Spent Nuclear fuel storage and disposal systems</p> <p><b>Tutorials:</b> Compile a process diagram for a typical underground hydropower project; Collect details of a model solar chimney project; collect details of a wave energy project at Vizhinjam; Collect details of the Kalpasar (Tidal energy) project</p>		10L
<b>Module 5</b>	<p><b>Engineering for Energy conservation</b> Concept of Green Building and Green Architecture; Green building concepts (Green building encompasses everything from the choice of building materials to where a building is located, how it is designed and operated); LEED ratings; Identification of energy related enterprises that represent the breath of the industry and prioritizing these as candidates; Embodied energy analysis and use as a tool for measuring sustainability. Energy Audit of Facilities and optimization of energy consumption.</p> <p><b>Tutorials:</b> Draw a typical geometrical orientation of a house in your area to avoid sun's radiation in the bed room in the evening; Identify typical examples of Indian buildings having various LEED ratings; List various building materials with their embodied energy content. Do an Energy Audit of your Departmental Building in the college</p>		8L

	Addison-Wesley Publishing Company 10. Related papers published in international journals	
--	---	--

<b>CE(BS)302</b>	<b>Mathematics-III (Transform &amp; Discrete Mathematics)</b>	2L + 0T	2 Credits
(Prerequisite 2c, 5b-d, 6b)			
<b>Module 1</b>	<b>Transform Calculus -1</b> Polynomials – Orthogonal Polynomials – Lagrange’s, Chebysev Polynomials; Trigonometric Polynomials; Laplace Transform, Properties of Laplace Transform, Laplace transform of periodic functions. Finding inverse Laplace transform by different methods, convolution theorem. Evaluation of integrals by Laplace transform, solving ODEs and PDEs by Laplace Transform method.		6 L
<b>Module 2</b>	<b>Transform Calculus-2</b> Fourier transforms, Z-transform and Wavelet transforms: properties, methods, inverses and their applications.		6 L
<b>Module 3</b>	<b>Sets, relations and functions</b> Basic operations on sets, Cartesian products, disjoint union (sum), and power sets. Different types of relations, their compositions and inverses. Different types of functions, their compositions and inverses.		4 L
<b>Module 4</b>	<b>Propositional Logic</b> Syntax and semantics, proof systems, satisfiability, validity, soundness, completeness, deduction theorem, etc. Decision problems of propositional logic. Introduction to first order logic and first order theory.		4 L
<b>Module 5</b>	<b>Partially ordered sets</b> Complete partial ordering, chain, lattice, complete, distributive, modular and complemented lattices. Boolean and pseudo Boolean lattices.		4 L
<b>Module 6</b>	<b>Algebraic Structures</b> Algebraic structures with one binary operation – semigroup, monoid and group. Cosets, Lagrange’s theorem, normal subgroup, homomorphic subgroup. Congruence relation and quotient structures. Error correcting code. Algebraic structures with two binary operations- ring, integral domain, and field. Boolean algebra and boolean ring (Definitions and simple examples only).		4 L
<b>Module 7</b>	<b>Introduction to Counting</b> Basic counting techniques – inclusion and exclusion, pigeon-hole principle, permutation, combination, summations. Introduction to recurrence relation and generating functions.		3 L
<b>Module 8</b>	<b>Introduction to Graphs</b> Graphs and their basic properties – degree, path, cycle, subgraph, isomorphism, Eulerian and Hamiltonian walk, trees.		3 L

(Applicable from the academic session 2018-2019)

<b>CE(HS)301</b>	<b>Humanities-I (Effective Technical Communication)</b>	<b>3L + 0T</b>	<b>3 Credits</b>
<b>Module 1</b>	Information Design and Development- Different kinds of technical documents, Information development life cycle, Organization structures, factors affecting information and document design, Strategies for organization, Information design and writing for print and for online media.		4L
<b>Module 2</b>	Technical Writing, Grammar and Editing- Technical writing process, forms of discourse, Writing drafts and revising, Collaborative writing, creating indexes, technical writing style and language. Basics of grammar, study of advanced grammar, editing strategies to achieve appropriate technical style. Introduction to advanced technical communication, Usability, Human factors, Managing technical communication projects, time estimation, Single sourcing, Localization.		8L
<b>Module 3</b>	Self Development and Assessment- Self assessment, Awareness, Perception and Attitudes, Values and belief, Personal goal setting, career planning, Self-esteem. Managing Time; Personal memory, Rapid reading, Taking notes; Complex problem solving; Creativity		8L
<b>Module 4</b>	Communication and Technical Writing- Public speaking, Group discussion, Oral presentation, Interviews, Graphic presentation, Presentation aids, Personality Development. Writing reports, project proposals, brochures, newsletters, technical articles, manuals, official notes, business letters, memos, progress reports, minutes of meetings, event report.		8L
<b>Module 5</b>	Ethics- Business ethics, Etiquettes in social and office settings, Email etiquettes, Telephone Etiquettes, Engineering ethics, Managing time, Role and responsibility of engineer, Work culture in jobs, Personal memory, Rapid reading, Taking notes, Complex problem solving, Creativity.		8L

(Formerly West Bengal University of Technology)

**Syllabus for B. Tech in Civil Engineering**  
(Applicable from the academic session 2018-2019)

CE(HS)302	Introduction to Civil Engineering	1L + 1T=	2 Credits
<b>Module 1</b>	<b>Basic Understanding:</b> What is Civil Engineering/ Infrastructure? Basics of Engineering and Civil Engineering; Broad disciplines of Civil Engineering; Importance of Civil Engineering, Possible scopes for a career  <b>Tutorials</b> Develop a matrix of various disciplines and possible roles for engineers in each		1 L
<b>Module 2</b>	<b>History of Civil engineering:</b> Early constructions and developments over time; Ancient monuments & Modern marvels; Development of various materials of construction and methods of construction; Works of Eminent civil engineers  <b>Tutorials</b> Identify 10 ancient monuments and ten modern marvels and list the uniqueness of each		1 L
<b>Module 3</b>	<b>Overview of National Planning for Construction and Infrastructure Development;</b> Position of construction industry vis-à-vis other industries, five year plan outlays for construction; current budgets for infrastructure works  <b>Tutorials</b> Develop a Strategic Plan for Civil Engineering works for next ten years based on past investments and identify one typical on-going mega project in each area		1 L
<b>Module 4</b>	<b>Fundamentals of Architecture &amp; Town Planning:</b> Aesthetics in Civil Engineering, Examples of great architecture, fundamentals of architectural design & town planning; Building Systems (HVAC, Acoustics, Lighting, etc.); LEED ratings; Development of Smart cities  <b>Tutorials</b> Identify ten best civil engineering projects with high aesthetic appeal with one possible factor for each; List down the possible systems required for a typical Smart City		1 L
<b>Module 5</b>	<b>Fundamentals of Building Materials:</b> Stones, bricks, mortars, Plain, Reinforced & Prestressed Concrete, Construction Chemicals; Structural Steel, High Tensile Steel, Carbon Composites; Plastics in Construction; 3D printing; Recycling of Construction & Demolition wastes  <b>Tutorials</b> Identify three top new materials and their potential in construction; Visit a Concrete Lab and make a report		2 L
<b>Module 6</b>	<b>Basics of Construction Management &amp; Contracts Management:</b> Temporary Structures in Construction; Construction Methods for various types of Structures; Major Construction equipment; Automation & Robotics in Construction; Modern Project management Systems; Advent of Lean Construction; Importance of Contracts Management  <b>Tutorials</b> Identify 5 typical construction methods and list their advantages/ positive features		2 L
<b>Module 7</b>	<b>Environmental Engineering &amp; Sustainability:</b> Water treatment systems; Effluent treatment systems; Solid waste management; Sustainability in Construction  <b>Tutorials</b> Sustainability principles, Sustainable built environment, water treatment systems, and good practices of wastewater management. examples of Solid and hazardous waste management, Air pollution and control		2L
<b>Module 8</b>	<b>Geotechnical Engineering:</b> Basics of soil mechanics, rock mechanics and geology; various types of foundations; basics of rock mechanics & tunnelling  <b>Tutorials</b> List top five tunnel projects in India and their features; collect and study geotechnical investigation report of any one Metro Rail (underground) project; Visit a construction site and make a site visit report		2 L
<b>Module 9</b>	<b>Hydraulics, Hydrology &amp; Water Resources Engineering:</b> Fundamentals of fluid flow, basics of water supply systems; Underground Structures; Underground Structures Multi-purpose reservoir projects  <b>Tutorials</b> Identify three river interlinking projects and their features; visit a Hydraulics Lab and make a report		1 L
<b>Module 10</b>	<b>Ocean Engineering:</b> Basics of Wave and Current Systems; Sediment transport systems; Ports & Harbours and other marine structures  <b>Tutorials</b> Identify 5 typical ports in India and list the structures available in them; Visit a related/similar facility, if possible in nearby place and make a report		1 L
<b>Module 11</b>	<b>Power Plant Structures:</b> Chimneys, Natural & Induced Draught Cooling towers, coal handling		1 L

**Maulana Abul Kalam Azad University of Technology, West Bengal**  
*(Formerly West Bengal University of Technology)*  
**Syllabus for B. Tech in Civil Engineering**  
 (Applicable from the academic session 2018-2019)

	<p>systems, ash handling systems; nuclear containment structures; hydro power projects</p> <p><b>Tutorials</b> Collect the typical layout for a large thermal powerplant and a large hydro power plant and identify all the structures and systems falling in them.</p>	
<b>Module 12</b>	<p><b>Structural Engineering:</b> Types of buildings; tall structures; various types of bridges; Water retaining structures; Other structural systems; Experimental Stress Analysis; Wind tunnel studies;</p> <p><b>Tutorials</b> Identify 5 unique features for typical buildings, bridges, tall structures and large span structures; Visit Structures Testing Lab/facility and make a report</p>	3 L
<b>Module 13</b>	<p><b>Surveying &amp; Geomatics:</b> Traditional surveying techniques, Total Stations, Development of Digital Terrain Models; GPS, LIDAR;</p> <p><b>Tutorials</b> Collect visual representations prepared by a Total Station and LIDAR and compare; Study typical Google street map and Google Earth Map and study how each can facilitate the other</p>	1 L
<b>Module 14</b>	<p><b>Traffic &amp; Transportation Engineering:</b> Investments in transport infrastructure development in India for different modes of transport; Developments and challenges in integrated transport development in India: road, rail, port and harbour and airport sector; PPP in transport sector; Intelligent Transport Systems; Urban Public and Freight Transportation; Road Safety under heterogeneous traffic; Sustainable and resilient pavement materials, design, construction and management; Case studies and examples.</p> <p><b>Tutorials</b> Investments in transport infrastructure; Developments and challenges; Intelligent Transport Systems; Smart Cities, Urban Transport; Road Safety; Sustainable and resilient highway design principles; Plan a sustainable transport system for a city; Identify key features/components in the planning and design of a green field highway/airport/port/railway and the cost – economics.</p>	1 L
<b>Module 15</b>	<p><b>Repairs &amp; Rehabilitation of Structures:</b> Basics of corrosion phenomena and other structural distress mechanisms; some simple systems of rehabilitation of structures; Non-Destructive testing systems; Use of carbon fibre wrapping and carbon composites in repairs.</p> <p><b>Tutorials</b> Collect the history of a major rehabilitation project and list the interesting features</p>	1 L
<b>Module 16</b>	<p><b>Computational Methods, IT, IoT in Civil Engineering:</b> Typical software used in Civil Engineering- Finite Element Method, Computational Fluid Dynamics; Computational Geotechnical Methods; highway design (MX), Building Information Modelling; Highlighting typical available software systems (SAP, STAAD, ABAQUS, MATLAB, ETAB, NASTRAN, NISA, MIKE 21, MODFLOW, REVIT, TEKLA, AUTOCAD, ... GEOSTUDIO, EDUSHAKE, MSP, PRIMAVERA, ArcGIS, VisSIM, ...)</p> <p><b>Tutorials</b> Visit an AutoCad lab and prepare a report; Identify ten interesting software systems used in Civil Engg and their key features</p>	2 L
<b>Module 17</b>	<p><b>Industrial lectures:</b> Case studies of large civil engineering projects by industry professionals, covering comprehensive planning to commissioning;</p> <p><b>Tutorials</b> For each case study list the interesting features</p>	2 L
<b>Module 18</b>	<p><b>Basics of Professionalism:</b> Professional Ethics, Entrepreneurial possibilities in Civil Engineering, Possibilities for creative &amp; innovative working, Technical writing Skills enhancement; Facilities Management; Quality &amp; HSE Systems in Construction</p>	3 L
<b>Tutorials</b>	<p>List 5 cases of violation of professional ethics and list preventive measures; Identify 5 interesting projects and their positive features; Write 400 word reports on one ancient monument and a modern marvel of civil engineering</p>	5L

**LABORATORY/ SESSIONAL**

CE(ES)391	Basic Electronics	1L + 2P	2 Credits
<b>Theory</b>			
Module 1	Diodes and Applications covering, Semiconductor Diode - Ideal versus Practical, Resistance Levels, Diode Equivalent Circuits, Load Line Analysis; Diode as a Rectifier, Half Wave and Full Wave Rectifiers with and without Filters; Breakdown Mechanisms, Zener Diode – Operation and Applications; Opto-Electronic Devices – LEDs, Photo Diode and Applications; Silicon Controlled Rectifier (SCR) – Operation, Construction, Characteristics, Ratings, Applications;		4L
Module 2	Transistor Characteristics covering, Bipolar Junction Transistor (BJT) – Construction, Operation, Amplifying Action, Common Base, Common Emitter and Common Collector Configurations, Operating Point, Voltage Divider Bias Configuration; Field Effect Transistor (FET)– Construction, Characteristics of Junction FET, Depletion and Enhancement type Metal Oxide Semiconductor (MOS) FETs, Introduction to CMOS circuits;		4L
Module 3	Transistor Amplifiers and Oscillators covering, Classification, Small Signal Amplifiers – Basic Features, Common Emitter Amplifier, Coupling and Bypass Capacitors, Distortion, AC Equivalent Circuit; Feedback Amplifiers – Principle, Advantages of Negative Feedback, Topologies, Current Series and Voltage Series Feedback Amplifiers; Oscillators – Classification, RC Phase Shift, Wien Bridge, High Frequency LC and Non-Sinusoidal type Oscillators;		4L
Module 4	Operational Amplifiers and Applications covering, Introduction to Op-Amp, Differential Amplifier Configurations, CMRR, PSRR, Slew Rate; Block Diagram, Pin Configuration of 741 Op-Amp, Characteristics of Ideal OpAmp, Concept of Virtual Ground;		4L
<b>Practical</b>			
Module 1	Laboratory Sessions covering, Identification, Specifications, Testing of R, L, C Components (Colour Codes), Potentiometers, Switches (SPDT, DPDT and DIP), Bread Boards and Printed Circuit Boards (PCBs); Identification, Specifications, Testing of Active Devices – Diodes, BJTs, JFETs, MOSFETs, Power Transistors, SCRs and LEDs;		
Module 2	Study and Operation of Digital Multi Meter, Function / Signal Generator, Regulated Power Supply (RPS), Cathode Ray Oscilloscopes; Amplitude, Phase and Frequency of Sinusoidal Signals using Lissajous Patterns on CRO; (CRO);		
Module 3	Experimental Verification of PN Junction Diode Characteristics in A) Forward Bias B) Reverse Bias, Zener Diode Characteristics and Zener Diode as Voltage Regulator, Input and Output Characteristics of BJT in Common Emitter (CE) Configuration, Drain and Transfer Characteristics of JFET in Common Source (CS) Configuration;		
Module 4	Study of Half Wave and Full Wave Rectification, Regulation with Filters, Gain and Bandwidth of BJT Common Emitter (CE) Amplifier, Gain and Bandwidth of JFET Common		

**Maulana Abul Kalam Azad University of Technology, West Bengal**  
(Formerly West Bengal University of Technology)

**Syllabus for B. Tech in Civil Engineering**  
(Applicable from the academic session 2018-2019)

	Source(CS) Amplifier, Gain and Bandwidth of BJT Current Series and Voltage Series Feedback Amplifiers, Oscillation Frequency of BJT based RC Phase Shift, Hartley and Colpitts Oscillators;	
<b>Module 5</b>	Op-Amp Applications – Adder, Subtractor, Voltage Follower and Comparator; Op-Amp Applications – Differentiator and Integrator, Square Wave and Triangular Wave Generation, Applications of 555 Timer – Astable and Monostable Multivibrators;	
<b>Module 6</b>	Truth Tables and Functionality of Logic Gates – NOT, OR, AND, NOR, NAND, XOR and XNOR Integrated Circuits (ICs); Truth Tables and Functionality of Flip-Flops – SR, JK and D Flip-Flop ICs; Serial-In-Serial-Out and Serial-In-Parallel-Out Shift operations using 4-bit/8-bit Shift Register ICs; Functionality of Up-Down / Decade Counter ICs;

<b>CE(ES)392</b>	<b>Computer-aided Civil Engineering Drawing</b>	<b>1L + 2P</b>	<b>2 Credits</b>
<b>Module 1</b>	<b>INTRODUCTION</b> Introduction to concept of drawings, Interpretation of typical drawings, Planning drawings to show information concisely and comprehensively; optimal layout of drawings and Scales; Introduction to computer aided drawing, co-ordinate systems, reference planes. Commands: Initial settings, Drawing aids, Drawing basic entities, Modify commands, Layers, Text and Dimensioning, Blocks. Drawing presentation norms and standards.		2 L
<b>Module 2</b>	<b>SYMBOLS AND SIGN CONVENTIONS</b> Materials, Architectural, Structural, Electrical and Plumbing symbols. Rebar drawings and structural steel fabrication and connections drawings symbols, welding symbols; dimensioning standards		2 L
<b>Module 3</b>	<b>MASONRY BONDS</b> English Bond and Flemish Bond – Corner wall and Cross walls -One brick wall and one and half brick wall		1 L
<b>Module 4</b>	<b>BUILDING DRAWING</b> Terms, Elements of planning building drawing, Methods of making line drawing and detailed drawing. Site plan, floor plan, elevation and section drawing of small residential buildings. Foundation plan. Roof drainage plans. Depicting joinery, standard fittings & fixtures, finishes. Use of Notes to improve clarity		5 L
<b>Module 5</b>	<b>PICTORIAL VIEW</b> Principles of isometrics and perspective drawing. Perspective view of building. Fundamentals of Building Information Modelling (BIM)		2 L
<b>Drawings</b>			
1	Buildings with load bearing walls including details of doors and windows.		6P
2	Taking standard drawings of a typical two storeyed building including all MEP, joinery, rebars, finishing and other details and writing out a description of the Facility in about 500-700 words		4P
3	RCC framed structures		6P
4	Reinforcement drawings for typical slabs, beams, columns and spread footings		6P
5	Industrial buildings - North light roof structures – Trusses		4P
6	Perspective view of one and two storey buildings		4P

<b>CE(ES)393</b>	<b>Life Science</b>	<b>1L + 2P</b>	<b>2 Credits</b>
<b>Module 1A</b>	<b>Plant Physiology</b> Transpiration; Mineral nutrition		3 L
<b>Module 1B</b>	<b>Ecology</b> Ecosystems- Components, types, flow of matter and energy in anecosystem; Community ecology- Characteristics, frequency, life forms, and biological spectrum;Ecosystem structure- Biotic and a-biotic factors, food chain, food web, ecological pyramids;		3 L
<b>Module 2A</b>	<b>Population Dynamics</b> Population ecology- Population characteristics,ecotypes; Population genetics- Concept of gene pool and genetic diversity in populations,polymorphism and heterogeneity;		3 L
<b>Module 2B</b>	<b>Environmental Management</b> Principles: Perspectives, concerns andmanagement strategies; Policies and legal aspects- Environment Protection Acts and modification,International Treaties; Environmental Impact Assessment- Case studies (International Airport,thermal power plant);		3 L
<b>Module 3A</b>	<b>Molecular Genetics</b> Structures of DNA and RNA; Concept of Gene, Generegulation, e.g., Operon concept		3 L
<b>Module 3B</b>	<b>Biotechnology</b> Basic concepts: Totipotency and Cell manipulation; Plant &Animal tissue culture- Methods and uses in agriculture, medicine and health; Recombinant DNATEchnology- Techniques and applications		3 L
<b>Module 4</b>	<b>Biostatistics</b> Introduction to Biostatistics:-Terms used, types of data;Measures of Central Tendencies- Mean, Median, Mode, Normal and Skewed distributions; Analysisof Data- Hypothesis testing and ANNOVA (single factor)		4 L
<b>Module 5</b>	<b>Laboratory &amp; FieldworkSessions</b> Comparison of stomatal index in differentplants; Study of mineral crystals in plants; Determination of diversity indices in plant communities;To construct ecological pyramids of population sizes in an ecosystem; Determination of ImportanceValue Index of a species in a plant community; Seminar (with PPTs) on EIA of a Mega-Project (e.g.,Airport, Thermal/Nuclear Power Plant/ Oil spill scenario); Preparation and extraction of genomic DNA and determination of yield by UV absorbance; Isolation of Plasmid DNA and its separation byGel Electrophoresis; Data analysis using Bio-statistical tools;		<b>15 P</b>

