

# **MASTER OF COMPUTER APPLICATION**

# (DRAFT SYLLABUS)

Syllabus w.e.f. the Academic Session 2020-2021

MAULANA ABUL K.

<sup>7</sup> TECHNOLOGY

..........

### **Objective:**

To conduct software industry, corporate sector, academia, research-oriented MCA program following the AICTE model for MCA

## **Eligibility:**

Candidates with the following eligibility can take admission in the 2-year MCA program approved by AICTE:

- A. Students who have passed Bachelor of Computer Application or Bachelor's degree in Computer Science Engineering or equivalent degree
- B. Students who have passed Bachelor of Science, Bachelor of Commerce or Bachelor of Arts with mathematics at 10+2 or at the graduation level with additional bridge courses as per the norms of the concerned university
- C. Candidates must have obtained at least 50 percent marks, or 45 percent marks in the case of candidates belonging to reserved categories, in the qualifying examination

### **Duration:**

2 Years (4 Semesters)

### **Program Educational Objectives (PEOs)**

- **PEO 01:** Technical Expertise: Develop the ability to plan, analyze, design, code, implement, test and maintain the software product for real time systems that are technically sound, economically feasible and socially acceptable
- **PEO 02:** Successful Career: Exhibit professionalism, ethical attitude with updated technologies in Computer Application based career and capability to set up their own enterprise in various sectors of Computer Applications
- **PEO 03:** Soft Skills: Develop communication skills, team work and leadership quality in their professional multidisciplinary projects and adapt to current trends by engaging in lifelong learning
- **PEO 04:** Life Long Learning: Prepare the students to pursue higher studies by acquiring knowledge in mathematical, computing and engineering principles in the field of computing and related fields and to work in the fields of teaching and research

### Program Specific Outcomes (PSOs)

The post-graduates of Master of Computer Application Program will demonstrate:

- **PSO 01:** Software System Design and Development: The ability to apply software development life cycle principles to design and develop the application software that meets the automation needs of society and industry.
- **PSO 02:** Computing and Research ability: The ability to employ modern computer languages, environments and platforms in creating innovative career paths in SMAC (Social, Mobile, Analytics and Cloud) technologies.
- **PSO 03:** Professionalism and Ethics: Efficient team leaders, effective communicators and capable of working in multi-disciplinary environment following ethical values.

# Program Outcomes (POs)

On Completion of MCA program, the post-graduates are expected to

- **PO 01:** Engineering Knowledge: Ability to apply knowledge of computing, science, mathematics and engineering fundamentals appropriate to the discipline
- **PO 02: Problem Analysis:** Ability to identify, critically analyze, formulate the computing requirements appropriate to its solution and develop computer applications
- **PO 03: Design/Development of Solutions:** Ability to design, implement and evaluate a computer-based complex system, process, component, or program to meet desired needs with appropriate consideration for public health and safety, cultural, societal and environmental considerations
- **PO 04:** Conduct Investigations of Complex Problems: Use of research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions and develop Software with complete satisfaction to the Customer.
- **PO 05:** Modern Tool Usage: Ability to apply current technologies, skills, and modern IT tools necessary for computing practice with an understanding of the limitations.
- **PO 06:** The Engineer and Society: Ability to understand the impact of system solutions in a contemporary, global, economical, environmental and societal context for sustainable development.
- **PO 07:** Environment and Sustainability: Ability to understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- **PO 08:** Ethics: Ability to discharge their duties with professional and ethical responsibilities as an individual as well as in multidisciplinary teams with positive attitude.
- **PO 09:** Individual and Team Work: Ability to function individually in effective manner and on teams, including diverse and multidisciplinary, to accomplish a common goal.
- **PO 10:** Communication: Ability to communicate effectively with a range of audiences and be customer friendly.
- **PO 11: Project Management and Finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team to manage projects and in multidisciplinary environments and should be economically feasible.
- **PO 12:** Life-Long Learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological changes.