**Semester IV [Second year]**

<b>CE(ES)401</b>	<b>Introduction to Fluid Mechanics</b>		<b>2L + 0T</b>	<b>2 Credits</b>
<b>Course Outcome</b>	On successful completion of this course, student should be able to: <ol style="list-style-type: none"> <li>1. define basic terms, values and laws in the areas of fluids properties, statics, kinematics and dynamics of fluids, and hydraulic design of pipe systems;</li> <li>2. describe methods of implementing fluid mechanics laws and phenomena while analyzing the operational parameters of hydraulic problems;</li> <li>3. practically apply tables and diagrams, and equations that define the associated laws;</li> <li>4. calculate and optimize operational parameters of hydraulic problems;</li> <li>5. explain the correlation between different operational parameters;</li> <li>6. select engineering approach to problem solving based on the acquired physics and mathematical knowledge.</li> </ol>			
<b>Prerequisite</b>	Introduction to Civil Engineering, Physics.			
<b>Module 1</b>	<b>Properties of fluids:</b> Fluid – definition, distinction between solid and fluid - Units and dimensions - Properties of fluids - density, specific weight, specific volume, specific gravity, viscosity, compressibility, vapour pressure, capillarity and surface tension.			3L
<b>Module 2</b>	<b>Fluid statics:</b> Pressure at a point, basic equation for pressure field, pressure variation in a fluid at rest- incompressible fluid, compressible fluid, absolute pressure, gauge pressure; pressure measurements by manometers – general, inclined, inverted, micro-manometer; pressure and forces on submerged planes and curved surfaces, centre of pressure, buoyancy and floatation, Stability of submerged and floating bodies, metacentric height.			4L
<b>Module 3:</b>	<b>Fluid Kinematics:</b> The velocity field, Eulerian and Lagrangian flow descriptions, concepts of: - one-, two- and three-dimensional flows, steady and unsteady flows, streamlines, streaklines, pathlines; The acceleration field; Control volume and system representation, Continuity Equation, Momentum Equation, Moment-of-momentum equation, applications to pipe bends.			6L
<b>Module 4:</b>	<b>Fluid Dynamics:</b> Application of Newton's Law along a streamline, Bernoulli Equation, Kinetic energy head, potential energy head and pressure energy head, total energy head, Pitot tube, Examples of use of Bernoulli Equation, measurement of flows - venturimeter, energy line and hydraulic grade line.			7L
<b>Module 5:</b>	<b>Dimensional Analysis:</b> Buckingham Pi Theorem, determination of Pi terms, correlation of experimental data, examples.			3L
<b>Module 6</b>	<b>Flow through Pipes:</b> Laminar flow, Reynolds number, critical velocity, turbulent flow, shear stress at pipe wall, velocity distribution, loss of head for laminar flow, Darcy-Weisbach Formula, friction factor, contraction and expansion head losses. Concept of boundary layer and its growth.			7L
<b>Module 7</b>	<b>Pipeline Systems:</b> Pipes in series, pipes in parallel, equivalent pipes, branching pipes, pipe networks.			7L
<b>Module 8</b>	<b>Hydraulic Machines:</b> Basics of hydraulic machines, specific speed of pumps and turbines.			3L
<b>Reference</b>	<b>Sl.</b>	<b>Book Name</b>	<b>Author</b>	<b>Publishing House</b>

(Formerly West Bengal University of Technology)

**Syllabus for B. Tech in Civil Engineering**  
(Applicable from the academic session 2018-2019)

<b>CE(ES)402</b>	<b>Introduction to Solid Mechanics</b>	2L + 0T	2 Credits	
<b>Course Outcome</b>	After going through this course, the students will be able to: <ol style="list-style-type: none"> <li>1. To identify the equilibrium conditions and elastic properties of axially loaded bars through stress-strain and force-displacement curves.</li> <li>2. To identify the principal plane and principal stresses through Mohr circle.</li> <li>3. To calculate the hoop and meridional stresses in thin cylinders and spherical shells.</li> <li>4. To identify different degrees of freedoms for support conditions like hinge, roller and fixed constraints.</li> <li>5. To calculate the bending moment, shear force and deflection of beams for uniformly distributed, concentrated, linearly varying and external concentrated moment.</li> <li>6. To calculate the member forces in a plane truss using Method of Joint and Method of Section.</li> <li>7. To identify torsional moment and twist on a circular shaft and calculate the shear stress.</li> <li>8. To know the concepts of strain energy due to axial load, bending and shear.</li> <li>9. To calculate the buckling load of columns using Euler's theory for different support constraints</li> </ol>			
<b>Prerequisite</b>	Engineering Mechanics (CE(ES)301), Basic Calculus			
<b>Module 1</b>	<b>Review of Basic Concepts of Stress and Strain:</b> Normal stress, Shear stress, Bearing stress, Normal strain, Shearing strain; Hooke's law; Poisson's ratio; Stress-strain diagram of ductile and brittle materials; Elastic limit; Ultimate stress; Yielding; Modulus of elasticity; Factor of safety, Beam Statics: Support reactions, concepts of redundancy, axial force, shear force and bending moment diagrams for concentrated, uniformly distributed, linearly varying load, concentrated moments in simply supported beams, cantilever and overhanging beams	6L		
<b>Module 2</b>	<b>Symmetric Beam Bending:</b> Basic kinematic assumption, moment of inertia, elastic flexure formulae and its application, Bending and shear stress for regular sections, shear centre	3L		
<b>Module 3:</b>	<b>Deflection of statically determinate beams:</b> Fundamental concepts: Elastic curve, moment Curvature relationship, governing differential equation, boundary conditions: Direct integration solution	4L		
<b>Module 4:</b>	<b>Analysis of determinate plane trusses:</b> Concepts of redundancy, Analysis by method of joints, method of sections	4L		
<b>Module 5:</b>	<b>Two Dimensional Stress Problems:</b> Principal stresses, maximum shear stresses, Mohr's circle of stresses, construction of Mohr's circle	3L		
<b>Module 6</b>	<b>Introduction to thin cylindrical &amp; spherical shells:</b> Hoop stress and meridional - stress and volumetric changes	3L		
<b>Module 7</b>	<b>Torsion:</b> Pure torsion, torsion of circular solid shaft and hollow shafts, torsional equation, torsional rigidity, closed coil helical; springs	4L		
<b>Module 8</b>	<b>Columns:</b> Fundamentals, criteria for stability in equilibrium, column buckling theory, Euler's load for columns with different end conditions, limitations of Euler's theory – problems, eccentric load and secant formulae.	3L

(Applicable from the academic session 2018-2019)

<b>CE(PC)401</b>	<b>Soil Mechanics – I</b>	<b>2L + 1T</b>	<b>3 Credits</b>
<b>Course Outcome</b>	<p>After going through this course, the students will be able to:</p> <ol style="list-style-type: none"> <li>1. Classify soil as per grain size distribution curve and understand the index properties of soil.</li> <li>2. Apply the concept of total stress, effective stress and pore water pressure for solving geotechnical problems.</li> <li>3. Assess the permeability of different types of soil and solve flow problems.</li> <li>4. Estimate the seepage loss, factor of safety against piping failure using flow net related to any hydraulic structure.</li> <li>5. Determine vertical stress on a horizontal plane within a soil mass subjected to different types of loading on the ground surface and also the maximum stressed zone or isobar below a loaded area.</li> <li>6. Apply the concept of shear strength to analyze different geotechnical problems and determine the shear strength parameters from lab and field tests.</li> </ol>		
<b>Prerequisite</b>	Engineering Mechanics		
<b>Module 1</b>	<p><b>PHYSICAL PROPERTIES OF SOILS:</b></p> <p><b>Soil Formation</b> Introduction, Origin of Soil, Formation and Types of soil, Formative classification, Typical Indian Soil, Some Special Types of Soils, Structure and Composition, Clay Mineralogy.</p> <p><b>Soil as a Three Phase System</b> Basic Definitions, Weight - Volume Relationship, Measurement of Physical Properties of Soil: Insitu Density, Moisture Content, Specific Gravity, Relative density, Functional Relationships.</p> <p><b>Index Properties of Soil</b> Introduction, Particle Size Distribution, Mechanical Analysis - Sieve Analysis, Sedimentation Analysis – Hydrometer and Pipette Methods. Consistency of Soil – Atterberg Limits, Different Indices, Discussion on Limits and Indices.</p> <p><b>Classification of Soil</b> Classification by Structure, Particle Size Classification, Textural System, PRA System (AASHTO Classification), Unified Classification System, As per IS Code Recommendation, Field Identification of Soil, Classification by Casagrande's Plasticity Chart.</p>	10L + 5T	
<b>Module 2</b>	<p><b>Soil Hydraulics</b> Modes of Occurrence of Water in Soil – Free Water, Held Water, Structural Water, Capillary Water, Gravitational Water, Adsorbed Water, Pore Water. Pore Water Pressure, Effective Pressure, Total Pressure, Effective Pressure under Different Conditions and in Different Cases of Flow through Soils, Critical Hydraulic Gradient, Quick Sand Condition.</p>	3L + 1T	
<b>Module 3:</b>	<p><b>Permeability</b> Introduction, Darcy's Law, Coefficient of Permeability, Discharge Velocity, Seepage Velocity, Factors Affecting Permeability. Determination of Coefficient of Permeability – Constant Head and Falling Head Methods, Permeability of Stratified Soil Deposits, Field Determination of Permeability – Unconfined and Confined Aquifers.</p>	3L + 1T	
<b>Module 4:</b>	<p><b>Seepage Analysis</b> Introduction, Seepage, Seepage Pressure, Two Dimensional Flow, Laplace's Equations, Continuity equation, Flow Nets, Flow through Earthen Dam, Estimation of Seepage, Construction, Properties and Use of Flow Nets, Piping and Heaving, Uplift due to Seepage, Design of Fillers.</p>	3L + 1T	
<b>Module 5:</b>	<p><b>STRESS DISTRIBUTION IN SOILS</b> Introduction, Geostatic Stress, Boussinesq's Equation, Determination of Stress due to Point Load, Vertical Stress Distribution on a Horizontal Plane, Isobar and Pressure Bulb, Vertical Stress Distribution on a Vertical Plane, Vertical Stress under Uniformly Loaded Circular Area, Vertical Stress Beneath a Corner of a Rectangular Area, Equivalent Point Load Method, 2:1 Method, Newmark's Influence Chart, Vertical Stress Beneath Line and Strip Loads. Westergaard Analysis, Comparison of Boussinesq and Westergaard Theories, Contact Pressure.</p>	4L + 2T	
<b>Module 6</b>	<p><b>SHEARING STRENGTH OF SOILS</b> Shear Strength of Soil Introduction, Basic Concept of Shear Resistance and Shear Strength of Soil, Mohr Circle of Stress, Sign Conventions, Mohr - Coulomb Theory, Relationship between Principal Stresses and Cohesion. Determination of Shear Parameters of Soil Stress Controlled and Strain Controlled Tests, Laboratory Determination of Soil Shear Parameters- Direct Shear Test, Triaxial Test, Classification of Shear Tests Based on Drainage Conditions, Unconfined Compression Test, Vane Shear Test as per Relevant IS Codes. Stress- Strain Relationship of Clays and Sands, Concept of Critical Void Ratio. Skempton's Pore Pressure Parameters. Sensitivity and Thixotropy of clay. Concept of Stress</p>	5L + 3T

CE(PC)402	Environmental Engineering – I	2L + 1T	3 Credits	
<b>Course Outcome</b>	After going through this course, the students will be able to: <ol style="list-style-type: none"> <li>1. Define the basic concepts and terminologies of water supply engineering and solid waste management</li> <li>2. Describe different surface and groundwater sources; and composition and characteristics of municipal solid waste</li> <li>3. Apply the methods of quantifying water requirement and MSW generation</li> <li>4. Solve different mathematical problems regarding different components of water supply systems, distribution networks and MSW management systems</li> <li>5. Compare between different water samples based on their physical, chemical and biological characteristics</li> <li>6. Design different unit processes and operations involved in water treatment and MSW management</li> </ol>			
<b>Prerequisite</b>	Class-XII level knowledge of Physics, Chemistry, Mathematics, Biology and Environmental Science; Undergraduate level knowledge of Engineering Mechanics, Fluid Mechanics and Hydraulics			
<b>Module 1</b>	<b>Water Requirement Estimation</b> Water Demand: Different types of water demand; Per capita demand; Variations in demand; Factors affecting water demand Future Demand Forecasting: Design period; Population forecasting methods	2L + 2T		
<b>Module 2</b>	<b>Sources of Water</b> Surface Water Sources; Ground Water Sources	4L + 2T		
<b>Module 3:</b>	<b>Water Quality</b> Water Quality Characteristics: Physical, Chemical, and Biological parameters Drinking Water Standards: BIS; WHO; USEPA Water Quality Indices: Basic concept and examples	4L + 2T		
<b>Module 4:</b>	<b>Water Treatment</b> Typical flow chart for surface and groundwater treatments Unit Operation and Processes: Aeration, Plain Sedimentation, Sedimentation with Coagulation and Flocculation, Water Softening, Filtration, Disinfection	9L + 3T		
<b>Module 5:</b>	<b>Water Conveyance and Distribution</b> Hydraulic design of pressure pipes; Analysis of distribution network; Storage and distribution reservoirs; Capacity of reservoirs.	4L + 2T		
<b>Module 6</b>	<b>Characteristics of Municipal Solid Waste (MSW)</b> Composition and characteristics of MSW	1L + 1T		
<b>Module 7</b>	<b>Handling of MSW</b> Generation, collection and transportation of MSW	1L + 1T		
<b>Module 8</b>	<b>Engineered Systems for MSW Management</b> Methods of reuse/ recycle, energy recovery, treatment and disposal of MSW	3L + 1T

	5	Manual on Municipal Solid Waste Management.	CPHEEO	Govt. of India

CE(PC)403	Surveying & Geomatics	2L + 1T	3 Credits	
<b>Course Outcome</b>	Upon completing the course, the students will be able to: <ol style="list-style-type: none"> <li>1. Define and state the scope of surveying and geomatics in civil engineering</li> <li>2. Understand the basic principles of surveying and geomatics engineering</li> <li>3. Apply the different methods of surveying and geomatics to measure the features of interest</li> <li>4. Analyze the traditional and advanced methods of surveying</li> <li>5. Evaluate the different techniques of surveying and geomatics in solving real world problems.</li> <li>6. Design and construct solutions for real world problems related to surveying and geomatics.</li> </ol>			
<b>Prerequisite</b>	Knowledge of Mathematics and Physics in Class-XII			
<b>Module 1</b>	<b>Principles of Surveying:</b> Introduction, Principles and classification of surveying; Concept of scales; Survey stations and lines – ranging and bearing; Chain surveying – Concept, Instruments, numerical problems on errors due to incorrect chain; Plane table surveying – Advantages, disadvantages, parts, methods; Elements of simple and compound curves.	4L + 2T		
<b>Module 2</b>	<b>Levelling:</b> Levelling – Principles, Precautions and Difficulties; Differential levelling, -- Concepts and numerical problems; Contouring.	3L + 1T		
<b>Module 3:</b>	<b>Triangulation and Trilateration:</b> Theodolite survey – Instruments, measurements of horizontal and vertical angles; Triangulation – Network, signals, numerical examples; Baseline measurement – site selection, measuring equipments, numerical problems on baseline corrections; Trigonometric levelling – Axis signal correction.	4L + 2T		
<b>Module 4:</b>	<b>Advanced Surveying:</b> Principle of Electronic Distance Measurement (EDM); Types of EDM instruments; Distomats; Total Station – Parts, advantages, applications, field procedure and errors; Global Positioning System (GPS) – Concept, applications, segments, location determination, errors; Principle of Differential GPS; Terrestrial laser scanner.	3L + 2T		
<b>Module 5:</b>	<b>Photogrammetric Surveying:</b> Concept; Classification of photogrammetric surveying – terrestrial, aerial and satellite; scale of a vertical photograph; relief displacement and object height determination; Stereoscopic vision – depth perception, parallax angle, stereoscopes; Object height determination using parallax; Parallax bar; Flight planning – Concept and numerical problems; Photo mosaic; Orthophotography; Stereoscopic plotting instruments.	4L + 2T		
<b>Module 6</b>	<b>Remote Sensing:</b> Energy sources and radiation principles; Concept of Electromagnetic Spectrum; Energy interactions in the atmosphere and earth surface features; Data acquisition and interpretation; Platforms and sensors – Geostationary and sun-synchronous orbits, pushbroom and whiskbroom scanning system, characteristics of IRS, Landsat and Sentinel sensors; Visual image interpretation	3L + 2T		
<b>Module 7</b>	<b>Digital Image Processing:</b> Concept; Image rectification and restoration; Image enhancement; Image classification; Accuracy assessment and post classification smoothing.	4L + 2T		
<b>Module 8</b>	<b>Applications of Geomatics in Civil Engineering:</b> 3D mapping; Earthquake and landslides; Runoff modelling; Groundwater targeting; Flood risk assessment; Urban planning; Highway and transportation	3L + 1T

<b>CE(PC)404</b>	<b>Concrete Technology</b>	<b>2L + 1T</b>	<b>3 Credits</b>	
<b>Course Outcome</b>	On completion of the course, the students will be able to: <ol style="list-style-type: none"> <li>test all the required properties of concrete materials as per IS code.</li> <li>compute the properties of concrete at fresh and hardened state.</li> <li>design the concrete mix as per latest IS code methods.</li> <li>ensure quality control while testing/ sampling.</li> <li>Design the special type of concrete for specific application purposes.</li> <li>Use the admixture as per requirement.</li> </ol>			
<b>Prerequisite</b>	Introduction to Civil Engineering CE(HS)302, Chemistry BS-CH101.			
<b>Module 1</b>	<b>Cement:</b> Manufacturing of cement, Oxides composition of cement and the calculation of compounds, Heat of hydration, Types of cement-OPC, RPC. Low heat cement, PPC, PSC, Sulphate resisting cement, High Alumina cement, Expansive cement, White cement; Test on cement- fineness, consistency, initial setting time & final setting time, soundness test, strength test, specific gravity of cement, storage of cement.	5L + 3T		
<b>Module 2</b>	<b>Aggregates:</b> Classification, Grading, alkali-aggregate reaction, deleterious substances in aggregates, physical properties, testing of aggregates- fineness modulus, bulking, specific gravity, sieve analysis, flakiness & elongation index. Quality of Water for mixing and curing - use of sea water for mixing concrete.	3L + 1T		
<b>Module 3:</b>	<b>Properties of fresh concrete:</b> Workability, factors affecting workability, segregation and bleeding, tests on workability- slump test, compacting factor test, vee-bee test, flow table test.	3L + 1T		
<b>Module 4:</b>	<b>Properties of Hardened concrete:</b> Tensile & compressive strength, flexural strength, stress-strain characteristics, modulus of elasticity, poisson's ratio, Creep, shrinkage, permeability of concrete, micro cracking of concrete.	3L + 1T		
<b>Module 5:</b>	<b>Strength of concrete:</b> curing methods, water-cement ratio, gel-space ratio, maturity of concrete,	3L + 1T		
<b>Module 6</b>	<b>Admixtures:</b> types, uses, superplasticizers, plasticizers, Bonding admixtures.	2L + 1T		
<b>Module 7</b>	<b>Mix Design</b> – Objective, factors influencing mix proportion - Mix design by I.S. 10262-2019. (with & without admixture)	3L + 1T		
<b>Module 8</b>	<b>Non-destructive test:</b> Rebound hammer and Ultra-sonic pulse velocity testing methods. Quality control - Sampling and testing, Acceptance criteria.	3L + 1T		
<b>Module 9</b>	<b>Special Concrete</b> – Ferrocement - Fibre reinforced concrete - Polymer concrete - Sulphur Concrete - Self compacting concrete. Ready mix concrete, Batching plant.	4L + 1T

<b>CE(HS)401</b>	<b>Civil Engineering – Societal and Global Impact</b>	<b>2L + 0T</b>	<b>2 Credits</b>
<b>Course Outcome</b>	On completion of the course, the students will be able to: <ol style="list-style-type: none"> <li>The impact which Civil Engineering projects have on the Society at large and on the global arena and using resources efficiently and effectively.</li> <li>The extent of Infrastructure, its requirements for energy and how they are met: past, present and future</li> <li>The Sustainability of the Environment, including its Aesthetics,</li> <li>The potentials of Civil Engineering for Employment creation and its Contribution to the GDP</li> <li>The Built Environment and factors impacting the Quality of Life</li> <li>The precautions to be taken to ensure that the above-mentioned impacts are not adverse but beneficial.</li> <li>Applying professional and responsible judgement and take a leadership role;</li> </ol>		

**Maulana Abul Kalam Azad University of Technology, West Bengal**  
(Formerly West Bengal University of Technology)

**Syllabus for B. Tech in Civil Engineering**  
(Applicable from the academic session 2018-2019)

Prerequisite				
<b>Module 1</b>	<b>Introduction</b> to Course and Overview; Understanding the past to look into the future: Preindustrial revolution days, Agricultural revolution, first and second industrial revolutions, IT revolution; Recent major Civil Engineering breakthroughs and innovations; Present day world and future projections, Ecosystems in Society and in Nature; the steady erosion in Sustainability; Global warming, its impact and possible causes; Evaluating future requirements for various resources; GIS and applications for monitoring systems; Human Development Index and Ecological Footprint of India Vs other countries and analysis;			3L
<b>Module 2</b>	<b>Understanding the importance of Civil Engineering</b> in shaping and impacting the world; The ancient and modern Marvels and Wonders in the field of Civil Engineering; <b>Future Vision for Civil Engineering</b>			3L
<b>Module 3:</b>	<b>Infrastructure</b> - Habitats, Megacities, Smart Cities, futuristic visions; Transportation (Roads, Railways & Metros, Airports, Seaports, River ways, Sea canals, Tunnels (below ground, under water); Futuristic systems (ex, Hyper Loop)); Energy generation (Hydro, Solar (Photovoltaic, Solar Chimney), Wind, Wave, Tidal, Geothermal, Thermal energy); Water provisioning; Telecommunication needs (towers, above-ground and underground cabling); Awareness of various Codes & Standards governing Infrastructure development; <b>Innovations and methodologies for ensuring Sustainability;</b>			8L
<b>Module 4:</b>	<b>Environment</b> -Traditional & futuristic methods; Solid waste management, Water purification, Wastewater treatment & Recycling, Hazardous waste treatment; Flood control (Dams, Canals, River interlinking), Multi-purpose water projects, Atmospheric pollution; Global warming phenomena and Pollution Mitigation measures, Stationarity and non-stationarity; Environmental Metrics & Monitoring; Other Sustainability measures; <b>Innovations and methodologies for ensuring Sustainability.</b>			7L
<b>Module 5:</b>	<b>Built environment</b> –Facilities management, Climate control; Energy efficient built environments and LEED ratings, Recycling, Temperature/ Sound control in built environment, Security systems; Intelligent/ Smart Buildings; Aesthetics of built environment, Role of Urban Arts Commissions; Conservation, Repairs & Rehabilitation of Structures & Heritage structures; <b>Innovations and methodologies for ensuring Sustainability</b>			5L
<b>Module 6</b>	<b>Civil Engineering Projects</b> – Environmental Impact Analysis procedures; Waste (materials, manpower, equipment) avoidance/ Efficiency increase; Advanced construction techniques for better sustainability; Techniques for reduction of Green House Gas emissions in various aspects of Civil Engineering Projects; New Project Management paradigms & Systems (Ex. Lean Construction), contribution of Civil Engineering to GDP, Contribution to employment(projects, facilities management), Quality of products, Health & Safety aspects for stakeholders; <b>Innovations and methodologies for ensuring Sustainability during Project development</b>			4L

<b>CE(MC)401</b>	<b>Management – I (Organizational Behaviour)</b>	2L + 0T	2 Credits
<b>Module 1</b>	Introduction to Organizational Behaviour-Concept, Importance, Challenges and Opportunities Personality-Meaning of Personality, Personality Determinants and Traits, Psychoanalytic Theory, Argyris Immaturity to Maturity Continuum Impact on organization. Attitude-Concept, Components, Cognitive Dissonance Theory, Attitude Surveys.		5L
<b>Module 2</b>	Perception- Concept, Nature and Importance, Process of Perception, Factors influencing perception, Perceptual Selectivity, Shortcuts to Judge Others: Halo		6L

**Maulana Abul Kalam Azad University of Technology, West Bengal**  
(Formerly West Bengal University of Technology)

**Syllabus for B. Tech in Civil Engineering**  
(Applicable from the academic session 2018-2019)

	Effect, Stereotyping, Projection and Contrast Effects, Impact on Organization. Motivation-Definition, Theories of Motivation-Maslow's Hierarchy of Needs Theory, McGregor's Theory X&Y, Herzberg's Motivation-Hygiene Theory, Alderfer's ERG Theory, McClelland's Theory of Needs, Vroom's Expectancy Theory.	
<b>Module 3:</b>	Leadership-Concept, Leadership Styles, Theories-Behavioural Theory: Ohio Studies, Michigan Studies, Blake & Mouton Managerial Grid; Contingency Theory: Fielder Theory. Group Behaviour: Definition, Characteristics of Group, Types of Groups: Formal & Informal; Stages of Group Development, Group Decision making, Group Decision Making Vs Individual Decision Making.	8L
<b>Module 4:</b>	Organizational Design-Variou organizational structures and their pros and cons. Concepts of organizational climate and culture, Organizational Politics-Concept, Factors influencing degree of Politics Conflict management- Concept, Sources of conflict, Stages of conflict process, Conflict resolution techniques, Tools-Johari Window to analyse and reduce interpersonal conflict, Impact on organization.	5L

<b>CE(ES)491</b>	<b>Fluid Mechanics Laboratory</b>	<b>2P</b>	<b>1 Credits</b>
<b>Course Outcome</b>	On completion of the course, the students will be able to: <ol style="list-style-type: none"> <li>1. Calibrate the notch and orifice meter.</li> <li>2. Evaluate the performance of pump and turbine.</li> <li>3. Determine the various hydraulic coefficients.</li> <li>4. Determine the minor losses through pipes.</li> <li>5. Measure the water surface profile due to formation of hydraulic jump.</li> <li>6. Measure the water surface profile for flow over Broad crested weir.</li> </ol>		
<b>Prerequisite</b>	Introduction to Fluid Mechanics CE(ES)401		
<b>Experiment 1</b>	Calibration of Notches		
<b>Experiment 2</b>	Calibration of Orifice meter		
<b>Experiment 3</b>	Determination of Hydraulic Coefficient of an Orifice		
<b>Experiment 4</b>	Performance Test on Centrifugal Pump		
<b>Experiment 5</b>	Performance Test on Reciprocating Pump		
<b>Experiment 6</b>	Determination of Minor Losses in Pipes due to Sudden Enlargement and Sudden Contraction		
<b>Experiment 7</b>	Performance Test on Pelton Wheel Turbine		
<b>Experiment 8</b>	Measurement of water surface profile for flow over Broad crested weir		
<b>Experiment 9</b>	Measurement of water surface profile for a hydraulic jump		

<b>CE(ES)492</b>	<b>Solid Mechanics Laboratory</b>	<b>2P</b>	<b>1 Credits</b>
<b>Course Outcome</b>	After going through this course, the students will be able to: <ol style="list-style-type: none"> <li>1. Demonstrate the method and findings of tension and compression tests on ductile and brittle materials.</li> <li>2. Explain the method of bending tests on mild steel beam and concrete beam.</li> <li>3. Demonstrate the method and findings of Torsion test on mild steel circular bar and concrete beam.</li> <li>4. Illustrate the concept of hardness and explain the procedure and findings of Brinnel and Rockwell tests.</li> <li>5. Demonstrate the concept and procedure of calculation of spring constant and elaborate its use in Civil Engineering.</li> <li>6. Demonstrate the method and findings of Izod and Charpy impact tests.</li> <li>7. Understand the concepts of fatigue test.</li> </ol>		
<b>Prerequisite</b>	Introduction to Solid Mechanics (CE(ES)402)		

**Maulana Abul Kalam Azad University of Technology, West Bengal**  
*(Formerly West Bengal University of Technology)*  
**Syllabus for B. Tech in Civil Engineering**  
 (Applicable from the academic session 2018-2019)

<b>Experiment 1</b>	Tension test on Structural Materials: Mild Steel and Tor steel (HYSD bars)
<b>Experiment 2</b>	Compression Test on Structural Materials: Timber, bricks and concrete cubes
<b>Experiment 3</b>	Bending Test on Mild Steel
<b>Experiment 4</b>	Torsion Test on Mild Steel Circular Bar
<b>Experiment 5</b>	Hardness Tests on Ferrous and Non-Ferrous Metals: Brinell and Rockwell Tests
<b>Experiment 6</b>	Test on closely coiled helical spring
<b>Experiment 7</b>	Impact Test: Izod and Charpy
<b>Experiment 8</b>	Demonstration of Fatigue Test

<b>CE(ES)493</b>	<b>Engineering Geology Laboratory</b>	<b>2P</b>	<b>1 Credits</b>
<b>Course Outcome</b>	Upon completion of the course, the students will be able to: <ol style="list-style-type: none"> <li>1. Define and state the role of engineering geology in civil engineering</li> <li>2. Understand origin of rocks and geologic structures</li> <li>3. Apply different tools to identify rocks and minerals in hand specimen and under microscope</li> <li>4. Analyze the geological structures through drawing the cross sections from the geological maps</li> <li>5. Evaluate the results obtained from different geological experiments</li> <li>6. Investigate the natural hazards/disasters that are caused by the geological reasons</li> </ol>		
<b>Prerequisite</b>	Knowledge of basic physics and chemistry		
<b>Experiment 1</b>	Identification of minerals in hand specimen		
<b>Experiment 2</b>	Identification of igneous rocks in hand specimen		
<b>Experiment 3</b>	Identification of sedimentary rocks in hand specimen		
<b>Experiment 4</b>	Identification of metamorphic rocks in hand specimen		
<b>Experiment 5</b>	Study of crystals with the help of crystal models		
<b>Experiment 6</b>	Study of geologic structures with the help of models		
<b>Experiment 7</b>	Interpretation of geological maps: horizontal, vertical, unclinal, folded and faulted structures		
<b>Experiment 8</b>	Microscopic study of rocks and minerals		

<b>CE(PC)493</b>	<b>Surveying &amp; Geomatics Laboratory</b>	<b>2P</b>	<b>1 Credits</b>
<b>Course Outcome</b>	Upon completion of the course, the students will be able to: <ol style="list-style-type: none"> <li>1. State the interdependency and advancement of different surveying methods</li> <li>2. Comprehend the working principles of different surveying and geomatics instruments and experiments</li> <li>3. Execute the different methods of surveying and geomatics to measure the features of interest</li> <li>4. Examine the results obtained from the surveying and geomatics experiments</li> <li>5. Critically appraise the different techniques of surveying and geomatics in measuring and assessing the features of interest</li> <li>6. Design and construct solutions for real world problems related to surveying and geomatics.</li> </ol>		
<b>Prerequisite</b>	Surveying & Geomatics [CE(PC)403]		
<b>Experiment 1</b>	Traverse survey by Prismatic Compass: Procedure; Computation and checks on closed traverse; Preparation of field book; Plotting the traverse; Sources of errors.		
<b>Experiment 2</b>	Theodolite Survey: Closed traverse by transit theodolite, Preparation of field book		
<b>Experiment 3</b>	Differential Levelling using Dumpy level: Collimation and Rise and Fall methods, Field book preparation		
<b>Experiment 4</b>	Total Station Survey: Traversing and Levelling		
<b>Experiment 5</b>	Visual Image Interpretation		
<b>Experiment 6</b>	Satellite Image Pre-processing		
<b>Experiment 7</b>	Digital Image Classification and Accuracy Assessment		
<b>Experiment 8</b>	Stereoscopic fusion of aerial photographs using mirror stereoscope		

**Maulana Abul Kalam Azad University of Technology, West Bengal**  
(Formerly West Bengal University of Technology)

**Syllabus for B. Tech in Civil Engineering**  
(Applicable from the academic session 2018-2019)

<b>CE(PC)494</b>	<b>Concrete Technology Laboratory</b>	<b>2P</b>	<b>1 Credits</b>
<b>Course Outcome</b>	On completion of the course, the students will be able to: <ol style="list-style-type: none"> <li>1. Demonstrate the method and findings of tension and compression tests on concrete.</li> <li>2. Understand the concepts of different test on hardened concrete.</li> <li>3. Calculate the specific gravity of concrete ingredients.</li> <li>4. Find out the mix proportion of high grade of concrete.</li> <li>5. Measure the workability of concrete mix.</li> <li>6. Know about the quality of concrete.</li> <li>7. Understand the different properties of cement.</li> </ol>		
<b>Prerequisite</b>	Concrete Technology CE(PC)404		
<b>Test on Fine aggregates</b>	Bulking, Specific gravity, Bulk Density, Percentage voids, Fineness Modulus. Grading curve.		
<b>Test on Coarse aggregates</b>	Specific gravity, Bulk Density, Percentage voids, Fineness Modulus. Grading curve.		
<b>Test on Cement</b>	Normal consistency, fineness, Initial setting and final setting time of cement. Specific gravity, soundness and Compressive strength of Cement.		
<b>Test on Fresh Concrete</b>	Concrete mix design, Various workability tests – slump, compacting factor, vee-bee test.		
<b>Test on Hardened Concrete</b>	Split-tensile strength test, Flexure test, NDT Tests (Rebound hammer and Ultra-sonic pulse velocity), Poission ratio.		

**Semester V [Third year]**

<b>CE(PC)501</b>	<b>Design of RC Structures</b>	<b>2L + 1T</b>	<b>3 Credits</b>
<b>Course Outcome</b>	After going through this course, the students will be able to: <ol style="list-style-type: none"> <li>1. Understand material properties and design methodologies for reinforced concrete structures.</li> <li>2. Assess different type of loads and prepare layout for reinforced concrete structures.</li> <li>3. Identify and apply the applicable industrial design codes relevant to the design of reinforced concrete members.</li> <li>4. Analyse and design various structural elements of reinforced concrete building like beam, slab, column, footing, and staircase.</li> <li>5. Assessment of serviceability criteria for reinforced concrete beam and slab.</li> <li>6. Prepare structural drawings and detailing and produce design calculations and drawing in appropriate professional format.</li> </ol>		
<b>Prerequisite</b>	Introduction to Solid Mechanics (CE(ES)402), Concrete Technology (CE(PC)404).		
<b>Module 1:</b>	<b>Introduction:</b> Principles of design of reinforced concrete members - Working stress and Limit State method of design	1L	
<b>Module 2:</b>	<b>Working stress method of design:</b> Basic concepts and IS code provisions (IS: 456 2000)for design against bending moment and shear forces - Balanced, under reinforced and overreinforced beam/ slab sections; design of singly and doubly reinforced sections	2L+2T	
<b>Module 3:</b>	<b>Limit state method of design:</b> Basic concepts and IS code provisions (IS: 456 2000) for design against bending moment and shear forces; concepts of bond stress and development length; Use of 'design aids for reinforced concrete' (SP:16).	5L+2T	
<b>Module 4:</b>	<b>Beam Design by LSM:</b> Analysis, design and detailing of singly reinforced rectangular, 'T', 'L' and doubly reinforced beam sections by limit state method.	3L+2T	
<b>Module 5:</b>	<b>Slab Design by LSM :</b> Design and detailing of one-way and two-way slab panels as per IS code provisions	2L+1T	
<b>Module 6:</b>	<b>Continuous slab and beam design by LSM:</b> Design and detailing of continuous beams and slabs as per IS code provisions	2L+1T	
<b>Module 7:</b>	<b>Design of Staircases by LSM:</b> Types; Design and detailing of reinforced concrete doglegged staircase	3L+1T	
<b>Module 8</b>	<b>Design of Columns by LSM:</b> Design and detailing of reinforced concrete short columns of rectangular and circular crosssections under axial load. Design of short columns subjected to axial load with moments (uniaxial and biaxial bending) – using SP 16.	4L+1T	
<b>Module 9</b>	<b>Design of Foundation by LSM:</b> Design and detailing of reinforced concrete isolated square and rectangular isolated and combined footing for columns as per IS code provisions by limit state method Design and detailing of Pile foundation as per IS code provisions.	6L+2T	
<b>IS Codes</b>	<ol style="list-style-type: none"> <li>1 IS: 456 - 2000</li> <li>2 IS 875 – I (1987), II (1987), -III (2015), -IV(1987), V (1987)</li> <li>3 SP: 16 Design Aid to IS 456</li> </ol>

CE(PC)502	Engineering Hydrology	3L + 0T	3 Credits	
<b>Course Outcome</b>	On completion of the course, the students will be able to: <b>10.</b> study the source, occurrence, movement and distribution of water which is a prime resource for development of a nation. <b>11.</b> learn about the functioning of reservoirs and estimation of storage capacities. <b>12.</b> learn about flood hazards, estimation of design floods for various structures and methods of estimating effects of passage of floods through rivers and reservoirs. <b>13.</b> know the basic principles of measurement of flow in rivers.			
<b>Prerequisite</b>	Introduction to Civil Engineering CE(HS)302, CE(ES)401_Fluid Mechanics, Chemistry BS-CH101, Physics BS-PH101.			
<b>Module 1</b>	Hydrology: Hydrologic Cycle, Global Water Budget, India's Water Budget.		1L	
<b>Module 2</b>	Catchment: Definition & Descriptions, Various Types of Catchment, Factors Characterizing a Catchment, Delineation of Catchment Boundary.		2L	
<b>Module 3:</b>	Measurement of Precipitation: Precipitation, Description and Functioning of Various Types of Rain gauges, Rain gauge Network- Codal Provisions, Optimum Number of Raingauge Stations.		2L	
<b>Module 4:</b>	Processing of Rainfall Data: Normal Rainfall, Estimation of Missing Rainfall Data, Test for Consistency of Record; Mass Curve of Rainfall, Hyetograph, Point Rainfall; Mean Precipitation over an Area– Arithmetic Mean, Thiessen Polygon and Isohyetal Method.		4L	
<b>Module 5:</b>	Losses from Precipitation: Evaporation – Evaporation Process, Factors affecting Evaporation, Measurement of Evaporation– Description and Functioning of Pan Evaporimeter, Pan Coefficient, Evapotranspiration: AET, PET, Measurement of ET, Estimation of ET–Blaney Criddle Formulae; Infiltration– Process, Factors Affecting Infiltration, Infiltration Rate and Infiltration Capacity, Measurement of Infiltration, Infiltration Equations, Infiltration Indices.		6L	
<b>Module 6</b>	Streamflow Measurement: Importance, Direct and Indirect Methods, Measurement of Stage– Various Gauges and Recorders, Measurement of Velocity–Current Meters, their Functioning and Calibration; Velocity Distribution, Floats; Streamflow Computation– Area-Velocity Method, Moving Boat Method, Dilution Technique, Electromagnetic Method, Ultrasonic Method; Indirect Methods– Flow Measuring Structures, Slope Area Method; Stage-Discharge Relation, Permanent Control, Stage for Zero Discharge, Shifting Control– Backwater Effect, Unsteady Flow Effect, Extension of the Rating Curve.		12L	
<b>Module 7</b>	Runoff: Description of the Process, Components of Runoff, Factors Affecting Runoff, Characteristics of Streams, Rainfall Runoff Relationships. Hydrographs: Types, Base Flow Separation, Effective Rainfall.		2L	
<b>Module 8</b>	Unit Hydrograph– Definition, Assumptions, Applications– Derivation of Unit Hydrograph, Distribution Graph, Unit Hydrograph of Different Durations– Method of Superposition and S-Curve.		4L	
<b>Module 9</b>	Floods: Concept of flood as a natural hazard; Estimation of flood discharge in a river – rational method, empirical formulae, unit hydrograph method; flood frequency studies – return period.		2L	
<b>Module 10</b>	Flood Routing: Concept of flood routing in channels and through a reservoir, basic routing equations; reservoir routing – Modified Pul's method; channel routing – Muskingum method.		5L

<b>CE(PC)503</b>	<b>Structural Analysis – I</b>	2L + 1T	3 Credits	
<b>Course Outcome</b>	After going through this course, the students will be able to: <ol style="list-style-type: none"> <li>1. Distinguish between stable and unstable and statically determinate and indeterminate structures.</li> <li>2. Apply equations of equilibrium to structures and compute the reactions.</li> <li>3. Calculate the internal forces in cable and arch type structures.</li> <li>4. Evaluate and draw the influence lines for reactions, shears and bending moments in beams due to moving loads.</li> <li>5. Use approximate methods for analysis of statically indeterminate structures.</li> <li>6. Calculate the deflections of truss structures and beams.</li> </ol>			
<b>Prerequisite</b>	Introduction to Solid Mechanics (CE(ES)402)			
<b>Module 1</b>	<b>Basics of Structural Analysis:</b> Concept of static and kinematic indeterminacy, Determination of degree of indeterminacy for different types of structures. Theorem of minimum potential energy, law of conservation energy, principle of virtual work, the first and second theorems of Castiglano, Betti's law, Clark Maxwell's theorem of reciprocal deflection	3L+1T		
<b>Module 2</b>	<b>Analysis of Determinate Structures:</b> Portal Frames, Three hinged arches, Cables	3L+2T		
<b>Module 3</b>	<b>Deflection of Determinate Structures:</b> Energy methods. Unit Load method for beams, Deflection of trusses and Simple Portal Frames.	3L+2T		
<b>Module 4</b>	<b>Influence Line Diagram:</b> Statically determinate beams and trusses under series of concentrated and uniformly distributed rolling loads, criteria for maximum and absolute maximum moments and shear.	6L+3T		
<b>Module 5</b>	<b>Analysis of Statically Indeterminate Beams:</b> Theorem of three moments, Energy methods, Force method (Method of consistent deformation) [For analysis of propped cantilever, fixed beams and continuous beams (maximum two degree of indeterminacy) for simple loading case], Analysis of two hinged arch.	8L+4T		
<b>Module 6</b>	<b>Influence Line Diagram for Indeterminate Structures:</b> Muller – Breslau principle.	3L+2T

<b>CE(PC)504</b>	<b>Soil Mechanics – II</b>	2L + 1T	3 Credits
<b>Course Outcome</b>	After going through this course, the students will be able to: <ol style="list-style-type: none"> <li>1. Assess the compaction and consolidation characteristics of soil for solving geotechnical problems.</li> <li>2. Calculate earth pressure on rigid retaining walls on the basis of classical earth pressure theories.</li> <li>3. Analyze and design rigid retaining walls (cantilever types) from geotechnical engineering consideration.</li> <li>4. Evaluate the bearing capacity of shallow foundation by applying established theory.</li> <li>5. Estimate settlement in soils by different methods.</li> <li>6. Compute safety of dams and embankments on the basis of various methods of slope stability analysis.</li> </ol>		
<b>Prerequisite</b>	Soil Mechanics – I (CE(PC)401)		
<b>Module 1</b>	<b>Consolidation of Soil</b> Terzaghi's theory of one dimensional consolidation, Compressibility characteristics of soils, Compression index, Coefficient of compressibility and volume change, Coefficient of consolidation, Degree and rate of consolidation, Time factor, Settlement computation, Consolidometer and laboratory one dimensional consolidation test as per latest IS Code, Determination of consolidation parameters.	5L+3T	