### **Program Structure:**

# **Project: Dissertation + Presentation + Project viva**

# Session:

- Odd Semester/ 1<sup>st</sup> and 3<sup>rd</sup>: July December
- Even Semester/2<sup>nd</sup> and 4<sup>th</sup>): January June
- Lecture Hour: 1 Hour
- Subject wise Lecture per Week: 4

## **Examination System:**

| Subject wise Total Marks:     | 100  |
|-------------------------------|------|
| Semester Grade Point Average: | SGPA |
| Yearly Grade Point Average:   | YGPA |
| Degree Grade Point Average:   | DGPA |

### **Teaching Methodology:**

Lecture, Discussion, Presentation, Case Studies, Group Task, Assignment, Projects, Special Lecture by Industry Professionals

### **General Guidelines:**

The 2-year MCA curriculum will be applicable w.e.f. the academic year 2020 - 2021. All rules and regulation regarding admission, examination, registration, migration and others shall exist according to MAKAUT norms.

# PART – II: DETAILED SYLLABUS

MAKAUT

# Code: MCAN-101

# **Contacts Hours / Week: 4**

Paper: Programming Concept through Python Total Contact Hours: 40

Credit: 4

# **Course Outcome:**

- ✓ Learn, understand and comprehend the concept of programming.
- ✓ Design algorithm to solve simple programming problem.
- $\checkmark$  Understand and remember syntax and semantics of Python.
- ✓ Create application using secondary storage.
- $\checkmark$  Understand and apply library for data analysis.
- ✓ Apply Python to implement different solutions for the same problem and analyze why one solution is better than the other.
- ✓ To write program for real life problem.

| UNIT | COURSE CONTENT   |
|------|--|
|      | Fundamentals of Computer     (6L)  |
| 1    | History of Computers, Basic Anatomy of Computer System, Primary & Secondary Memory,<br>Processing Unit, Input & Output devices. Basic Concepts of Assembly language, High level<br>language, Compiler and Assembler.<br>Number systems (decimal, octal and hexadecimal) with signed and unsigned numbers (using 1's<br>and 2's complement) - their representation, conversion and arithmetic operations.<br>Packed and unpacked BCD system, ASCII. IEEE-754 floating point representation (half- 16 bit,<br>full- 32 bit, double- 64 bit). |
| 2    | Programming Basics (2L)<br>Problem analysis, Flowchart, algorithms, Pseudo codes, structured programming, Example of<br>Flowchart and Algorithm representation   |
| 3    | Variable and Expression (4L)<br>Variables as names for values; expressions (arithmetic and logical) and their evaluation<br>(operators, associativity, precedence). Assignment operation; difference between left hand side<br>and right hand side of assignment, Console input/output: taking input from user and printing user<br>information.   |
| 4    | <b>Control Statement and Iteration</b> (5L)<br>If statement, else-if statement, multiple statements within if, multiple if statement. While Loop,<br>For Loop, Nesting Loops, Controlling Loops using Break and Continue, Else Statement, Range<br>Statement and Pass Statement in Loop.   |
| 5    | Collections(2L)Strings, List, Tuples, Dictionary, Set, Selection sort, Bubble sort   |
| 6    | <b>Function</b> (2L)<br>Built in function, user defined function, function passing values, function returning values, default parameter values, Recursive function   |
| 7    | File Management(4L)Operations on files (opening, modes, attributes, encoding, closing), read() & write() methods,<br>tell() & seek() methods, renaming & deleting files and directories  |
| 8    | Errors and Exception Handling(2L)Dealing with syntax errors, Exceptions, Handling exceptions with try/except, Cleaning up withfinally  |
| 9    | Classes and Objects (5L)<br>Create a Class, Create Object,Init() Function, Methods, Self Parameter, Modification and<br>Deletion of Object Parameter, Deletion of Object, Pass Statement, Inheritance and<br>Polymorphism, Scope, Module, Built-In Math Function, Math Module, Module datetime and<br>Date Objects, RegEx Module andRegEx Functions, Exception Handling.   |
| 10   | Modules & Packages (2L)  |
| 11   | Importing a module, Creating module, Function aliases, packages       (6L)         Numpy       (6L)         ndArray, Pandas: reading files, exploratory data analysis, data preparation and processing, ,  |