**Maulana Abul Kalam Azad University of Technology, West Bengal**  
(Formerly West Bengal University of Technology)

**Syllabus for B. Tech in Civil Engineering**  
(Applicable from the academic session 2018-2019)

<b>Module 2</b>	<b>Compaction of Soil</b> Principles of compaction, Standard and modified proctor compaction test, Field compaction methods, Field compaction control, Factors affecting compaction, Effect of compaction on soil properties.	3L+1T		
<b>Module 3</b>	<b>Earth Pressure Theories</b> Plastic equilibrium of soil, Earth pressure at rest, Active and passive earth pressures, Rankine's and Coulomb's earth pressure theories, Different types of backfill, Wedge method of analysis. Analytical and graphical methods for determination of earth pressure against various earth retaining structures. <b>Stability of retaining walls:</b> Cantilever retaining wall.	7L+3T		
<b>Module 4</b>	<b>Bearing capacity of shallow foundations</b> Bearing capacity, Definition, Factors affecting bearing capacity, Modes of failures, Methods of determining bearing capacity of soils. Terzaghi's bearing capacity theory, Effect of depth of embedment, Eccentricity of load, Foundation shape on bearing capacity, Effect of 11 water table and eccentric loads. Isolated footings with combined action of loads and moments, Bearing capacity as per IS: 6403.	7L+4T		
<b>Module 5</b>	<b>Settlement</b> Allowable bearing pressure and settlement analysis (as per IS: 8009), Immediate and consolidation settlements, Rigidity and depth factor corrections, Settlement values as per IS: 1904 recommendations.	2L+1T		
<b>Module 6</b>	<b>Stability of slopes</b> Types of failure, Analysis of finite and infinite slopes, Swedish and friction circle method, Ordinary method of slices, Factor of safety, Taylor's stability number, Bishop's simplified method of stability analysis.	3L+2T		
<b>Reference</b>	<b>Sl.</b>	<b>Book Name</b>	<b>Author</b>	<b>Publishing House</b>
	1	Textbook of Soil Mechanics and Foundation Engineering (Geotechnical Engineering Series)	V.N.S. Murthy	CBS Publishers
	2	Soil Mechanics and Foundations	Punmia, B.C. and Jain A. K	Laxmi Publications (P) Ltd

4	Principles of Geotechnical Engineering	B.M. Das	Thomson Brooks / Cole	

<b>CE(PC)505</b>	<b>Environmental Engineering – II</b>	2L + 1T	3 Credits
<b>Course Outcome</b>	After going through this course, the students will be able to: <ol style="list-style-type: none"> <li>1. Define the basic concepts and terminologies of waste water engineering and hazardous waste management</li> <li>2. Describe different home plumbing systems for water supply and wastewater disposal</li> <li>3. Apply the methods of quantifying sanitary sewage and storm sewage</li> <li>4. Solve different mathematical problems regarding different components of sewerage system</li> <li>5. Compare between different wastewater samples based on their physical, chemical and biological characteristics</li> <li>6. Design different unit processes and operations involved in wastewater treatment</li> </ol>		
<b>Prerequisite</b>	Class-XII level knowledge of Physics, Chemistry, Mathematics, Biology and Environmental Science; Undergraduate level knowledge of Engineering Mechanics, Fluid Mechanics and Hydraulics; Environmental Engineering – I (CE(PC)402)		
<b>Module 1</b>	<b>Sewage and Drainage</b> Definition of Common Terms: Sewage or Sanitary Sewage, Drainage or Storm Sewage, Sullage, Black Water, Grey Water Sewerage Systems: Separate system, Combined System, Partially Separate System; applicability, advantages and disadvantages	1L+1T	
<b>Module 2</b>	<b>Sewage and Drainage Quantity</b> Quantity estimation for sanitary sewage; Quantity estimation for storm sewage	3L+1T	
<b>Module 3</b>	<b>Conveyance of Sewage</b> Sewers: Shapes; Design parameters; Operation and maintenance of sewers; Sewer appurtenances Hydraulic Design of Sewers: Partial flow diagrams and Nomograms	4L+2T	
<b>Module 4</b>	<b>Wastewater Characteristics</b> Physical, chemical and biological characteristics of municipal and domestic sewage; Effluent discharge standards	4L+2T	

**Maulana Abul Kalam Azad University of Technology, West Bengal**  
(Formerly West Bengal University of Technology)

**Syllabus for B. Tech in Civil Engineering**  
(Applicable from the academic session 2018-2019)

<b>Module 5</b>	<b>Wastewater Treatment</b> Primary, secondary and tertiary treatment of wastewater; aerobic and anaerobic treatment options Primary and Secondary Treatment of Domestic Wastewater: Typical Flow Chart of STP; Screen and Bar Racks; Grit Chamber; Primary and Secondary Sedimentation Tank; Activated Sludge Process; Trickling Filter			8L+4T
<b>Module 6</b>	<b>Sludge Handling and Disposal</b> Sludge Thickening; Sludge Digestion; Sludge Drying Bed			3L+1T
<b>Module 7</b>	<b>Building Plumbing</b> Introduction to various types of home plumbing systems for water supply and waste water disposal; high rise building plumbing; Pressure reducing valves; Break pressure tanks; Storage tanks; Building drainage for high rise buildings; various kinds of fixtures and fittings used			3L+1T
<b>Module 8</b>	<b>Hazardous waste</b> Types and nature of hazardous waste as per the HW Schedules of regulating authorities			3L+1T
<b>Reference</b>	<b>Sl.</b>	<b>Book Name</b>	<b>Author</b>	<b>Publishing House</b>
	1	Environmental Engineering. Volume-1 and Volume-2	Garg, S.K.	Khanna Publishers
	2	Environmental Engineering	Peavy, H.S, Rowe, D.R, Tchobanoglous, G	Tata McGraw Hill Indian Edition
	3	Introduction to Environmental Engineering and Science	Masters, G.M., Ela, W.P.	Prentice Hall / Pearson
	4	Manual on Sewerage and Sewage Treatment	CPHEEO	Govt. of India
	5	Manual on Municipal Solid Waste Management.	CPHEEO	Govt. of India
	6	Hazardous and other waste (Management and Transboundary Movement) Rules, 2016	MoEF	Govt. of India

<b>CE(PC)506</b>	<b>Transportation Engineering</b>	2L + 1T	3 Credits
<b>Course Outcome</b>	After going through this course, the students will be able to: <ol style="list-style-type: none"> <li>Understand the knowledge of planning, design and the fundamental properties of highway materials in highway engineering.</li> <li>Apply the knowledge of geometric design and draw appropriate conclusion.</li> <li>Interpret the concept of different methods in design, construction of the pavement.</li> <li>Interpret traffic parameters by applying the knowledge in traffic planning and intersection design.</li> </ol>		
<b>Prerequisite</b>	Class-XII level knowledge of Physics, Mathematics; Undergraduate level knowledge of Engineering Mechanics, Strength of Materials, Soil Mechanics		
<b>Module 1</b>	<b>Introduction to Highway Engineering</b> Scope of Highway Engineering; Jayakar Committee Report: Recommendations – CRF, IRC, CRRI; Scope of Motor Vehicle Act; Recommendations of Nagpur Road conference; Road Classification as per third 20 years road development plan (1981-2001); Basic types of Road Patterns and its scope of application	2L+1T	
<b>Module 2</b>	<b>Highway alignment</b> Factors controlling Highway Alignment; Engineering Surveys for Highway Alignment.	1L+1T	
<b>Module 3</b>	<b>Geometric Design</b> Cross-sectional elements of highway; Design Parameters (as per IRC) – Vehicle dimensions, Carriageway width, Design speed, Frictional coefficients (Lateral and Longitudinal) etc; Design Principles of Horizontal Alignment: Camber, Sight Distance (PIEV theory, SSD, OSD, ISD); Horizontal Curves – [Radius, Super elevation, Extra widening, Set back distance, Transition curve]; Design Principles of Vertical Alignment: Gradients; Grade Compensation; Vertical Curves – Summit Curve, Valley curve.	8L+4T	
<b>Module 4</b>	<b>Traffic Engineering</b> Traffic studies: Fundamental parameters of Traffic Flow (speed, flow, density, capacity) and their basic relations; Basics of Spot Speed Studies- Speed and Delay study- O & D study; Intersections and Channelization: At Grade and Grade Separated intersections; Conflict points; Salient features of Rotary; Traffic Signs; Signal Design – Basic concepts of IRC design method, 2 phase signal design by Webster method.	7L+3T	

**Maulana Abul Kalam Azad University of Technology, West Bengal**  
*(Formerly West Bengal University of Technology)*  
**Syllabus for B. Tech in Civil Engineering**  
 (Applicable from the academic session 2018-2019)

<b>Module 5</b>	<b>Pavement Design</b> Pavement materials: Bitumen, Aggregate, Subgrade soil; Types of Pavement: Flexible and Rigid pavements and their typical cross-sections; Design parameters: Wheel Load, ESWL, Tyre Pressure, CBR, Resilient Modulus & Poisson's Ratio of various layers, Subgrade Modulus etc. Design of Flexible Pavement using IRC 37:2018 Design of Rigid Pavement: Wheel Stresses, Frictional Stresses and Warping Stresses; Expansion, Contraction and Construction Joints; Design of Rigid Pavement thickness, Dowel Bar and Tie Bar. Distresses in Pavements			8L+5T
<b>Module 6</b>	<b>Sustainability</b> Scope of adoption of sustainable construction techniques by using recyclable hazardous materials- fly ash, plastics, recyclable construction materials.			1L+1T
<b>Reference</b>	<b>Sl.</b>	<b>Book Name</b>	<b>Author</b>	<b>Publishing House</b>
	1	Traffic Engineering and Transport Planning	Kadiyali L.R	Khanna Publishers
	2	Highway Engineering	Khanna, S.K. and C.E.G. Justo	Nem Chand and Bros
	3	Transportation Engineering – An Introduction	Jotin Khisty C. and B. Kent Lall	Prentice Hall of India Pvt. Ltd
	4	Principles of Transportation and Highway Engineering	Rao G.V.	Tata McGraw-Hill Publishing Company Ltd
	5	Specifications for Road and Bridge Works, Fourth Edition	Indian Roads Congress	Ministry of Road Transport and Highways

<b>CE(PC)591</b>	<b>RC Design Sessional</b>	2P	1 Credits
<b>Course Outcome</b>	After going through this course, the students will be able to: <ol style="list-style-type: none"> <li>1. Understand material properties and design methodologies for reinforced concrete structures.</li> <li>2. Assess different type of loads and prepare layout for reinforced concrete structures.</li> <li>3. Identify and apply the applicable industrial design codes relevant to the design of reinforced concrete members.</li> <li>4. Analyse and design various structural elements of reinforced concrete building like beam, slab, column, footing, and staircase.</li> <li>5. Assessment of serviceability criteria for reinforced concrete beam and slab.</li> <li>6. Prepare structural drawings and detailing and produce design calculations and drawing in appropriate professional format.</li> </ol>		
<b>Prerequisite</b>	Design of RC Structures (CE(PC)501)		
	Design of a small RCC framed building using Limit State method of design including preparation of necessary working drawing and report in accordance with CE(PC)501		

<b>CE(PC)594</b>	<b>Soil Mechanics Laboratory</b>	2P	1 Credits
<b>Course Outcome</b>	After going through this course, the students will be able to: <ol style="list-style-type: none"> <li>1. Identify different types of soil by visual inspection.</li> <li>2. Determine natural moisture content and specific gravity of various types of soil.</li> <li>3. Estimate in-situ density by core cutter method and sand replacement method.</li> <li>4. Analyze grain size distribution and Atterberg limits for soil.</li> <li>5. Perform laboratory tests to determine permeability and compaction characteristics of soil.</li> <li>6. Determine shear strength parameters of soil by unconfined compression test and vane shear test.</li> <li>7. Determine shear strength parameters of soil by direct shear test.</li> <li>8. Perform triaxial test to determine shear strength parameters of soil.</li> <li>9. Determine California Bearing Ratio (CBR) of soil.</li> <li>10. Prepare technical laboratory report</li> </ol>		
<b>Prerequisite</b>	Soil Mechanics – I (CE(PC)401) and Soil Mechanics – II (CE(PC)504)		
<b>Experiment 1</b>	Field identification of different types of soil as per Indian Standards [collection of field samples and identifications without laboratory testing].		
<b>Experiment 2</b>	Determination of natural moisture content.		
<b>Experiment 3</b>	Determination of specific gravity of cohesionless and cohesive soils.		
<b>Experiment 4</b>	Determination of in-situ density by core cutter method and sand replacement method.		
<b>Experiment 5</b>	Determination of grain size distribution by sieve and hydrometer analysis.		
<b>Experiment 6</b>	Determination of Atterberg limits (liquid limit, plastic limit and shrinkage limit).		
<b>Experiment 7</b>	Determination of co-efficient of permeability by constant and variable head permeability tests.		
<b>Experiment 8</b>	Determination of compaction characteristics of soil by standard proctor compaction test.		

**Maulana Abul Kalam Azad University of Technology, West Bengal**  
(Formerly West Bengal University of Technology)

**Syllabus for B. Tech in Civil Engineering**  
(Applicable from the academic session 2018-2019)

<b>Experiment 9</b>	Determination of unconfined compressive strength of soil by unconfined compression test.
<b>Experiment 10</b>	Determination of shear strength parameters of soil by direct shear test.
<b>Experiment 11</b>	Determination of undrained shear strength of soil by vane shear test.
<b>Experiment 12</b>	Determination of shear strength parameters of soil by unconsolidated undrained triaxial test.
<b>Experiment 13</b>	Determination of California Bearing Ratio (CBR) of soil.
<b>Experiment 14</b>	Determination of relative density of soil.
<b>Experiment 15</b>	Standard Penetration Test.
<b>Reference</b>	<ol style="list-style-type: none"> <li>1. Soil Mechanics Laboratory Manual by Braja Mohan Das (Oxford university press).</li> <li>2. SP: 36 (Part - I and Part - II)</li> </ol>

<b>CE(PC)595</b>	<b>Environmental Engineering Laboratory</b>	2P	1 Credits
<b>Course Outcome</b>	<p>On completion of the course the students will be able to:</p> <ol style="list-style-type: none"> <li>1. Experiment various physical characteristics for a given sample of water and wastewater</li> <li>2. Determine various chemical characteristics for a given sample of water and wastewater</li> <li>3. Examine the bacteriological characteristics for a given sample of water and wastewater</li> <li>4. Examine the suitability of a few treatment options for a given sample of water and wastewater</li> <li>5. Compare the determined quality parameters with standards to decide on the suitability of use for the tested water and disposal of tested wastewater</li> </ol>		
<b>Prerequisite</b>	Class-XII level knowledge of Physics, Chemistry, Mathematics, Biology and Environmental Science; Undergraduate level knowledge of Environmental Engineering, Biology for Engineers, Chemistry Laboratory, Physics Laboratory		
<b>Experiment 1</b>	Determination of turbidity for a given sample of water		
<b>Experiment 2</b>	Determination of electrical conductivity for a given sample of water		
<b>Experiment 3</b>	Determination of Total Solids, Suspended Solids, Dissolved Solids and Volatile Solids in a given sample of water		
<b>Experiment 4</b>	Determination of pH for a given sample of water		
<b>Experiment 5</b>	Determination of carbonate, bi-carbonate and hydroxide alkalinity for a given sample of water		
<b>Experiment 6</b>	Determination of acidity for a given sample of water		
<b>Experiment 7</b>	Determination of hardness for a given sample of water		
<b>Experiment 8</b>	Determination of concentration of Iron in a given sample of water		
<b>Experiment 9</b>	Determination of concentration of Chlorides in a given sample of water		
<b>Experiment 10</b>	Determination of the Optimum Alum Dose for a given sample of water through Jar Test		
<b>Experiment 11</b>	Determination of the Chlorine Demand and Break-Point Chlorination for a given sample of water		
<b>Experiment 12</b>	Determination of amount of Dissolved Oxygen (DO) in a given sample of water		
<b>Experiment 13</b>	Determination of the Biochemical Oxygen Demand (BOD) for a given sample of wastewater		
<b>Experiment 14</b>	Determination of the Chemical Oxygen Demand (COD) for a given sample of wastewater		
<b>Experiment 15</b>	Determination of Colliform Bacteria: presumptive test, Confirmative test and Determination of MPN

<b>CE(PC)596</b>	<b>Transportation Engineering Laboratory</b>	2P	1 Credits
<b>Prerequisite</b>	Transportation Engineering (CE(PC)506)		
<b>Introduction</b>	Introduction on pavement construction materials		
<b>Experiment 1</b>	Shape test of aggregate		
<b>Experiment 2</b>	Crushing Strength Test of aggregate		
<b>Experiment 3</b>	Impact test of aggregate		
<b>Experiment 4</b>	Los Angeles Abrasion test of aggregate		
<b>Experiment 5</b>	Specific Gravity and Water Absorption test of aggregate		
<b>Experiment 6</b>	Specific Gravity test		
<b>Experiment 7</b>	Penetration test		
<b>Experiment 8</b>	Static or Kinematic viscosity		

**Maulana Abul Kalam Azad University of Technology, West Bengal**  
*(Formerly West Bengal University of Technology)*  
**Syllabus for B. Tech in Civil Engineering**  
 (Applicable from the academic session 2018-2019)

<b>Experiment 9</b>	Softening point test
<b>Experiment 10</b>	Flash and Fire Point test
<b>Experiment 11</b>	Ductility test
<b>Experiment 12</b>	CBR value of sub-grade (Soaked and unsoaked)
<b>Experiment 13</b>	Marshall Stability test
<b>Demonstration</b>	Demonstration on Stripping value and Loss on heating tests of bitumen, Benkelman Beam and Bump Integrator test.

<b>CE(PC)597</b>	<b>Computer Applications in Civil Engineering</b>	<b>2P</b>	<b>1 Credits</b>
<b>Course Outcome</b>	On successful completion of this course, student should be able to: <ol style="list-style-type: none"> <li>7. Use the computer as a problem-solving tool.</li> <li>8. Identify and formulate Civil Engineering problems solvable by computers.</li> <li>9. Perform linear algebra and matrix operations and their application to solve Civil Engineering problems</li> <li>10. Solve sets of linear equations and determine roots and nonlinear equations</li> <li>11. Construct, interpret and solve simple optimization problems</li> <li>12. Develop programs for Civil Engineering analysis and design problems.</li> <li>13. Use various software used in industries for analysis and design.</li> </ol>		
<b>Prerequisite</b>	ES-CS291 Programming for Problem Solving, CE(ES)392 Computer-aided Civil Engineering Drawing.		
<b>Module 1</b>	<b>Introduction:</b> Concept of problem-solving using computer, use of programming language and software for problem solving; Identification of various design and analysis problems in different fields of Civil Engineering to be solved using computers; Procedure, formulae and data related to the analysis and design of such problems.		
<b>Module 2</b>	<b>Use of spreadsheets:</b> Learning spreadsheets like MS Excel, matrix analysis, use of Goal Seek and Solver, Optimization Tools; Plotting. Applications to problems involving tabular data, CE estimation, surveying, and design problems.		
<b>Module 3</b>	<b>Programming Languages:</b> Learning at least one language: Fortran 2003/2008/2018, C++11/C++14, Python 3, VBA 7.0; Computing platforms like Matlab/Scilab/MathCAD; Solving analysis and design problems in areas like surveying, hydraulics, structural analysis, RCC design, soil mechanics and foundation, transportation, water resources, etc.		
<b>Module 4</b>	<b>Use of Software:</b> Familiarity with widely used Civil Engineering software like STAAD Pro, HEC-RAS, HEC-HMS, SWMM, Mx Roads, etc.; Solving at least two such analysis/design problems.		

**Semester VI [Third year]**

<b>CE(PC)601</b>	<b>Construction engineering &amp; Management</b>	<b>2L + 0T</b>	<b>2 Credits</b>
<b>Course Outcome</b>	<b>On completion of the course, the students will have:</b> <ol style="list-style-type: none"> <li>1. An idea of how structures are built and projects are developed on the field</li> <li>2. An understanding of modern construction practices</li> <li>3. A good idea of basic construction dynamics- various stakeholders, project objectives, processes, resources required and project economics</li> <li>4. A basic ability to plan, control and monitor construction projects with respect to time and cost</li> <li>5. An idea of how to optimise construction projects based on costs</li> <li>6. An idea how construction projects are administered with respect to contract structures and issues.</li> <li>7. An ability to put forward ideas and understandings to others with effective communication processes</li> </ol>		
<b>Module 1</b>	<b>Planning:</b> General consideration, Definition of aspect, prospect, roominess, grouping, circulation, Privacy.		2L
<b>Module 2</b>	<b>Regulation and Bye laws</b> Bye Laws in respect of side space, Back and front space, Covered areas, height of building etc., Lavatory blocks , ventilation, Requirements for stairs, lifts in public assembly building, offices		4L
<b>Module 3:</b>	<b>Fire Protection</b> Fire fighting arrangements in public assembly buildings, planning , offices,		2L

**Maulana Abul Kalam Azad University of Technology, West Bengal**  
**(Formerly West Bengal University of Technology)**  
**Syllabus for B. Tech in Civil Engineering**  
**(Applicable from the academic session 2018-2019)**

	auditorium		
<b>Module 4:</b>	<b>Planning &amp; Scheduling of constructions Projects</b> <b>Planning by CPM</b> Preparation of network, Determination of slacks or floats. Critical activities. Critical path. Project duration. <b>Planning by PERT</b> Expected mean time, probability of completion of project, Estimation of critical path, problems		
<b>Module 5:</b>	<b>Construction Methods basics</b> Types of foundations and construction methods; Basics of Formwork and Staging; Common building construction methods (conventional walls and slabs); conventional framed structure with blockwork walls; Modular construction methods for repetitive works; Precast concrete construction methods; Basics of Slip forming for tall structures; Basic construction methods for steel structures; Basics of construction methods for Bridges.		
<b>Module 6</b>	<b>Construction plants &amp; Equipment</b> Plants & equipment for earth moving, road constructions, excavators, dozers, scrapers, spreaders, rollers, their uses. <b>Plants &amp; Equipment for concrete construction</b> Batching plants, Ready Mix Concrete, concrete mixers, Vibrators etc., quality control.		
<b>Module 7</b>	Contracts Management basics Importance of contracts; Types of Contracts, parties to a contract; Common contract clauses (Notice to proceed, rights and duties of various parties, notices to be given, Contract Duration and Price. Performance parameters; Delays, penalties and liquidated damages; Force Majeure, Suspension and Termination. Changes & variations, Dispute Resolution methods.		
<b>Module 8</b>	<b>Management</b> Professional practice, Definition, Rights and responsibilities of owner, engineer, Contractors, types of contract		
<b>Module 9</b>	<b>Departmental Procedures</b> Administration, Technical and financial sanction, operation of PWD, Tenders and its notification, EMD and SD, Acceptance of tenders, Arbitration		
<b>Reference</b>	<b>Sl.</b>	<b>Book Name</b>	<b>Author</b>

	3	<i>Construction Technology</i>	Chudley, R.
	4	Construction Planning, Methods and Equipment	Peurifoy, R.L.
	5	Construction Methods and Management,	Nunnally, S.W.
6	Project Planning with PERT and CPM	Punmia, B.C., Khandelwal, K.K.	Prentice Hall India, ELBS Publishers McGraw Hill Prentice Hall Laxmi Publications

<b>CE(PC)602</b>	<b>Engineering Economics, Estimation &amp; Costing</b>	<b>2L + 0T</b>	<b>2 Credits</b>
<b>Course Outcome</b>	<b>On completion of the course, the students will:</b> <ol style="list-style-type: none"> <li>1. Have an idea of Economics in general, Economics of India particularly for public sector agencies and private sector businesses</li> <li>2. Be able to perform and evaluate present worth, future worth and annual worth analyses on one of more economic alternatives.</li> <li>3. Be able to carry out and evaluate benefit/cost, life cycle and breakeven analyses on one or more economic alternatives.</li> <li>4. Be able to understand the technical specifications for various works to be performed for a project and how they impact the cost of a structure.</li> <li>5. Be able to quantify the worth of a structure by evaluating quantities of constituents, derive their cost rates and build up the overall cost of the structure.</li> <li>6. Be able to understand how competitive bidding works and how to submit a competitive bid proposal.</li> </ol>		
<b>Module 1</b>	<b>Basic Principles and Methodology of Economics.</b> Demand/Supply – elasticity – Government Policies and Application. Theory of the Firm and Market Structure. Basic Macroeconomic Concepts (including GDP/GNP/NI/Disposable Income) and Identities for both closed and open economies.		<b>3L</b>

**Maulana Abul Kalam Azad University of Technology, West Bengal**  
(Formerly West Bengal University of Technology)

**Syllabus for B. Tech in Civil Engineering**  
(Applicable from the academic session 2018-2019)

	Aggregate demand and Supply (IS/LM). Price Indices (WPI/CPI), Interest rates, Direct and Indirect Taxes																					
<b>Module 2</b>	<b>Elements of Business/Managerial Economics and forms of organizations.</b> Cost & Cost Control –Techniques, Types of Costs, Lifecycle costs, Budgets, Break even Analysis, Capital Budgeting, Application of Linear Programming. Investment Analysis – NPV, ROI, IRR, Payback Period, Depreciation, Time value of money (present and future worth of cash flows). Business Forecasting – Elementary techniques. Statements – Cash flow, Financial. Case Study Method.	3L																				
<b>Module 3:</b>	<b>Estimation / Measurements for various items</b> Introduction to the process of Estimation; Use of relevant Indian Standard Specifications for the same, taking out quantities from the given requirements of the work, comparison of different alternatives, Bar bending schedules, Mass haul Diagrams, Estimating Earthwork and Foundations, Estimating Concrete and Masonry, Finishes, Interiors, MEP works; BIM and quantity take-offs; adding equipment costs; labour costs; rate analysis; Material survey-Thumb rules for computation of materials requirement for different materials for buildings, percentage breakup of the cost, cost sensitive index, market survey of basic materials. Use of Computers in quantity surveying	9L																				
<b>Module 4:</b>	<b>Specifications</b> Types, requirements and importance, detailed specifications for buildings, roads, minor bridges and industrial structures.	3L																				
<b>Module 5:</b>	<b>Rate analysis</b> Purpose, importance and necessity of the same, factors affecting, task work, daily output from different equipment/ productivity.	3L																				
<b>Module 6</b>	<b>Tender-</b> Preparation of tender documents, importance of inviting tenders, contract types, relative merits, prequalification. general and special conditions, termination of contracts, extra work and Changes, penalty and liquidated charges, Settlement of disputes, R.A. Bill & Final Bill, Payment of advance, insurance, claims, price variation, etc. Preparing Bids- Bid Price buildup: Material, Labour, Equipment costs, Risks, Direct & Indirect Overheads, Profits; Bid conditions, alternative specifications; Alternative Bids. Bid process management	3L																				
<b>Module 7</b>	<b>Valuation</b> Values and cost, gross income, outgoing, net income, scrap value, salvage value, market value, Book Value, sinking fund, capitalised value, Y. P., depreciation, obsolescence, deferred income, freehold and leasehold property, mortgage, rent fixation, valuation table	3L																				
<b>Module 8</b>	Introduction to Acts pertaining to-Minimum wages, Workman's compensation, Contracts, Arbitration, Easement rights.	2L

<b>CE(PC)603</b>	<b>Water Resources Engineering</b>	<b>2L + 0T</b>	<b>2 Credits</b>
<b>Course Outcome</b>	<p>On successful completion of this course, student should be able to:</p> <ol style="list-style-type: none"> <li>Understand the fundamentals of flow in open channels.</li> <li>Understand the concepts of irrigation.</li> <li>Estimate the quantity of water required by different crops in different seasons, and accordingly the irrigation water requirement.</li> <li>Design channels and other irrigation structures required for irrigation, drainage, soil conservation, flood control and other water-management projects.</li> <li>Learn about groundwater resources, aquifers and wells.</li> </ol>		
<b>Prerequisite</b>	Introduction to Civil Engineering, Introduction to Fluid Mechanics CE(ES)401		

**Maulana Abul Kalam Azad University of Technology, West Bengal**  
(Formerly West Bengal University of Technology)

**Syllabus for B. Tech in Civil Engineering**  
(Applicable from the academic session 2018-2019)

<b>Module 1</b>	<b>Open Channel Flow:</b> Channel Characteristics and parameters, Energy-depth relationships, Specific Energy concept, Critical Flow, Hydraulic Jump, Uniform flow, Efficient sections, Slope profiles, Gradually Varied Flow, Water surface profiles.	8L		
<b>Module 2</b>	<b>Irrigation:</b> Definition, Necessity, Scope, Benefits of Irrigation; Types, techniques and sources of irrigation; Development of irrigation in India.	3L		
<b>Module 3:</b>	<b>Soil-water-plant Relationship:</b> Types of crops, cropping seasons, water requirement of crops, base period, kor period, Duty, Delta, Commanded area, Net Irrigation Requirement, Field Irrigation Requirement, Gross Irrigation Requirement, Intensity of irrigation, Consumptive use of water, estimation of evapotranspiration, Blaney-Criddle method, Modified Penman's method, Irrigation efficiencies, Frequency of irrigation.	6L		
<b>Module 4:</b>	<b>Canal irrigation:</b> Classification of irrigation canals, canals in alluvium; Design of unlined canals: Kennedy's method, Lacey's method; Lined canals: advantages, materials used, typical sections, design of lined canals, economics of canal lining; Canal sections – filling, cutting, partial cutting and partial filling.	6L		
<b>Module 5:</b>	<b>Land drainage:</b> Water logging issues in irrigation, provision of drains, design and maintenance of open drains, closed drains, discharge and spacing of closed drains.	4L		
<b>Module 6</b>	<b>Groundwater:</b> Occurrence of groundwater– Aquifers, Various Types of Aquifers, Aquifer Parameters: Specific Yield, Specific Retention, Storage Coefficient, Transmissivity.	4L

<b>CE(PC)604</b>	<b>Design of Steel Structures</b>	<b>2L + 0T</b>	<b>2 Credits</b>
<b>Course Outcome</b>	After going through this course, the students will be able to: <ol style="list-style-type: none"> <li>1. Identify the material properties of structural steel. Moreover, the students will identify different bolted and welded connections, analyse and design them for axial and eccentric loads.</li> <li>2. Design different steel sections subjected to axial compression and tension following Indian codes of practices.</li> <li>3. Comprehend the differences between laterally supported and unsupported flexure members. Designing of the flexure members using Indian codes of practice.</li> <li>4. Analyse and design rolled and built up compression members along with base connection subjected to axial compression, bending and tension.</li> <li>5. Calculate shear force and bending moment on rolled and built up girders, dimension the section and finally design it following Indian standard design guidelines.</li> <li>6. Identify different components of gantry system, calculate lateral and vertical loads acting on the system, dimension the components and design them.</li> <li>7. Design different components of an industrial building.</li> </ol>		
<b>Prerequisite</b>	Introduction to Solid Mechanics (CE(ES)402)		
<b>Module 1</b>	<b>Materials and Specification:</b> Rolled steel sections, mechanical properties of steel and their specifications for structural use. Codes of practices. Design of Steel structures using <b>tubular</b> , rectangular and square section	1L	
<b>Module 2</b>	<b>Structural connections:</b> Riveted, welded and bolted including High strength friction grip bolted joints. – types of riveted & bolted joints, assumptions, failure of joints ,efficiency of joints, design of bolted ,riveted & welded joints for axial load. Eccentric connection:- Riveted & bolted joints subjected to torsion & shear, tension & shear, design of riveted, bolted & welded connection.	6L	
<b>Module 3</b>	<b>Design of Tension members:</b> Design of tension members, I.S code provisions. Permissible stresses, Design rules, Examples.	3L	
<b>Module 4</b>	<b>Design of Compression members:</b> Effective lengths about major & minor principal axes, I.S code provisions. Permissible stresses, Design rules, Design of	6L

<b>CE(PE)601A</b>	<b>Stability of Slopes</b>	<b>2L + 0T</b>	<b>2 Credits</b>
<b>Course Outcome</b>	On successful completion of this course, student should be able to: <ol style="list-style-type: none"> <li>1. Understand the fundamental theories and knowledge in the stability analysis of soil slopes.</li> <li>2. Measure the finite and infinite slope stability.</li> <li>3. Develop the analytical and numerical skills in treating a complicated practical slope problem.</li> <li>4. Evaluate the safety and design proper slope protection measures.</li> <li>5. Analyse the strength parameters in slope stability.</li> </ol>		
<b>Prerequisite</b>	Introduction to Civil Engineering (CE(HS)302), Soil Mechanics – I (CE(PC)401), Soil Mechanics – II (CE(PC)504).		
<b>Module 1</b>	<b>Introduction:</b> slope failure- causes, short- and long-term failure.		2L
<b>Module 2</b>	<b>Landslides:</b> types, multiple and complex slides, rate of land movement, factor of safety, examples.		4L
<b>Module 3:</b>	<b>Slope stability analysis:</b> basic concepts, finite and infinite slopes, analysis of infinite slopes-dry or moist cohesive slope, non-cohesive slope, cohesive slope with seepage;		8L
<b>Module 4:</b>	<b>Analysis of finite slopes:</b> planar failure surface, circular failure surface, friction circle method, Taylors stability chart, locaton of critical circle, total stress analysis,		8L
<b>Module 5:</b>	<b>Method of Slices:</b> Fellenius method, Bishop’s simplified method, effective stress stability chart.		4L
<b>Module 6</b>	Non-circular failure surfaces, selection of strength parameter in slope stability, various slope protection measures.		2L

**Syllabus for B. Tech in Civil Engineering**  
(Applicable from the academic session 2018-2019)

	(Anumāna), Comparison (Upamāna), Testimony (Sabda); Theory of Causation (Asatkāryavāda); Self and Liberation; The Concept of God	
<b>Module 6</b>	Mimamsa Philosophy: Epistemology -- Validity of Knowledge; Sources of Valid Knowledge (Pramāna) – Perception, Inference, Comparison, Verbal Testimony, Postulation (Arthapati), Non Apprehension (Anupalabdhi); Theories of Error (Khyativāda) – Akhyativāda, AnirvacaniyaKhyativāda, Viparitakhyativāda; Metaphysics -- Theory of Causation; Nature of Self; God and Liberation	4L
<b>Module 7</b>	Vaisesika Philosophy: Metaphysics and the Categories -- Substance (Dravya), Quality (Guṇa), Action (Karma), Generality (Sāmānya), Particularity (Vaiśeṣa), Inherence (Samavāya), Nonexistence (Abhāva); Epistemology; The Concept of God; Bondage and Liberation	3L
<b>Module 8</b>	Buddhist Philosophy: Epistemology -- Dependent Origination; Four Noble Truths; Eight Fold Paths; Ethics; Karma and Rebirth; Liberation	4L
<b>Module 9</b>	Jaina Philosophy: Syādvāda; Anekāntavāda; Ethics; Karma and Liberation	3L

<b>CE(PC)693</b>	<b>Water Resource Engineering Laboratory</b>	<b>2P</b>	<b>1 Credits</b>
<b>Course Outcome</b>	On completion of the course, the students will be able to: <b>14.</b> Delineate the watershed of any reservoir using DEM. <b>15.</b> Determine the average rainfall over a catchment. <b>16.</b> Use the raingauge properly for a specified purpose. <b>17.</b> Measure the rate of infiltration of water through the soil. <b>18.</b> Measure the sunshine hours in a particular day.		
<b>Prerequisite</b>	Engineering Hydrology CE(PC)502 & Water Resources Engineering CE(PC)603		
<b>Experiment 1</b>	Catchment area delineation (Manually and using DEM)		
<b>Experiment 2</b>	Calculation of average rainfall over a catchment area with arithmetic mean method, Thiessen polygon method and Isohyetal Method.		
<b>Experiment 3</b>	Use of different type of Rain gauges.		
<b>Experiment 4</b>	Measurement of infiltration rate using double ring infiltrometer.		
<b>Experiment 5</b>	Measurement of evaporation using evaporimeter.		
<b>Experiment 6</b>	Measurement of bright sunshine hours using sunshine recorder.		

<b>CE(PC)694</b>	<b>Steel Structure Design Sessional</b>	<b>2P</b>	<b>1 Credits</b>
<b>Course Outcome</b>	After going through this course, the students will be able to: <b>1.</b> Identify the material properties of structural steel. Moreover, the students will identify different bolted and welded connections, analyse and design them for axial and eccentric loads. <b>2.</b> Design different steel sections subjected to axial compression and tension following Indian codes of practices. <b>3.</b> Comprehend the differences between laterally supported and unsupported flexure members. Designing of the flexure members using Indian codes of practice. <b>4.</b> Analyse and design rolled and built up compression members along with base connection subjected to axial compression, bending and tension. <b>5.</b> Calculate shear force and bending moment on rolled and built up girders, dimension the section and finally design it following Indian standard design guidelines. <b>6.</b> Identify different components of gantry system, calculate lateral and vertical loads acting on the system, dimension the components and design them. <b>7.</b> Design different components of an industrial building.		
<b>Prerequisite</b>	Design of Steel Structures (CE(PC)604)		
	Design of a factory shed including preparation of necessary working drawings and report in accordance with CE(PC)604		

<b>CE(PC)695</b>	<b>Quantity Survey Estimation and Valuation Sessional</b>	<b>1T+2P</b>	<b>2 Credits</b>
<b>Course Outcome</b>	The subject aims to provide the student with: <b>1.</b> An introduction to quantity surveying <b>2.</b> The capability to know analysis and schedule of rates		

**Maulana Abul Kalam Azad University of Technology, West Bengal**  
(Formerly West Bengal University of Technology)

**Syllabus for B. Tech in Civil Engineering**  
(Applicable from the academic session 2018-2019)

	<ol style="list-style-type: none"> <li>3. The ability to know specification of materials</li> <li>4. An understanding about specification of works</li> <li>5. The introduction to valuation</li> </ol>
<b>Prerequisite</b>	Introduction to Civil Engineering [CE(HS)302], Construction Engineering & Management [CE(PC)601], Engineering Economics, Estimation & Costing [CE(PC)602]
	<ol style="list-style-type: none"> <li>1. Quantity Surveying: Types of estimates, approximate estimates, items of work, unit of measurement, unit rate of payment.</li> <li>2. Quantity estimate of a single storied building</li> <li>3. Bar bending schedule.</li> <li>4. Details of measurement and calculation of quantities with cost, bill of quantities, abstract of quantities.</li> <li>5. Estimate of quantities of road, Underground reservoir, Surface drain, Septic tank.</li> <li>6. Analysis and schedule of rates: Earthwork, brick flat soling, DPC, PCC and RCC, brick work, plastering, flooring and finishing,</li> <li>7. Specification of materials: Brick, cement, fine and coarse aggregates</li> <li>8. Specification of works: Plain cement concrete, reinforced cement concrete, first class brickwork, cement plastering, pointing, white washing, colour washing, distempering, lime punning, painting and varnishing</li> <li>9. Valuation: Values and cost, gross income, outgoing, net income, scrap value, salvage value, market value, Book Value, sinking fund, capitalised value, Y. P., depreciation, obsolescence, deferred income, freehold and leasehold property, mortgage, rent fixation, valuation table</li> </ol>

**Semester VII [Fourth year]**

<b>CE(OE)701A</b>	<b>Metro System and Engineering</b>	<b>2L + 0T</b>	<b>2 Credits</b>
<b>Module 1</b>	Overview of Metro Systems; Need for Metros; Routing studies; Basic Planning and Financial		4L
<b>Module 2</b>	<b>CIVIL ENGINEERING</b> Overview and construction methods for: Elevated and underground Stations; Viaduct spans and bridges; Underground tunnels; Depots; Commercial and Service buildings. Initial Surveys & Investigations; Basics of Construction Planning & Management, Construction Quality & Safety Systems. Traffic integration, multimodal transfers and pedestrian facilities; Environmental and social safeguards; Track systems-permanent way. Facilities Management		12L
<b>Module 3:</b>	<b>ELECTRONICS AND COMMUNICATION ENGINEERING</b> Signaling systems; Automatic fare collection; Operation Control Centre (OCC and BCC); SCADA and other control systems; Platform Screen Doors.		5L
<b>Module 4:</b>	<b>MECHANICAL &amp; TV + AC</b> Rolling stock, vehicle dynamics and structure; Tunnel Ventilation systems; Air conditioning for stations and buildings; Fire control systems; Lifts and Escalators		5L
<b>Module 5:</b>	<b>ELECTRICAL:</b> OHE, Traction Power; Substations- TSS and ASS; Power SCADA; Standby and Back-up systems; Green buildings, Carbon credits and clear air mechanics		5L

<b>CE(OE)701B</b>	<b>ICT for Development</b>	<b>2L + 0T</b>	<b>2 Credits</b>
<b>Module 1</b>	Introduction to ICT: New media and ICT, Different types of ICT. Use of ICT for development; e-learning; Web commerce; Mobile telephony and Development: telecom industry in India. ICT Projects implemented in India and Northeast – Problems and Prospects		7L
<b>Module 2</b>	Digital Revolution and Digital Communication: Basics of New media theories – Information Society; Surveillance society; Digital Divide, Knowledge society; Network society. Works of Machlup, Bell, Negroponte and Castells		6L
<b>Module 3:</b>	Technology and Development: ICT for Development its societal implications; Evolution of ICT in Development Endeavour; ICT and Millennium Development Goals. Democratic and decentralized processes in development. Technology and culture: community and identity; participatory culture and ICT, community informatics		8L
<b>Module 4:</b>	Computer Mediated Communication and development: Different types of CMC; Important theoretical framework of CMC, cyber platform and communities, Social Networking Site; Convergent media, Multimedia platforms, Scope of convergent journalism for Development; Characteristics of convergent journalism; Different types of convergent journalism: precision journalism; annotative and open-source		10L

**Maulana Abul Kalam Azad University of Technology, West Bengal**  
(Formerly West Bengal University of Technology)

**Syllabus for B. Tech in Civil Engineering**  
(Applicable from the academic session 2018-2019)

	journalism; wiki journalism; open source journalism; citizen journalism; back-pack journalism, Convergent technologies and applications; Multimedia convergence and Interactivity	
--	---	--