# Code: MCAN-102 Contacts Hours / Week: 4

# Paper: Relational Database Management SystemTotal Contact Hours: 40Credit: 4

### **Course Outcome:**

- $\checkmark$  Identify the need for a database over the file system.
- ✓ Understand and implement the process of data insertion, retrieval, and manipulation.
- ✓ Implement SQL concept for a database transaction.
- ✓ Understand and analyze the functional dependencies among attributes of the entity set and normalization between the relations.
- ✓ Evaluate the relational tables, PL/SQL programs, triggers, database files, indexing of RDBMS.
- ✓ Understand and Implement the Transaction control and concurrency control management.
- ✓ Understanding the concept of distributed & object oriented database.

| Basic Concept         (5L)           Database Management System, File based system, Advantages of DBMS over file based system,<br>Database Approach, Logical DBMS Architecture, Three level architecture of DBMS or logical<br>DBMS architecture, Need for three level architecture, Physical DBMS Architecture, Database<br>Administrator (DBA) Functions & Role, Data files indices and Data Dictionary<br>Types of Database, Relational and ER Models: Data Models, Relational Model, Domains, Tuple<br>and Relation, Super keys, Candidate keys , Primary keys and foreign key for the Relations,<br>Relational Constraints, Domain Constraint, Key Constraint , Integrity Constraint, - Update<br>Operations and Dealing with Constraint Violations, Relational Operations<br>Entity Relationship (ER) Model: Entities, Attributes, Relationships, More about Entities and<br>Relational Database.           Patabase Integrity And Normalization<br>Relational Database.         (7L)           Relational Database. #### **Paper: Discrete Mathematics and Combinatorics Contacts Hours / Week: 4 Total Contact Hours: 40** Credit: 3

#### **Course Outcome:**

Code: MCAN-104

After successful completion of this course, students will be able to:

- $\checkmark$  Interpret the problems that can be formulated in terms of graphs and trees.
- $\checkmark$  Explain network phenomena by using the concepts of connectivity, independent sets, cliques, matching, graph coloring etc.
- ✓ Achieve the ability to think and reason abstract mathematical definitions and ideas relating to integers through concepts of well-ordering principle, division algorithm, greatest common divisors and congruence.
- ✓ Apply counting techniques and the crucial concept of recurrence to comprehend the combinatorial aspects of algorithms.
- ✓ Analyze the logical fundamentals of basic computational concepts.
- ✓ Compare the notions of converse, contrapositive, inverse etc. in order to consolidate the comprehension of the logical subtleties involved in computational mathematics.

| UNITS     | COURSE CONTENT   |
|-----------|--|
|           | Logic and Proofs (3L)  |
| 1         | Propositional logic, Propositional equivalences, Predicates and quantifiers, Nested quantifiers,   |
|           | Rules of inference.  |
|           | Principles of Mathematical Induction (5L)  |
| 2         | The Well-Ordering Principle, Recursive definition, The Division algorithm: Prime Numbers,  |
|           | The Greatest Common Divisor: Euclidean Algorithm, The Fundamental Theorem of Arithmetic.   |
|           | Sets and Sequence   (8L)   |
|           | Sets, Relation and Function: Operations and Laws of Sets, Cartesian Products, Binary Relation,   |
| 3         | Partial Ordering Relation, Equivalence Relation, Image of a Set, Sum and Product of Functions,   |
| 5         | Bijective functions, Inverse and Composite Function, Size of a Set, Finite and infinite Sets,  |
|           | Countable and uncountable Sets, Cantor's diagonal argument and The Power Set theorem,  |
|           | Schroeder-Bernstein theorem. Fuzzy set, Basic properties of fuzzy set.   |
|           | Counting and Combinatorics (8L)  |
| 4         | Counting, Sum and product rule, Principle of Inclusion Exclusion. Pigeon Hole Principle,   |
|           | Counting by Bijections. Double Counting. Linear Recurrence relations - methods of solutions.   |
|           | Generating Functions. Permutations and Combination.  |
|           | Algebraic Structure (9L)   |
|           | Algebraic Structures with one Binary Operation, Semi Groups, Monoids, Groups, Congruence   |
| 5         | Relation and Quotient Structures, Free and Cyclic Monoids and Groups, Permutation Groups,  |
|           | Substructures, Normal Subgroups, Algebraic Structures with two Binary Operation, Rings, Integral Domain and Fields. Boolean Algebra and Boolean Ring, Identities of Boolean Algebra, |
|           | Duality, Representation of Boolean Function, Disjunctive and Conjunctive Normal Form   |
|           | Graph and Tree (7L)  |
|           | Graphs and their properties, Degree, Connectivity, Path, Cycle, Sub Graph, Isomorphism,  |
|           | Eulerian and Hamiltonian Walks, Graph Colouring, Colouring maps and Planar Graphs,   |
| 6         | Colouring Vertices, Colouring Edges, List Colouring, Perfect Graph, definition properties and  |
|           | Example, rooted trees, trees and sorting, weighted trees and prefix codes, Bi-connected  |
|           | component and Articulation Points, Shortest distances.   |

# **Course Outcome:**

After successful completion of this course, students will be able to:

- ✓ Understand the basic concepts related to Business.
- ✓ Demonstrate the roles, skills and functions of different discipline of business management.
- ✓ To disseminate knowledge among the students inculcate with theoretical structures about banking system
- ✓ Record basic accounting transactions and prepare annual financial statements; and analyse, interpret and communicate the information contained in basic financial statements
- ✓ Analyse and provide recommendations to improve the operations of Organisations through the application of Cost and Management accounting techniques

# ✓ Equip students with in-depth and expert knowledge of Tally ERP with GST.

| 1         | up students with in-depth and expert knowledge of Tally ERP with GST.   |
|-----------|---|
| UNITS     | COURSE CONTENT  |
| 1         | Introduction (3L)   |
|           | Basics of management; Planning, scheduling, organizing, staffing, directing, controlling                                  |
|           | Management (3L)   |
| 2         | Marketing Management, Financial management, Operation management,   |
|           | Human resource management, Management information System  |
|           | Strategy (3L)   |
| 3         | Firm and its environment, strategies and resources, industry structure and analysis, corporate                            |
|           | strategies and its evaluation, strategies for growth and diversification, strategic planning                              |
|           | Business Trade and Banking (3L)   |
|           | Business: Types of business, Sole Proprietorship, Partnership, Limited company and cooperative                            |
| 4         | society – their characteristics.  |
| 4         | Banking: role of commercial banks; credit creation and its importance in industrial functioning.                          |
|           | Role of central bank: Reserve Bank of India.  |
|           | International Business or Trade Environment.  |
|           | Financial Accounting (7L)   |
| 5         | Journals, Ledgers, Trial Balance, Profit & amp; Loss Account, Balance Sheet, Financial                                    |
| 5         | Reporting   |
|           | Financial Statement Analysis and Interpretation (Financial Ratio and Cash Flow analysis)                                  |
|           | Cost Accounting (7L)  |
| 6         | Concepts and Classification of costs, Cost Sheet  |
| 0         | Break Even Analysis, Variance Analysis, Cost-volume profit (CVP) relationship, Cash                                       |
|           | Budgeting   |