CE(OE)701C	Cyber Law & Ethics	2L + 0T	2 Credits	
<b>Module 1</b>	Introduction: Basics of Law, Understanding Cyber Space, Defining Cyber Laws, Scope and Jurisprudence, Concept of Jurisdiction, Cyber Jurisdiction, Overview of Indian Legal System, Introduction to IT Act 2000, Amendments in IT Act, Cyber Laws of EU – USA – Australia - Britain, other specific Cyber laws		6L	
<b>Module 2</b>	Computer Ethics, Privacy and Legislation: Computer ethics, moral and legal issues, descriptive and normative claims, Professional Ethics, code of ethics and professional conduct. Privacy, Computers and privacy issue, Digital Evidence Controls, Evidence Handling Procedures, Basics of Indian Evidence ACT, Legal Policies, legislative background		7L	
<b>Module 3:</b>	Intellectual Property Rights Issues: Copyrights, Jurisdiction Issues and Copyright Infringement, Multimedia and Copyright issues, WIPO, Intellectual Property Rights, Understanding Patents, Understanding Trademarks, Trademarks in Internet, Domain name registration, Software Piracy, Legal Issues in Cyber Contracts, Authorship, Document Forgery		7L	
<b>Module 4:</b>	Indian IT Act and Standards: Indian IT ACT, Adjudication under Indian IT ACT, IT Service Management Concept, IT Audit standards, ISO/IEC 27000 Series, COBIT, HIPPA, SOX, System audit, Information security audit, ISMS, SoA (Statement of Applicability), BCP (Business Continuity Plan), DR (Disaster Recovery), RA (Risk Analysis/Assessment)		6L	
<b>Module 5:</b>	International Laws governing Cyber Space: Introduction to International Cyber Law, UNCITRAL, Cyber Laws: Legal Issues and Challenges in India, Net neutrality, Role of INTERPOL.		4L	
<b>Reference</b>	<b>Sl.</b>	<b>Book Name</b>	<b>Author</b>	<b>Publishing House</b>
	1	Computer Ethics	Deborah G. Johnson	Pearsons Education
	2	Cyber Law Simplified	Vivek Sood	McGraw Hill Education
	3	Cyber frauds, cybercrimes & law in India	Pavan Duggal,	Saakshar Law Publications
	4	The Internet Law of India: Indian Law Series	Shubham Sinha	CreateSpace Independent Publishing Platform

CE(PE)701A	Computational Hydraulics	2L + 1T	3 Credits
<b>Course Outcome</b>	On successful completion of this course, student should be able to: 7. Identify the complexities involved in fluid flow problems. 8. Model the specific flow problem in terms of defining the governing equations, initial and boundary conditions and appropriate solution schemes to use. 9. Develop finite difference formulation of ordinary and partial differential equations of flow problems. 10. Develop finite volume formulation of ordinary and partial differential equations of flow problems.		
<b>Prerequisite</b>	Introduction to Civil Engineering CE(HS)302, Introduction to Fluid Mechanics CE(ES)401, Water Resources Engineering CE(PC)603,		
<b>Module 1</b>	<b>Introduction:</b> Modelling Theory - Physical modelling, analytical modelling, numerical modelling; classification of models based on i) Scale (space and time), ii) Solution (analytical and numerical); Concept of computational hydraulics; Processes involved in model development and application.		4L
<b>Module 2</b>	<b>Modelling Fluid Flow Problems:</b> Governing equations- Conservation of mass, conservation of momentum, conservation of energy; Mathematical classification of flow equations, solution of ordinary differential equations and partial differential equations, boundary conditions; Solution of Saint-Venant Equations - Kinematic wave solution, Diffusive wave solution and full dynamic solution; Characteristic form of Saint-Venant Equations.		8L
<b>Module 3:</b>	<b>Numerical Solution Schemes:</b> Discrete solution of governing equations, Space discretization - Structured grids and unstructured grids, grid generation, time discretization.		2L
	<b>Finite Difference Method:</b> General concept, approximation of derivatives; Finite difference formulation for ordinary differential equations - Explicit		8L

**Maulana Abul Kalam Azad University of Technology, West Bengal**  
(Formerly West Bengal University of Technology)

**Syllabus for B. Tech in Civil Engineering**  
(Applicable from the academic session 2018-2019)

	schemes, Implicit schemes, Mixed schemes and weighted average schemes; Finite difference formulation for partial differential equations - initial conditions, boundary conditions, explicit and implicit schemes; The Preissmann Scheme, The Abbott-Ionescu scheme.																					
	<b>Example Applications:</b> Ordinary differential equation - Solution of linear reservoir problem; Partial differential equation - Solution of simple wave propagation, Solution of diffusion equation.	6L																				
<b>Module 4:</b>	<b>Finite Volume Method:</b> General concept, Steps in application of Finite Volume Method- Surface and volume integrals, Discretization of convective fluxes, Discretization of diffusive fluxes, evaluation of time derivative, boundary conditions.	8L																				
	<b>Example Application:</b> Solution of Advection-Diffusion Equation in 1-D.	4L

<b>CE(PE)701B</b>	<b>Disaster Preparedness and Planning</b>	2L + 1T	3 Credits
<b>Course Outcome</b>	On completion of the course the students will be able to: <ol style="list-style-type: none"> <li>1. Define the basic concepts and terminologies disaster management</li> <li>2. Understand and describe the categories of disaster</li> <li>3. Realize the roles and responsibilities of a civil engineer towards society in time of a disaster</li> <li>4. Analyze relationship between development and disasters</li> <li>5. Apply different concepts of disaster management</li> </ol>		
<b>Prerequisite</b>	Class-X level knowledge of Indian Geography and Class-XII level knowledge of Physics, Chemistry, Mathematics, Biology and Environmental Science; Undergraduate level introductory knowledge of Civil and Environmental Engineering		
<b>Module 1</b>	<b>Introduction, Basic Concepts and Definitions</b> Disaster, Hazard, Vulnerability, Risks, Severity, Frequency and details, Capacity, Impact, Prevention, Mitigation	3L+1T	
<b>Module 2</b>	<b>Disasters and their Classification</b> Natural Disasters: Floods, Draught, Cyclones, Volcanoes, Earthquakes, Tsunami, Landslides, Coastal Erosion, Soil Erosion, Forest Fires Manmade Disasters: Industrial Pollution, Artificial Flooding in Urban Areas, Nuclear Radiation, Chemical Spills, Transportation Accidents, Terrorist Strikes Hazard and vulnerability profile of India, Mountain and coastal areas, Ecological fragility	5L+3T	
<b>Module 3:</b>	<b>Disaster Impacts</b> Disaster Impacts: Environmental, Physical, Social, Ecological, Economic, Political Health, Psycho-social issues; Demographic aspects (gender, age, special needs); Hazard locations; Global and national disaster trends; Climate change and urban disasters.	7L+3T	
<b>Module 4:</b>	<b>Disaster Risk Reduction (DRR)</b> Phases of disaster management cycle; Prevention, Mitigation, Preparedness, Relief and recovery; Structural and non-structural measures; Risk analysis, Vulnerability and capacity assessment; Early warning systems, Post-disaster environmental response (water, sanitation, food safety, waste management, disease control, security, communications); Roles and responsibilities of government, community, local institutions, NGOs and other stakeholders; Policies and legislation for disaster risk reduction, DRR	7L+3T

<b>CE(PE)701C</b>	<b>Hydraulic Structures</b>	<b>2L + 1T</b>	<b>3 Credits</b>	
<b>Course Outcome</b>	On successful completion of this course, student should be able to: <ol style="list-style-type: none"> <li>1. Identify the characteristics of various types of dams and their selection procedure.</li> <li>2. Perform the reconnaissance survey and, geophysical investigations necessary for selection of suitable dam site</li> <li>3. Estimate forces acting on a gravity dams and perform stability analysis.</li> <li>4. Estimate the seepage loss through embankment dams and suggest necessary remedial measures.</li> <li>5. Calculate the discharge through the overflow section and design the appropriate energy dissipation structures.</li> </ol>			
<b>Prerequisite</b>	Introduction to Civil Engineering CE(HS)302, Water Resources Engineering CE(PC)603,			
<b>Module 1</b>	<b>Storage Structures:</b> Dams, Types of Dams – Embankment dams, gravity dams, various components and their functions	1L + 1T		
<b>Module 2</b>	<b>Selection of Dam Site:</b> Site investigations, initial study, reconnaissance survey, geophysical investigations, preliminary selection, evaluation of selected site - various types of foundation testing, field testing and borrow pit investigations, detailed investigations; assessment of foundation characteristics and suitability; selection of type of dam.	4L + 2T		
<b>Module 3:</b>	<b>Gravity Dam:</b> Definition, Features of some important gravity dams, Forces acting on a gravity dam, estimation of forces due to: self-weight, water pressure on upstream and downstream face, Uplift pressure, wave pressure, silt pressure, wind pressure, earthquake forces, hydrodynamic forces; Stability analysis - load combinations, codal provisions, modes of failures - overturning, sliding, tension and compression failures, factors of safeties, principal stresses; Elementary profile of a gravity dam - forces acting, minimum base width - no tension, no sliding basis, principal stresses.	8L + 4T		
	<b>Embankment Dams:</b> Definitions, Features of some important embankment dams; Types of embankment dams and their sectional features; Design criteria; Freeboard - necessity, estimation procedure; Seepage analysis - Laplace's flow equations, drainage blanket and rock toe, phreatic line, graphical procedure of drawing phreatic line, estimation of seepage loss; Stability analysis of embankment dams – slip circle method; Seepage Control - cut-offs, slurry trench, sheet piling, grouting, slope protection.	6L + 2T		
	<b>Diversion headworks:</b> Necessity and uses, different types, layout and different components; weirs on permeable foundation, Creep theories, Khosla's method; Different types of modules, Canal escapes, Silt control devices.	5L + 3T		
<b>Module 4:</b>	<b>Spillways and Energy Dissipation Structures:</b> Necessity, types, selection, spillway gates; High overflow ogee spillway - profile, discharge computation, flow equations, factors affecting coefficient of discharge, codal provisions. stilling basins (USBR and BIS) types	4L + 2T

<b>CE(PE)702A</b>	<b>Prestressed Concrete</b>			2L + 1T	3 Credits
<b>Course Outcome</b>	After going through this course, the students will be able to: 1. Learn the introduction of prestressed concrete member and its deflection properties 2. Develop the design criteria of prestressed concrete section for flexure and shear properties 3. Analyze the anchorage zone stress for post-tensioned members 4. Impart knowledge regarding the methods of Analysis of Statically Indeterminate Structures. 5. Impart knowledge regarding the composite construction of Prestress and In-situ concrete. 6. Impart knowledge regarding Design of Prestressed concrete poles and sleepers and introduction of partial prestressing.				
<b>Prerequisite</b>	Introduction to Solid Mechanics (CE(ES)402), Structural Analysis – I (CE(PC)503), Design of RC Structures (CE(PC)501)				
<b>Module 1</b>	<b>Introduction of Prestressed concrete:</b> Materials, prestressing system, analysis of prestress and bending stress, losses Shear and torsional resistance: design of shear reinforcement, design of reinforcement for torsion shear and bending. <b>Deflections of prestressed concrete members:</b> Importance, factors, short term and long term deflection			8L+4T	
<b>Module 2</b>	<b>Shear and Torsional Resistance:</b> Design of Shear Reinforcement, Design of Reinforcement for Torsion, Shear and Bending. <b>Limit State Design Criteria:</b> Inadequacy of Elastic and Ultimate Load Method, Criteria for Limit States, Strength and Serviceability. <b>Design of Prestressed Concrete Section:</b> for Flexure & methods by Lin and Magnel			8L+4T	
<b>Module 3</b>	<b>Anchorage Zone stresses in post tensioned members:</b> Stress distribution in end block, anchorage zone reinforcement			3L+1T	
<b>Module 4</b>	<b>Statically Indeterminate Structures:</b> Advantages of Continuous Member, Effect of Prestressing, Methods of Achieving Continuity and Method of Analysis of Secondary Moments			4L+2T	
<b>Module 5</b>	<b>Composite Construction of Prestressed and In-situ Concrete:</b> Types, Analysis of Stresses			3L+1T	
<b>Module 6</b>	<b>Prestressed Concrete Poles and Sleepers:</b> Design of Sections for Compression and Bending. Introduction to Partial Prestressing.			2L+2T	
<b>IS Codes</b>	1	IS: 1343 : 2012

	4	Prestressed Concrete	Karuna Moy Ghosh	PHI	
	5	Design of Prestressed Structures	T.Y.Lin and N.H.Burns		

<b>CE(PE)702B</b>	<b>Repair &amp; Rehabilitation of Structures</b>			2L + 1T	3 Credits
<b>Course Outcome</b>	By the end of this course students will have the capability/knowledge of 1. Various distress and damages to concrete and masonry structures 2. The importance of maintenance of structures, types and properties of repair materials etc 3. Assessing damage to structures and various repair techniques				
<b>Prerequisite</b>	Introduction to Solid Mechanics (CE(ES)402), Structural Analysis – I (CE(PC)503), Design of RC Structures (CE(PC)501), Concrete Technology (CE(PC)405).				
<b>Module 1</b>	<b>Introduction:</b> Overview of distress, deterioration in concrete structures, Scenario of distressed structures world over, Need for repairs and upgrading of			3L+1T	

**Maulana Abul Kalam Azad University of Technology, West Bengal**  
(Formerly West Bengal University of Technology)

**Syllabus for B. Tech in Civil Engineering**  
(Applicable from the academic session 2018-2019)

	structures, General introduction to process (Road-map) to a durable concrete repair			
<b>Module 2</b>	<b>Deterioration of concrete structures:</b> Types of deterioration – Signs, causes & symptoms, Mechanism of deterioration, contributing factors like permeability, inadequate durability & micro-structure of concrete. Physical deterioration due to moisture, temperature, shrinkage, freeze-thaw, abrasion, erosion, cavitation, crystallization of salts, Efflorescence, exposure to severe environment like marine exposure. Chemical deterioration due to corrosion of reinforcement (chloride induced, carbonation induced), Alkali-silica reaction, sulphate attack, Acid attack. Deterioration due to water leakage, fire – detection & mitigation of the same. Deterioration due to ageing, inadequate maintenance, Design & construction deficiencies, overloading etc. Types of cracks, causes & characteristics of cracking in various structural components like beam, column, slab, masonry walls. Measurement of cracks, interpretation of the cause of particular type of crack.	6L+3T		
<b>Module 3</b>	<b>Conditional/damage assessment &amp; Evaluation of structures:</b> Structural assessment: Conditional evaluation / Structural Appraisal of the structure – Importance, objective & stages, Conditional/damage assessment procedure, Preliminary & Detailed investigation – Scope, Objectives, Methodology & Rapid visual inspection of structures <b>Damage Assessment allied Tests (Destructive, Semi-destructive, Nondestructive):</b> Field & laboratory testing procedures for evaluating the structure for strength, corrosion activity, performance & integrity, durability. Interpretation of the findings of the tests	6L+3T		
<b>Module 4</b>	<b>Repairs, rehabilitation &amp; Retrofitting of concrete structures:</b> Repair materials - Criteria for durable concrete repair, Methodology, performance requirements, repair options, selection of repair materials, Preparatory stage of repairs, Different types of repair materials & their application, types of repair techniques. <b>Retrofitting/Strengthening:</b> Need for retrofitting, Design philosophy of strengthening structures, Techniques available for strengthening including conventional and advanced techniques. <b>Seismic retrofit of concrete structures:</b> Deficiencies in structure requiring seismic retrofit, Design philosophy, Techniques to enhance the seismic resistance of structures, advanced techniques for making seismic resistant structures	9L+3T		
<b>Module 5</b>	<b>Protection &amp; maintenance of structures</b> - Importance of protection & maintenance, Categories of maintenance, Building maintenance. Corrosion mitigation techniques to protect the structure from corrosion. <b>Long term health monitoring / Structural health monitoring (SHM)</b> – Definition and motivation for SHM, Basic components of SHM and its working mechanism, SHM as a tool for proactive maintenance of structures.	4L+2T

<b>CE(PE)703A</b>	<b>Air and Noise Pollution and Control</b>	<b>2L + 1T</b>	<b>3 Credits</b>
<b>Course Outcome</b>	After going through this course, the students will be able to: <ol style="list-style-type: none"> <li>1. Define the basic concepts and terminologies regarding air pollution and noise pollution</li> <li>2. Describe the physics of air pollution and noise pollution</li> <li>3. Apply the methods of air pollution and noise pollution measurements</li> <li>4. Analyze different concepts of air and noise pollution solving mathematical problems</li> <li>5. Compare air and noise quality with allowable standards and limits</li> <li>6. Choose and design proper techniques for air pollution control and noise pollution control</li> </ol>		
<b>Prerequisite</b>	Class-XII level knowledge of Physics, Chemistry, Mathematics, Biology and Environmental Science; Undergraduate level knowledge of Statistics and Environmental Engineering		
<b>Module 1</b>	<b>Air Pollutants</b> Sources; Classification; Effects on Human, Vegetation, Material Effects of Air pollution on Atmosphere: Photochemical Smog, Ozone Layer Depletion, Acid Rain, Greenhouse Effect and Global Warming	4L+2T	
<b>Module 2</b>	<b>Air Pollution Meteorology</b> Lapse Rate; Atmospheric Stability; Inversion; Plume Pattern	3L+1T	
<b>Module 3</b>	<b>Dispersion of Air Pollutants</b> Point Source Gaussian Plume Model, Stability Classes, Stability Charts, Design of Stack Height	3L+1T	
<b>Module 4</b>	<b>Air Quality</b> Methods of Measurement: Gaseous pollutants, Particulate pollutants Air Quality Standards and Indices: Ambient Air Quality Standard, NAAQS, Emission Standard, Air Quality Indices	4L+2T	
<b>Module 5</b>	<b>Air Pollution Control</b> Control of Gaseous Pollutants: Adsorption, Absorption, Condensation Control of Particulate Pollutants: Settling chambers, Cyclone separators, Wet collectors, Fabric filters, Electrostatic precipitators Control of Pollution from Automobiles	5L+3T	
<b>Module 6</b>	<b>Physics of Noise</b> Basics of Acoustics; Sound Pressure, Power and Intensity and their Interrelations	1L+1T	
<b>Module 7</b>	<b>Measurement of Noise</b> Noise Level; Interrelation between Noise, Pressure, Power and Intensity Levels; Noise Meter; Noise Networks; Frequency Band Analysis; Decibel	4L+2T	

**Maulana Abul Kalam Azad University of Technology, West Bengal**  
(Formerly West Bengal University of Technology)

**Syllabus for B. Tech in Civil Engineering**  
(Applicable from the academic session 2018-2019)

	Addition Measurement of Community Noise: $L_N$ , $L_{eq}$ , $L_{dn}$ , $L_{NP}$			
<b>Module 8</b>	<b>Source and Effect of Noise</b> Psychoacoustics and noise criteria; effects of noise on health; annoyance rating schemes	1L+1T		
<b>Module 9</b>	<b>Noise Pollution Control</b> Noise Standards and Limits; Methods of Noise Pollution Control	3L+1T		
<b>Reference</b>	<b>Sl.</b>	<b>Book Name</b>	<b>Author</b>	<b>Publishing House</b>
	1	Introduction to Environmental Engineering and Science	Masters, G.M., Ela, W.P.	Prentice Hall / Pearson
	2	Environmental Engineering: A Design Approach.	Sincero, A., Sincero, G.	Prentice Hall

4	Air Pollution	Rao, M.N., Rao, H.V.N.	Tata McGraw Hill	

<b>CE(PE)703B</b>	<b>Physico-Chemical Processes for Water and Wastewater Treatment</b>	2L + 1T	3 Credits	
<b>Course Outcome</b>	On completion of the course the students will be able to: <ol style="list-style-type: none"> <li>1. Define the basic concepts and terminologies regarding physico-chemical treatment of water and wastewater</li> <li>2. Describe the physics, chemistry and hydraulics of different unit operations and processes for water and wastewater treatment</li> <li>3. Analyze different physico-chemical water and wastewater treatment options solving mathematical problems</li> <li>4. Design different physico-chemical treatment processes to treat water and wastewater</li> </ol>			
<b>Prerequisite</b>	Class-XII level knowledge of Physics, Chemistry, Mathematics, Biology and Environmental Science; Undergraduate level knowledge of Engineering Physics, Engineering Chemistry, Fluid Mechanics and Hydraulics and Environmental Engineering			
<b>Module 1</b>	<b>Introduction and Basic Concepts</b> Water purification in natural systems, physical processes, chemical processes and biological processes; Primary, secondary and tertiary treatment; Unit operations, unit processes	2L+2T		
<b>Module 2</b>	<b>Aeration</b> Aeration and Gas Transfer	2L		
<b>Module 3</b>	<b>Sedimentation</b> Sedimentation, different types of settling; sedimentation tank design	3L+1T		
<b>Module 4</b>	<b>Clariflocculation</b> Coagulation and flocculation; Coagulation processes, Stability of colloids; Destabilization of colloids; Destabilization in water and wastewater treatment; Transport of colloidal particles; Design aspects	4L+2T		
<b>Module 5</b>	<b>Filtration</b> Filtration processes; Hydraulics of flow through porous media; Rate control patterns and methods; Filter effluent quality parameters; Mathematical model for deep granular filters; Slow sand filtration, Rapid sand filtration, Precoat filtration; design aspects	4L+2T		
<b>Module 6</b>	<b>Disinfection</b> Types of disinfectants; Kinetics of disinfection; Chlorination and its theory; Design of Chlorinators	3L+1T		
<b>Module 7</b>	<b>Precipitation</b> Hardness removal; Iron, Manganese, and Heavy metal removal	3L+1T		
<b>Module 8</b>	<b>Adsorption</b> Adsorption equilibria and adsorption isotherm; Rates of adsorption; Sorption kinetics in batch reactors; Continuous reactors; Factors affecting adsorption	3L+1T		
<b>Module 9</b>	<b>Ion Exchange Processes</b> Materials and reactions; Methods of operation; Application; Design aspects	3L+1T		
<b>Module 10</b>	<b>Membrane Processes</b> Reverse osmosis, Ultrafiltration, Electrodialysis	3L+1T