# **Course Outcome:**

- After successful completion of this course, students will be able to:
  - ✓ Understand the premises informing the twin themes of liberty and freedom from a civil rights perspective.
  - ✓ To address the growth of Indian opinion regarding modern Indian intellectuals' constitutional role and entitlement to civil and economic rights as well as the emergence of nationhood in the early years of Indian nationalism.
  - ✓ To address the role of socialism in India after the commencement of the Bolshevik Revolution in 1917 and its impact on the initial drafting of the Indian Constitution.

| UNITS     | COURSE CONTENT  |
|-----------|---|
| 1         | History of Making of the Indian Constitution (5L)   |
| 1         | History Drafting Committee, (Composition & Working)   |
| 2         | Philosophy of the Indian Constitution (5L)  |
| Z         | Preamble Salient Features   |
|           | Contours of Constitutional Rights & Duties (5L)   |
| 3         | Fundamental Rights, Right to Equality, Right to Freedom, Right against Exploitation, Right to           |
| 3         | Freedom of Religion, Cultural and Educational Rights, Right to Constitutional Remedies,                 |
|           | Directive Principles of State Policy, Fundamental Duties.   |
|           | Organs of Governance (5L)   |
| 4         | Parliament, Composition, Qualifications and Disqualifications, Powers and Functions,                    |
| 7         | Executive, President, Governor, Council of Ministers, Judiciary, Appointment and Transfer of            |
|           | Judges, Qualifications, Powers and Functions  |
|           | Local Administration (5L)   |
|           | District's Administration head: Role and Importance, Municipalities: Introduction, Mayor and            |
| 5         | role of Elected Representative, CEO of Municipal Corporation. Pachayati raj: Introduction,              |
| -         | PRI: Zila Pachayat. Elected officials and their roles, CEO Zila Pachayat: Position and role.            |
|           | Block level: Organizational Hierarchy (Different departments), Village level: Role of Elected           |
|           | and Appointed officials, Importance of grass root democracy   |
|           | Election Commission (5L)  |
| 6         | Role and Functioning. Chief Election Commissioner and Election Commissioners. State                     |
|           | Election Commission: Role and Functioning. Institute and Bodies for the welfare of SC/ST/OBC and women. |

# Code: MCAN-191

# Contacts Hours / Week: 4

# Paper: Python Programming Lab Total Contact Hours: 40

Credit: 3

# Course Outcome:

- $\checkmark$  To write simple programs relating to different logical problems.
- $\checkmark$  To be able to interpret, understand and debug syntax errors reported by the compiler.
- ✓ Understand and implement the native data types (Python in this course)
- ✓ To implement conditional branching, iteration.
- $\checkmark$  To decompose a problem intofunctions.
- $\checkmark$  To be able to create, read from and write into simple text files.
- $\checkmark$  To understand the basic concept of OOPs
- ✓ To understand and implement Python Numpy Arrray operations

| V 10  | understand and implement Fython Numpy Array operations                                     |
|-------|--|
| UNITS | COURSE CONTENT   |
| 1     | Python Basics: Installing Python, Setting up Path and Environment Variables, Running       |
| 1     | Python, First Python Program   |
|       | Python Data Types & Input/output: Keywords, Identifiers, Python Statement, Indentation,    |
| 2     | Documentation, Variables, Multiple Assignment, Understanding Data Type, Data Type          |
|       | Conversion, Python Input and Output Functions, Import command.                             |
| 3     | Operators and Expressions: Operators in Python, Expressions, Precedence, Associativity of  |
| 3     | Operators, Non Associative Operators.  |
| 4     | Control Structures: Decision making statements, Python loops, Python control statements.   |
| 5     | Python Native Data Types: Numbers, Lists, Tuples, Sets, Dictionary, Functions & Methods of |
| 3     | Dictionary, Strings(in detail with their methods and operations).                          |
| 6     | Python Functions: Built-in Functions, User defined functions, Anonymous functions, Pass by |
| 6     | value, Pass by Reference, Recursion  |
| 7     | Exception Handling: Exceptions, Built-in exceptions, Exception handling, User defined      |
| 1     | exceptions in Python.  |
|       | File Management in Python: Operations on files (opening, modes, attributes, encoding,      |
| 8     | closing), read() & write() methods, tell() & seek() methods, renaming & deleting files in  |
|       | Python, directories in Python.   |
| 9     | Python OOPs  |
| 9     | Python OOPs Concepts, Object Class, Constructors, Inheritance                              |
|       | Python Numpy   |
| 10    | Numpy data types, Operations on Numpy Array (indexing, slicing, shape/reshape, iteration,  |
|       | join, split, search, sort, filter)   |

|          | 1CAN-192 Paper: Relational Database Management System Lab   |
|----------|---|
|          | s Hours / Week: 4 Total Contact Hours: 40 Credit: 3   |
| Course O |   |
|          | cessful completion of this course, students will be able to:  |
|          | rn to use Entity Relationship Diagram (ERD) model as a blueprint to develop the corresponding ational model in a RDBMS system like Oracle DBMS. |
|          | bly DDL component of Structured query language (SQL) to create a relational database from   |
|          | ratch through implementation of various constraints in Oracle RDBMS system.   |
|          | ply DML component of Structured query language (SQL) for storing and modification of data in racle RDBMS system.                                |
|          | bly DQL component of Structured query language (SQL) to construct complex queries for   |
|          | ficient retrieval of data from existing database as per the user requirement specifications.  |
|          | nceptualize and apply various P/L SQL concepts like cursor, trigger in creating database  |
|          |   |
| -        | ograms.   |
|          | velop a fully-fledged database backend system using SQL and P/L SQL programming to  |
|          | tablish overall integrity of the database system.   |
|          | blement PL/SQL function, Procedure and Package and Apply Exception.   |
| UNITS    | COURSE CONTENT  |
|          | Creation of a database based on given ERD Model:  |
|          | SQL Data Definition Language (DDL)  |
|          | Create (and Alter) table structure, Apply (and Alter) constraints on columns/tables viz., primary   |
|          | key, foreign key, unique, not null, check. Verify/ Review the table structure (along with applied   |
| 1        | constraints) using appropriate data dictionary tables like user_constraints, user_cons_columns,   |
| 1        | etc. Create view, materialized view using one or more table.  |
|          | SQL Data Manipulation Language (DML)  |
|          | Insert into rows (once at a time/ and in bulk) from a table, Update existing rows of a table,   |
|          | Delete rows (a few or all rows) from a table.   |
|          | Data Query Language (DQL)   |
|          | Basic select-from-where structure - Usage of Top, Distinct, Null keywords in query, Using   |
|          | String and Arithmetic Expressions, Exploring Where Clause with various Operators and logical  |
|          | combination of various conditions, Sorting data using Order By clause. Usage of IN, LIKE, ALL   |
|          | keywords.   |
|          | Introduction to Joins, Natural Joins, equi-join, non-equi-join, Self-Join, Inner Join, Outer (left,   |
|          | right) Join.  |
|          | Set operations:   |
| 2        | -   |
|          | Unions, Intersect, minus set operations on table data using SQL.  |
|          | Using single row functions in Queries   |
|          | NVL function (to handle ambiguity of null data), upper, lower, to_date, to_char functions, etc.   |
|          | Using group/multiple row functions in Queries like Count, Sum, Min, Max, Avg, etc, using  |
|          | Group By and Having Clause, Using Group By with Rollup and Cube.  |
|          | Sub-query - Working with various nested structure of Sub Queries - use in from or where clause  |
|          | with more than one level of nesting, correlated sub-query- Ranking table data using correlated  |
|          | sub-query.  |
|          | P/L SQL   |
|          | Stored