<b>CE(PE)703C</b>	<b>Water and Air Quality Modelling</b>	<b>2L + 1T</b>	<b>3 Credits</b>	
<b>Course Outcome</b>	On completion of the course the students will be able to: 1. Define the basic concepts and terminologies regarding water and air quality modelling 2. Describe the background mechanisms in modeling water and air quality 3. Analyze different water and air quality models solving mathematical problems 4. Apply the concepts of air and water quality modeling in air and water pollution control and management			
<b>Prerequisite</b>	Class-XII level knowledge of Physics, Chemistry, Mathematics, Biology and Environmental Science; Undergraduate level knowledge of Engineering Statistics, Engineering Physics, Engineering Chemistry, Fluid Mechanics and Hydraulics and Environmental Engineering			
<b>Module 1</b>	<b>Introduction to Water Quality Models</b> Introduction to mathematical models; Water quality model development; Calibration and verification; Cost benefit analysis using models; Model requirements and limitations	4L+2T		
<b>Module 2</b>	<b>Dissolved Oxygen Model for Streams</b> Sources and sinks of dissolved oxygen; Estimation of system parameters; Streeter Phelps model, oxygen 'sag' curve, Determination of deoxygenation and re-aeration coefficients; Benthic oxygen demand; Mass transport mechanisms	6L+2T		
<b>Module 3</b>	<b>Models for Estuary and Lakes</b> Physical chemical and biological processes in estuaries and lakes	4L+2T		
<b>Module 4</b>	<b>Introduction to Air Quality Models</b> Micrometeorological processes, Wind rose, Dispersion, coefficients and Stability classes	4L+2T		
<b>Module 5</b>	<b>Dispersion Models</b> Point Source Gaussian Dispersion Model, Stack height computation; Line Source Models; Box Models	7L+3T		
<b>Module 6</b>	<b>Air Quality Models</b> Regional air quality models, Source inventories and significance	4L+2T		
<b>Reference</b>	<b>Sl.</b>	<b>Book Name</b>	<b>Author</b>	<b>Publishing House</b>

	2	Environmental Engineering	Peavy, H.S, Rowe, D.R, Tchobanoglous, G	Tata McGraw Hill Indian Edition
	3	Introduction to Environmental Engineering and Science.	Masters, G.M., Ela, W.P.	Prentice Hall / Pearson

<b>CE(PE)704A</b>	<b>Structural Dynamics</b>	<b>2L + 1T</b>	<b>3 Credits</b>
<b>Course Outcome</b>	At the conclusion of this course, the students will have an understanding of: 1. Fundamental theory of dynamic equation of motion 2. Fundamental analysis methods for dynamic systems 3. Dynamic properties and behaviour of civil structures		

**Maulana Abul Kalam Azad University of Technology, West Bengal**  
(Formerly West Bengal University of Technology)

**Syllabus for B. Tech in Civil Engineering**  
(Applicable from the academic session 2018-2019)

	4. Modelling approach of dynamic response in civil engineering applications			
<b>Prerequisite</b>	Introduction to Solid Mechanics (CE(ES)402), Structural Analysis – I (CE(PC)503), Structural Analysis – II (CE(PE)602B), and Engineering Mathematics (Differential Equation)			
<b>Module 1</b>	<b>Basics of Structural Dynamics:</b> Introduction of Structural Dynamics, Differential Equations in Civil Engineering, Types of Analysis/Static and Dynamic load, Degrees of Freedom (Ex: Generation of Stiffness matrix), Dynamic Equilibrium Equation.		3L+2T	
<b>Module 2</b>	<b>Free Vibration of SDOF:</b> Undamped free Vibration, Natural Period/Frequency, Energy in Free Vibration, Damped Free Vibration, Types of damping, Logarithmic decrement equation <b>Forced Vibration of SDOF:</b> Undamped Forced vibration, Amplitude & Phase Angle, Dynamic amplification factor for deflection (Rd), Damped Forced vibration, Relationship between Rd, Rv and Ra		8L+4T	
<b>Module 3</b>	<b>Force Transmission, Vibration Measurement:</b> Resonant frequency and Half power band width, Force Transmission and Isolation, Design of Vibration Measuring Instruments		3L+1T	
<b>Module 4</b>	<b>Response to Arbitrary Motions:</b> Response to Unit Impulse, : Response to Arbitrary Force (Duhamel's Integral), Response to Step and Ramp Forces, Response to Rectangular Pulse, Half Sinusoidal wave		2L	
<b>Module 5</b>	<b>Numerical Methods of Solution:</b> Time Stepping Methods, Central Difference Method, Newmark's Method		2L	
<b>Module 6</b>	<b>Response Spectrum:</b> Concept of Response Spectrum, Uses of Response Spectrum, Special Cases in Spectrum, Development of Tripartite Plot, :Example: Base Shear and Base Moment, Response of Structure in Frequency Domain		3L+2T	
<b>Module 7</b>	<b>Multi-Degree of Freedom Systems:</b> Equation of Motion for MDOF System, Solution of Equation, Natural Frequencies and mode Shapes (60), Modal Orthogonality, Approximate Method for finding Natural frequency.		2L+1T	
<b>Module 8</b>	<b>Earthquake Response of MDOF Systems:</b> Time History Analysis, Response Spectrum Analysis, 3D Dynamic Analysis		2L	
<b>Module 9</b>	<b>Dynamic Response of Continuous Systems:</b> Vibration of Continuous systems, Shear behaviour and bending behaviour, Generalized SDOF		2L	
<b>Module 10</b>	<b>Dynamics of Rigid Blocks:</b> Dynamics of Rigid Blocks, Non Structural Elements, : Floor Response Spectrum		2L	
<b>Module 11</b>	<b>Vibration Control:</b> : Introduction to Vibration Control, Active Control, Passive Control, Design of Tuned Mass Damper		2L+1T	
<b>Reference</b>	<b>Sl.</b>	<b>Book Name</b>	<b>Author</b>	<b>Publishing House</b>
	1	Structural Dynamics (Theory and Computation)	Mario Paz.	CBS Publishers
	2	Dynamics of Structure (Theory and Application to Earthquake Engineering)	A.K.Chopra	Pearson Education
	3	Dynamics of Structures	Ashok K. Jain	Pearson Education

<b>CE(PE)704B</b>	<b>Advanced Structural Analysis</b>	2L + 1T	3 Credits	
<b>Course Outcome</b>	After going through this course, the students will be able to: 1. Basic Knowledge of the student will increase. 2. Student will be able to apply stiffness and flexibility method using system approach. 3. Student will understand the yield conditions from their knowledge of stress-strain relations. 4. Student will be able to solve simple plate and shell problems			
<b>Prerequisite</b>	Introduction to Solid Mechanics (CE(ES)402), Structural Analysis – I (CE(PC)503), Structural Analysis – II (CE(PE)602B)			
<b>Module 1</b>	<b>Matrix methods of structural analysis:</b> Application of matrix methods to plane truss, beams, continuous frames		9L+5T	
<b>Module 2</b>	<b>Finite difference and relaxation technique</b> -application to simple problems.		6L+3T	
<b>Module 3</b>	<b>Theory of plate bending:</b> Navier's Solutions. Levy's solution. Plate buckling problem. Membrane theory of domes and cylindrical shells.		7L+3T	
<b>Module 4</b>	<b>Theory of Elasticity:</b> Three dimensional stress and strain analysis, stress strain transformation, stress invariants, equilibrium and compatibility equations. Two dimensional problems in Cartesian and polar coordinates. Plane stress, plane strain problems, St. Venant's principle		6L+1T	
<b>Reference</b>	<b>Sl.</b>	<b>Book Name</b>	<b>Author</b>	<b>Publishing House</b>
	1	Matrix, finite element, computer and	Mukhopadhyay	ANE Books

(Applicable from the academic session 2018-2019)

		structural analysis,		
	2	Intermediate Structural analysis	Wang	McGrawHill
	3	Theory of Plates and Shells	Timoshenko & Krieger	McGrawHill
	4	Theory of Elasticity	Timoshenko & Goodier	McGrawHill
	5	Analysis of Structures	T.S. Thandavamoorthy	Oxford University Press

<b>CE(PE)704C</b>	<b>Coastal Hydraulics and Sediment Transport</b>		2L + 1T	3 Credits
<b>Course Outcome</b>	On successful completion of this course, student should be able to: <ol style="list-style-type: none"> <li>1. Explain and quantify coastal wave processes including wave generation, propagation, refraction, shoaling, diffraction, and breaking.</li> <li>2. Explain and quantify coastal wave properties important to coastal engineering, including wave heights, speeds, induced water velocities, pressures, making appropriate approximations for deep and shallow waters.</li> <li>3. Characterize and quantify basic coastal sediment transport processes and rates</li> <li>4. Analyse coastal sites to determine design waves by utilizing historical and bathymetric data. Estimate hydrodynamic forces on coastal structures</li> </ol>			
<b>Prerequisite</b>	Introduction to Civil Engineering CE(HS)302, Introduction to Fluid Mechanics CE(ES)401, Water Resources Engineering CE(PC)603,			
<b>Module 1</b>	<b>Introduction:</b> Basic understanding of wave mechanics including wave generation, propagation, form and assessment in the coastal zone. Statistical and spectral analysis of recorded wave data and prediction in coastal zone.			6L
<b>Module 2</b>	<b>Tides and currents:</b> The equilibrium tide, Dynamic modifications of the equilibrium tide, Modification of tidal pattern, Tidal streams, Tidal bores.			6L
<b>Module 3:</b>	<b>Waves:</b> The linear theory of waves, Waves of finite height, Wind waves, Waves in shoaling water, Refraction of waves, Reflection of waves, Diffraction of waves, Oscillations in a harbour, Ship waves.			8L
<b>Module 4:</b>	<b>Sediment Transport:</b> Basic concepts, Transport modes, Material in suspension, Bed-Load, Turbidity and density currents, Banks and channels in river estuaries, Regime of the sea-bed; Vertical distribution of suspended sediment in waves and current over a plane bed.			8L
<b>Module 5:</b>	<b>Littoral drift:</b> Definition of limit for littoral drift, The effect of grain size, The beach profile, Longshore transport of material, Coastal features.			8L
<b>Module 6:</b>	<b>Coastal Structures:</b> Types and use; Effect of construction of coastal structures on stability of shoreline/ beaches, shoreline configuration.			6L
<b>Reference</b>	<b>Sl.</b>	<b>Book Name</b>	<b>Author</b>	<b>Publishing House</b>
	1	Coastal hydrodynamics	J. S. Mani	Prentice-Hall of India Ltd, 2012
	2	Advances in Coastal Hydraulics	V. Panchang, J. Kaihatu	World Scientific Publishing Company, 2018
	3	Basic Coastal Engineering	R. M. Sorensen	Springer, 2010
	4	Computational Modeling in Hydraulic and Coastal Engineering	C. Kouttias and P. D. Scarlatos	CRC Press, 2016.

<b>CE(PE)705A</b>	<b>Railway and Airport Engineering</b>		2L + 0T	2 Credits
<b>Course Outcome</b>	Students will be able to <ol style="list-style-type: none"> <li>6. Explain the basics in planning functional components of Railway and Airport.</li> <li>7. Illustrate the engineering concepts of construction, operation and maintenance of Railway and Airport components.</li> <li>8. Interpret the geometric design parameters of Railway</li> <li>9. Decide the runway orientation of proposed runway on the basis of previous wind data analysis</li> <li>10. Assess the basic runway length parameters.</li> </ol>			
<b>Prerequisite</b>	Class-XII level knowledge of Physics, Mathematics.; Undergraduate level knowledge of Strength of Materials.			
<b>Module 1</b>	<b>Railway Engineering</b> Introduction to Railway Engineering: Socio-economic impact of Indian Railways; Zonal classification of Indian Railways; Railway track gauge; Classification of Indian Railways based on Speed Criteria.			20L

**Maulana Abul Kalam Azad University of Technology, West Bengal**  
(Formerly West Bengal University of Technology)

**Syllabus for B. Tech in Civil Engineering**  
(Applicable from the academic session 2018-2019)

	Permanent Way (P-way): Components – Rails, Rail joints, Sleepers, Ballast, Fastenings, Sub-grade. Track Alignment and Engineering Survey: Basic requirement of good alignment; Factors in selection of good alignment; Engineering Survey. Track Stresses; Geometric Design: Gradient, Speed, Degree of Curve, Super-elevation, Transition curve, Widening of gauge on curves, Shift. Points and Crossings; Station and Yards; Signalling and Control Systems.																					
<b>Module 2</b>	<b>Airport Engineering</b> Airport Site Selection; Airport layout; Functions and planning of the Airfield components – runway, taxiway and Aprons, hanger, terminal building and control tower; Design of Runway and Taxiway; Runway orientation: Windrose diagrams.	10L

<b>CE(PE)705B</b>	<b>Pavement Design</b>	2L + 0T	2 Credits																								
<b>Course Outcome</b>	At the end of the course, the student will be able to: <ol style="list-style-type: none"> <li>Differentiate between different types of pavements, both structurally and functionally.</li> <li>Conduct Axle Load Survey and Estimate Design Traffic.</li> <li>Analyze and design bituminous and cement concrete pavement using.</li> <li>Understand the principles of Pavement Maintenance and identify various pavement distresses.</li> </ol>																										
<b>Prerequisite</b>	Transportation Engineering (CE(PC)506)																										
<b>Module 1</b>	<b>Pavement Design</b> Flexible Pavement Design: Stresses and Deflections in homogeneous masses.; Burmister's two layer theory; Three layer and multi-layer theories; wheel load stresses, various factors in traffic wheel loads; ESWL of multiple wheels; McLeod method of design; AASTHO method of flexible pavement design. Low Volume Rigid Pavement: Criteria of Load, Scope and Specifications as per different Govt policies in India, Design Criteria.		13L																								
<b>Module 2</b>	<b>Pavement Construction and Management</b> Flexible Pavement Construction: Earthwork (Method of Alignment-wise marking using chainage), compaction of embankments, construction methods and field control checks for various types of flexible pavement materials in sub-base, base, binder and surface course layers; Construction procedure of Low Volume Rigid Pavement.		9L																								
<b>Module 3</b>	<b>Pavement Evaluation - Pavement Distress</b> Functional condition evaluation of pavements- Roughness, Skid Resistance, Serviceability Index; Structural evaluation of pavements –Benkelman beam and Falling Weight Deflectometer; Pavement strengthening; Design of bituminous and concrete overlays as per IRC		8L

**Maulana Abul Kalam Azad University of Technology, West Bengal**  
*(Formerly West Bengal University of Technology)*  
**Syllabus for B. Tech in Civil Engineering**  
 (Applicable from the academic session 2018-2019)

	Indian Road Congress	
--	----------------------	--

<b>CE(PE)705C</b>	<b>Transportation System Planning</b>	2L + 0T	2 Credits
<b>Prerequisite</b>	Transportation Engineering (CE(PC)506)		
<b>Module 1</b>	<b>Introduction</b> Importance of transportation, transportation planning methodology, hierarchical levels of planning and its relation to rural, urban areas. Long range planning, Passenger and goods transportation, General concept and process of transport planning, Land-use transport interactions, Socio-economic characteristics of Land use		5L
<b>Module 2</b>	<b>Transportation System</b> Multi modal transportation system; Characteristics of Mass Transit systems including technical, demand operational and economic problems, fixed Track Facility, Mass Rapid Transit System Elevated, Surface and Underground construction , integrated Operating Characteristics of Terminal and Transfer facilities		10L
<b>Module 3</b>	<b>Transport planning</b> Studies: Urban Travel Characteristics, Private and Public Behaviour analysis, Transportation demand Surveys, Delineation of the urban area, zoning, Origin-Destination Studies, Home Interviews, trip Classification. Methodology: Study of existing network-trip generation techniques, Category analysis, multiple regression techniques, Modal split analysis, Trip distribution techniques, Growth Factor model, Gravity models, Opportunity models and multiple regression models.		15L

**Semester VIII [Fourth year]**

<b>CE(HS)801A</b>	<b>Professional Practice, law &amp; Ethics</b>	2L	2 Credits
<b>Module 1</b>	<b>Professional Practice</b> – Respective roles of various stakeholders: Government(constituting regulatory bodies and standardization organizations, prescribing norms to ensure safety of the citizens); Standardization Bodies (ex. BIS, IRC)(formulating standards of practice);professional bodies (ex. Institution of Engineers(India), Indian Roads Congress, IIA/COA, ECI, Local Bodies/ Planning Authorities) (certifying professionals and offering platforms for interaction);Clients/ owners (role governed by contracts); Developers (role governed by regulations such asRERA); Consultants (role governed by bodies such as CEAI); Contractors (role governed by contracts and regulatory Acts and Standards); Manufacturers/ Vendors/ Service agencies (rolegoverned by contracts and regulatory Acts and Standards) <b>Professional Ethics</b> – Definition of Ethics, Professional Ethics, Business Ethics, Corporate Ethics, Engineering Ethics, Personal Ethics; Code of Ethics as defined in the website of Institution of Engineers (India); Profession, Professionalism, Professional Responsibility, Professional Ethics; Conflict of Interest, Gift Vs Bribery, Environmental breaches, Negligence, Deficiencies in state-of-the-art; Vigil Mechanism, Whistleblowing, protected disclosures.		4L
<b>Module 2</b>	General Principles of Contracts Management: Indian Contract Act, 1972 and amendments covering General principles of contracting; Contract Formation & Law; Privacy of contract; Various types of contract and their features; Valid & Voidable Contracts; Prime and subcontracts; Joint Ventures & Consortium; Complex contract terminology; Tenders, Request For Proposals, Bids & Proposals; Bid Evaluation; Contract Conditions & Specifications; Critical /“Red Flag” conditions; Contract award & Notice To Proceed; Variations & Changes in Contracts; Differing site conditions; Cost escalation; Delays, Suspensions & Terminations; Time extensions &Force Majeure; Delay Analysis; Liquidated damages & Penalties; Insurance & Taxation; Performance and Excusable Non-performance; Contract documentation; Contract Notices; Wrong practices in contracting (Bid shopping, Bid fixing, Cartels); Reverse auction; Case Studies; Build-Own-Operate & variations; Public- Private Partnerships; International Commercial Terms;		18L

**Maulana Abul Kalam Azad University of Technology, West Bengal**  
(Formerly West Bengal University of Technology)

**Syllabus for B. Tech in Civil Engineering**  
(Applicable from the academic session 2018-2019)

<b>Module 3:</b>	Arbitration, Conciliation and ADR (Alternative Dispute Resolution) system: Arbitration – meaning, scope and types – distinction between laws of 1940 and 1996; UNCITRAL model law – Arbitration and expert determination; Extent of judicial intervention; International commercial arbitration; Arbitration agreements – essential and kinds, validity, reference and interim measures by court; Arbitration tribunal – appointment, challenge, jurisdiction of arbitral tribunal, powers, grounds of challenge, procedure and court assistance; Award including Form and content, Grounds for setting aside an award, Enforcement, Appeal and Revision; Enforcement of foreign awards – New York and Geneva Convention Awards; Distinction between conciliation, negotiation, mediation and arbitration, confidentiality, resort to judicial proceedings, costs; Dispute Resolution Boards; Lok Adalats.	5L		
<b>Module 4:</b>	Engagement of Labour and Labour & other construction-related Laws: Role of Labour in Civil Engineering; Methods of engaging labour- on rolls, labour sub-contract, piece rate work; Industrial Disputes Act, 1947; Collective bargaining; Industrial Employment ( Standing Orders) Act,1946; Workmen’s Compensation Act, 1923; Building & Other Construction Workers (regulation of employment and conditions of service) Act (1996) and Rules (1998); RERA Act 2017, NBC 2017	2L		
<b>Module 5:</b>	Law relating to Intellectual property: Introduction – meaning of intellectual property, main forms of IP, Copyright, Trademarks, Patents and Designs, Secrets; Law relating to Copyright in India including Historical evolution of Copy Rights Act, 1957, Meaning of copyright – computer programs, Ownership of copyrights and assignment, Criteria of infringement, Piracy in Internet – Remedies and procedures in India; Law relating to Patents under Patents Act, 1970 including Concept and historical perspective of patents law in India, Patentable inventions with special reference to biotechnology products, Patent protection for computer programs, Process of obtaining patent – application, examination, opposition and sealing of patents, Patent cooperation treaty and grounds for opposition, Rights and obligations of patentee, Duration of patents – law and policy considerations, Infringement and related remedies;	1L

<b>CE(PE)801A</b>	<b>GIS &amp; Remote Sensing</b>	<b>2L</b>	<b>2 Credits</b>
<b>Course Outcome</b>	Upon completing the course, the students will be able to: <b>14.</b> Define and state the scope GIS & remote sensing in civil engineering <b>15.</b> Understand the basic principles of remote sensing and GIS <b>16.</b> Apply the various methods of remote sensing and GIS to different geospatial datasets <b>17.</b> Analyze the different results obtained from different remote sensing data sources <b>18.</b> Evaluate the different results in solving real world problems. <b>19.</b> Design and construct optimum solutions for real world problems that can be resolved by GIS & remote sensing		
<b>Prerequisite</b>	Knowledge of Class-XII level physics, computer science Knowledge of CE(PC)404 and CE(PC)494		
<b>Module 1</b>	<b>Fundamentals of Remote Sensing:</b> Energy sources and radiation principles; Electromagnetic Spectrum; Energy interactions in the atmosphere and with earth surface features; Atmospheric windows; Spectral response patterns and spectral signatures		3L
<b>Module 2</b>	<b>Digital Image Processing:</b> Image rectification and restoration; Image enhancement; Image classification; Accuracy assessment; Digital change detection; Spatial, spectral, radiometric and temporal resolution characteristics of IRS, Landsat and Sentinel data.		6L
<b>Module 3:</b>	<b>Advanced Remote Sensing:</b> Microwave remote sensing: Frequency and wavelengths, polarization, range and azimuth resolution, relief displacement, foreshortening, layover, shadows and speckles; Synthetic Aperture Radar (SAR); Indian microwave sensors; Working principles of LiDAR remote sensing		3L
<b>Module 4:</b>	<b>Advanced Digital Image Processing:</b>		3L

**Maulana Abul Kalam Azad University of Technology, West Bengal**  
(Formerly West Bengal University of Technology)

**Syllabus for B. Tech in Civil Engineering**  
(Applicable from the academic session 2018-2019)

	Principal Component Analysis (PCA); Colour Space Transformation; Fourier Transformation; Image fusion; Hybrid classification system			
<b>Module 5:</b>	<b>GIS:</b> Definition, components and applications of GIS; Spatial and attribute data; Raster vs. Vector GIS; Concept of topology; Non-topological data structures	3L		
<b>Module 6</b>	<b>Database and Coordinate System:</b> Concepts of Relational Data Base Management System (RDBMS) and geodatabase; Spatial and attribute query; Datum and projection; Universal Transverse Mercator (UTM) grid system; On-the-fly projection	3L		
<b>Module 7</b>	<b>Spatial Data Analysis:</b> Concepts of local, focal, zonal and global analysis; Proximity analysis; Distance measurement; Raster and vector overlay; Spatial interpolation; DEM and TIN, Cost surface analysis	6L		
<b>Module 8</b>	<b>Applications of GIS &amp; Remote Sensing:</b> Watershed analysis; Runoff and erosion modelling, Location and allocation analysis; Atmospheric pollution monitoring; Urban growth modelling; Carbon sequestration and climate change	5L

(Applicable from the academic session 2018-2019)

<b>CE(PE)801C</b>	<b>Environmental Laws and Policy</b>	<b>2L</b>	<b>2 Credits</b>	
<b>Course Outcome</b>	Upon completing the course, the students will be able to: <ol style="list-style-type: none"> <li>1. To apply the relevant measures to mitigate pollution from different sources.</li> <li>2. To understand the effects of the various pollutants on the environment as a whole according to the formulated guidelines</li> <li>3. To be able to give recommendations for alternatives to reduce pollution</li> <li>4. To formulate standards of the various parameters corresponding to their impact on the environment with changing time</li> </ol>			
<b>Prerequisite</b>	Basic Science, Biology, Environmental Sciences and Environmental Engineering (Including Air Quality Dispersion, Meteorology, Solid Waste Management, EIA)			
<b>Module 1</b>	<b>Introduction:</b> Environment, Nature, Ecosystem, Origin of Environmental laws, Concept of laws and policies, Environment and Governance		3L	
<b>Module 2</b>	<b>Sustainable Development and Environment:</b> Understanding of Climate change Concept of Carbon Footprint, Carbon Credit, Carbon Offsetting Use of Hybrid Energy (Conventional +Non Conventional) Use of Clean Development Mechanism		6L	
<b>Module 3:</b>	<b>Environmental Laws (Indian Perspective) :</b> Indian Environmental Laws and Policies		8L	
<b>Module 4:</b>	<b>Environmental Laws (International Perspective) :</b> Fundamental Principles and Application of International Environmental Law, Introduction to Trade and Environment Right to Environment as Human Right International Humanitarian Law and Environment Environment and Conflict Management Focus on International Protocols- UNFCCC & Kyoto Protocol, Treaty on Antarctic & Polar Regions, UN Conventions of Law of the Sea and Regional Sea Convention, Law on International Water Courses		11L	
<b>Reference</b>	<b>Sl.</b>	<b>Book Name</b>	<b>Author</b>	<b>Publishing House</b>
	1	Environmental Law and Policy	Aruna Venkat.	PHI Publication.
	2	Environmental Law and Policy	James Salzman & Burton H. Thompson (Jr.),	Foundation Press.
	3	Environmental Law	Gurdip Singh	Eastern Book Company
	4	Climate Change, Law, Policy and Governance	Usha Tandon	Eastern Book Company.

<b>CE(PE)801D</b>	<b>Pavement Materials</b>	<b>2L</b>	<b>2 Credits</b>
<b>Module 1</b>	<b>Introduction</b> Basic road construction materials : Types of basic materials, Suitability of different materials depends on their availability and characteristics, Economic, Environmental, and Social issues of material usage, Life cycle analysis and its use in design		3L
<b>Module 2</b>	<b>Soil</b> Classification; Index & Engineering properties of soil, Properties of sub-grade; Suitability of different type of soil for the construction of highway embankments and pavement layers; Field compaction and control. <b>Introduction to Soil Stabilization: Physical and Chemical modification:</b> Stabilization with admixtures like cement, lime, calcium chloride, fly ash and bitumen. A critical look at the different laboratory and in-situ procedures for evaluating the mechanical properties of soils viz. CBR, Plate Load test, resilient modulus, DCPT		7L
<b>Module 3:</b>	<b>Aggregate</b> Characterization: Origin, classification, properties. Tests and specifications on road aggregates for flexible and rigid pavements. Importance of aggregate gradation problems on Rothfutch's and Critical sieve methods and Shape factor in mix design		6L
<b>Module 4:</b>	<b>Bitumen Binders</b> Different types, properties and uses, Tests on bitumen, Rheological and pavement performance related properties, Criteria for selection of different binders. Marshall Method of mix design, Additives & Modifiers in Bituminous		6L

**Maulana Abul Kalam Azad University of Technology, West Bengal**  
(Formerly West Bengal University of Technology)

**Syllabus for B. Tech in Civil Engineering**  
(Applicable from the academic session 2018-2019)

	mixes, problems on mix design			
<b>Module 5:</b>	<b>Cement</b> Requirements, design of mix for CC pavement, use of additives, IRC specifications & Tests, joint filler and sealer materials.			3L
<b>Module 6:</b>	<b>Modern trend of using Modified, Sustainable and Environment friendly materials</b> Geo-Synthetics: Geo-synthetic clay liner – Construction details – Geo Synthetic Materials – Functions – Property characterization Modified bitumen: Crumb Rubber Modified bitumen, Natural rubber modified bitumen, polymer modified bitumen; Long term and short term ageing and its effect on bitumen performance Plastic waste: Types of polymer, applicability of polymer based waste product in different layers of pavement			4L

<b>CE(OE)801A</b>	<b>Human Resource Development and Organizational Behaviour</b>			2L	2 Credits
<b>Module 1</b>	<b>Organizational Behaviour:</b> Definition, Importance, Historical Background, Fundamental Concepts of OB, Challenges and Opportunities for OB			2L	
<b>Module 2</b>	<b>Personality and Attitudes:</b> Meaning of personality, Personality Determinants and Traits, Development of Personality, Types of Attitudes, Job Satisfaction			2L	
<b>Module 3:</b>	<b>Perception:</b> Definition, Nature and Importance, Factors influencing Perception, Perceptual Selectivity, Link between Perception and Decision Making.			2L	
<b>Module 4:</b>	<b>Motivation:</b> Definition, Theories of Motivation - Maslow’s Hierarchy of Needs Theory, McGregor’s Theory X & Y, Herzberg’s Motivation-Hygiene Theory, Alderfer’s ERG Theory, McClelland’s Theory of Needs, Vroom’s Expectancy Theory.			4L	
<b>Module 5</b>	<b>Group Behaviour:</b> Characteristics of Group, Types of Groups, Stages of Group Development, Group Decision Making.			2L	
<b>Module 6</b>	<b>Communication:</b> Communication Process, Direction of Communication, Barriers to Effective Communication			2L	
<b>Module 7:</b>	<b>Leadership:</b> Definition, Importance, Theories of Leadership Styles			2L	
<b>Module 8:</b>	<b>Organizational Politics:</b> Definition, Factors contributing to Political Behaviour.			2L	
<b>Module 9:</b>	<b>Conflict Management:</b> Traditional vis-a-vis Modern View of Conflict, Functional and Dysfunctional Conflict, Conflict Process, Negotiation – Bargaining Strategies, Negotiation Process.			3L	
<b>Module 10:</b>	<b>Organizational Design:</b> Various Organizational Structures and their Effects on Human Behaviour, Concepts of Organizational Climate and Organizational Culture.			4L

<b>CE(OE)801B</b>	<b>Bridge Engineering</b>	2L	2 Credits
<b>Course Outcome</b>	After going through this course, the students will be able to: <ol style="list-style-type: none"> <li>1. Discuss basic definitions, types, and components of bridges.</li> <li>2. Discuss sub-surface investigations required for bridge construction.</li> <li>3. Understand standard specification and loads for bridge design.</li> <li>4. Perform design of different types bearings and joints for bridges.</li> <li>5. Perform design of various reinforced concrete and steel bridges.</li> </ol>		
<b>Prerequisite</b>	Design of RC Structures (CE(PC)501), Structural Analysis – I (CE(PC)503), Design of Steel Structures (CE(PC)604).		
<b>Module 1</b>	<b>Introduction:</b> Definition and basic forms, components of a typical bridge, classification of bridges, site investigation, bridge hydrology and hydraulics. <b>Loads:</b> I.R.C loads, impact factors, wind loads, longitudinal forces, lateral forces and centrifugal forces. <b>Bearings:</b> Types of bearings, details of bearing, joints, design examples	3L	
<b>Module 2</b>	<b>Design of reinforced concrete solid slab bridge:</b> Introduction, general design features, economic span, effective width method, simply supported and cantilever slab bridges, analysis and design.	7L	
<b>Module 3</b>	<b>Design of box culvert bridge:</b> Introduction, design method and design example.	4L	
<b>Module 4</b>	<b>Design of a T beam bridge:</b> Introduction, components, design of interior panel of slab, longitudinal and cross girders, Pigeaud's method, design example.	6L	
<b>Module 5</b>	Design of composite bridge: General aspects, method of construction, analysis of composite section, shear connectors, design of composite beam.	4L	
<b>Module 6</b>	<b>Design of steel bridges:</b> General features, types of stress, design of railway truss bridge and plate girder bridge	6L	
<b>Module 7</b>	<b>Design of cable stayed bridge:</b> General features, Philosophy of design.	2L	
<b>IS Codes</b>	1 All relevant IRC and IS codes		
<b>Reference</b>	<b>Sl.</b>	<b>Book Name</b>	<b>Author</b>
	1	Prestressed Concrete Bridges	N. Krishnaraju
	2	Design of Bridge Structures	Jagadish and Jayaram
	3	Essential Bridge Engineering	Jhonson Victor D.
	4	Design of Bridges	N. Krishnaraju
	5	Concrete Structures	Vazirani & Ratwani
	6	Design of concrete bridges	Aswani, Vazirani & Ratwani
	7	Bridge engineering	Ponnuswamy
	8	Principle & Practice of Bridge Engineering	Bindra

<b>CE(OE)801C</b>	<b>Deep Foundations</b>	2L + 0T	2 Credits
<b>Course Outcome</b>	On successful completion of this course, student should be able to: <ol style="list-style-type: none"> <li>11. Explain the concept of bearing capacity for deep foundation.</li> <li>12. Estimate the safe bearing capacity including settlement consideration for deep foundations.</li> <li>13. Select a suitable deep foundation system for various site conditions and also analysis of that.</li> <li>14. Explain in what circumstances pile is needed and how to estimate pile and pile group capacity under various soil conditions Characterize.</li> </ol>		
<b>Prerequisite</b>	Introduction to Civil Engineering CE(HS)302, CE(PE)601 Foundation Engineering, Soil Mechanics – II CE(PC)504, Soil Mechanics – I CE(PC)401.		
<b>Module 1</b>	<b>Piles:</b> types - load carrying capacity of pile - static and dynamic formula - pile load test - penetration test - pile groups - Efficiency - Feld's rule –Converse Labarre formula, Settlement of piles and pile groups - Negative skin friction – under-reamed piles, pile cap	10L	
<b>Module 2</b>	<b>Drilled Pier:</b> Introduction, uses, types, bearing capacity, settlement, construction procedures.	6L	
<b>Module 3:</b>	<b>Cassion foundations:</b> Types & selections, forces & moments, depth determination.	4L	
<b>Module 4:</b>	<b>Well foundations:</b> The Types, components, design of well foundations – grip, size, steining, curb, cutting edge, top & bottom plug, well cap; stability analysis of	8L

CE(OE)801D	Groundwater Contamination			2L + OT	2 Credits
<b>Course Outcome</b>	On successful completion of this course, student should be able to: 1. To be able to understand the principles and theories regarding groundwater contamination with 2. To be able to formulate the various remedial measures for groundwater contamination				
<b>Prerequisite</b>	Basic Sciences, Hydrology, Meteorology and Groundwater Hydrology				
<b>Module 1</b>	<b>Introduction:</b> Definition of groundwater, hydrological properties of various water bearing strata, vertical distribution of subsurface water, groundwater in hydrologic cycle			2L	
<b>Module 2</b>	<b>Groundwater Hydraulics:</b> Darcy's Law, Dupuit's assumption, Application of Darcy's Law for simple flow systems, Governing differential equations for confined and unconfined aquifers, steady and unsteady flow solutions for fully penetrating wells, partially penetrating wells, Interference of wells, Test pumping analysis with steady and unsteady flows, Delayed yield, method of images			7L	
<b>Module 3:</b>	<b>Groundwater quality:</b> Indian & International standards			3L	
<b>Module 4:</b>	<b>Groundwater pollution:</b> Sources, Remedial and preventive measures			3L	
<b>Module 5:</b>	<b>Groundwater conservation:</b> Groundwater budget, seepage from surface water, artificial recharge with reclamation			3L	
<b>Module 6:</b>	<b>Models for Groundwater flow:</b> Sampling & Monitoring methods, transport mechanisms, modeling (advective and dispersive transport), (adsorption and chemical reaction), biodegradation kinetics, numerical flow and transport modeling, waste site characterization/investigation, groundwater remediation, legal issues in groundwater contamination			10L

	1	Personality Development and Soft Skills	Barun K. Mitra	Oxford University
	2	Soft Skills: An Integrated Approach to Maximize Personality	Gajendra Singh Chauhan and Sangeeta Sharma	Wiley
	3	The Ace of Soft Skills: Attitude, Communication and Etiquette for Success	Gopalaswamy Ramesh and Mahadevan Ramesh	Pearson

<b>CE(OE)802B</b>	<b>Earthquake Engineering</b>		<b>2L</b>	<b>2 Credits</b>
<b>Course Outcome</b>	After going through this course, the students will be able to: 1.To provide a coherent development to the students for the courses in sector of earthquake engineering. 2.To present the foundations of many basic engineering concepts related earthquake Engineering 3.To give an experience in the implementation of engineering concepts which are applied in field of earthquake engineering 4.To involve the application of scientific and technological principles of planning, analysis, design of buildings according to earthquake design philosophy.			
<b>Prerequisite</b>	Introduction to Solid Mechanics (CE(ES)402), Structural Analysis – I (CE(PC)503), Structural Analysis – II (CE(PE)602B), Design of RC Structures (CE(PC)501), Structural Dynamics (CE(PE)704A).			
<b>Module 1</b>	<b>Seismology:</b> Earth's Interior and Plate Tectonics; Causes of Earthquakes and Seismic Waves; Measurement of Earthquakes and Measurement parameters; Modification of Earthquake due to the Nature of Soil; Seismic Hazard Analysis			4L
<b>Module 2</b>	<b>Earthquake Inputs:</b> Time History Records and Frequency Contents of Ground Motion; Power Spectral Density Function of Ground Motion; Concept of Response Spectrums of Earthquake; Combined D $\square$ V $\square$ A Spectrum and Construction of Design Spectrum; Site Specific, Probabilistic and Uniform Hazard Spectrums; Predictive Relationships for earthquake parameters;			4L
<b>Module 3</b>	<b>Dynamics for Earthquake Analysis:</b> Equations of Motion for SDOF and MDOF Systems; Undamped Free Vibration of SDOF and MDOF Systems; Mode Shapes and Frequencies of MDOF System; Rayleigh Damping Matrix; Direct Time Domain Analysis of MDOF System; Direct Frequency Domain Analysis of MDOF System; Modal Analysis in Time and Frequency Domain			4L
<b>Module 4</b>	<b>Response Analysis for Specific Ground Motion:</b> Equations of Motion for Single and Multi $\square$ Support Excitations and Solutions; Equations of Motion in State Space and Solutions; Computational Steps for the Solutions using MATLAB; Time History Analysis of 3D Tall Buildings.			4L
<b>Module 5</b>	<b>Response Spectrum Method of Analysis:</b> Concept of Equivalent Lateral Force for Earthquake; Modal Combination Rules; Response Spectrum Method of Analysis of Structures and Codal Provisions; Response Spectrum Method of Analysis for Torsionally Coupled Systems; Response Spectrum Method of Analysis for Non $\square$ Classically Damped Systems;			4L
<b>Module 6</b>	<b>Seismic Soil - Structure Interaction:</b> Fundamentals of Seismic Soil $\square$ Structure Interaction; Direct Method of Analysis of Soil $\square$ Structure 6 Interaction using FEM and Use of ABAQUS, Substructuring Method of Analysis of Soil $\square$ Structure Interaction Problem			4L
<b>Module 7</b>	<b>Inelastic Response of Structures for Earthquake Forces:</b> Fundamental Concepts of Inelastic Response Analysis for Earthquake Forces; Solutions of Incremental Equations of Motions for SDOF Systems; Solutions of Incremental Equations of Motions for MDOF Systems; Push over Analysis; Concepts of Ductility and Inelastic Spectrum;			5L
<b>Module 8</b>	<b>Base isolation for earthquake resistant design of structures:</b> Base isolation concept, isolation systems and their modelling; linear theory of base isolation; stability of elastomeric bearings; codal provisions for seismic isolation, practical applications.			5L

<b>CE(OE)802C</b>	<b>Urban Transport Planning</b>	<b>2L</b>	<b>2 Credits</b>
<b>Module 1</b>	<b>Introduction</b> Urban morphology - Urbanization and travel demand – Urban activity systems and travel patterns – Systems approach – Trip based and Activity based approach		4L
<b>Module 2</b>	<b>Urban Transportation Planning</b> Goals, Objectives and Constraints - Inventory, Model building, Forecasting and Evaluation - Study area delineation – Zoning - UTP survey. Trip generation models – Trip classification - productions and attractions – Trip rate analysis - Multiple regression models - Category analysis. Trip distribution models – Growth factor models, Gravity model and Opportunity modes. Modal split models – Mode choice behavior – Trip end and trip interchange models - Probabilistic models – Utility functions - Logit models - Two stage model. Traffic assignment – Transportation networks – Minimum Path Algorithms - Assignment methods – All or Nothing assignment, Capacity restrained assignment and Multi path assignment - Route-choice behavior.		21L
<b>Module 3</b>	<b>Scope of UTP in present scenario</b> Financing of Project – urban development planning policy - Case studies.		5L
<b>Reference</b>	<b>Sl.</b>	<b>Book Name</b>	<b>Author</b>
	1	Traffic Engineering and Transport Planning	L R Kadiyali
	2	Urban Transportation: Planning, Operation and Management	S Ponnuswamy and Johnson Victor
	3	Transportation Planning: Principles, Practices and Policies	Pradeep Kumar Sarkar and Vinay Maitri

<b>CE(OE)802D</b>	<b>Environmental Impact Assessment and Life Cycle Analyses</b>	<b>2L</b>	<b>2 Credits</b>
<b>Course Outcome</b>	After going through this course, the students will be able to: 1. To understand and evaluate the impact of any activity (large or small scale) on the surrounding environment 2. To be able to formulate mitigation strategies to protect the environment leading to sustainability 3. To be able to understand the intricacies of Life Cycle Analysis and apply basic knowledge for coherent existence		
<b>Prerequisite</b>	Basic Sciences, Biology, Environmental Science and Environmental Engineering		
<b>Module 1</b>	<b>Introduction</b> Definition, Objective with legal aspect of Environmental Impact Assessment (EIA)		2L
<b>Module 2</b>	<b>Methodology</b> for EIA with Base Line Studies, Screening , Scoping and Public Consultation		4L
<b>Module 3</b>	<b>EIA Analysis</b> Data Collection & Environmental Impact Analysis, preparation of EIA report		5L
<b>Module 4</b>	<b>EIA Mitigation and Audit-</b> Mitigation and Impact Management with various case studies, Environmental Audit		5L
<b>Module 5</b>	<b>Introduction to Life Cycle Analysis (LCA):</b> History, Definition, Standards and structure of LCA Goal and Scope of LCA: System of a product with boundary, unit process and functional unit		2L
<b>Module 6</b>	<b>Life Cycle Interpretation and Inventory:</b> Limitation of LCA, Identification of significant issues, Evaluation, Reporting, Critical Review. Inventory: Data Collection, Data Bases, Allocation, Validation		3L
<b>Module 7</b>	<b>LCA Impact Assessment and Practice:</b>		4L

**Maulana Abul Kalam Azad University of Technology, West Bengal**
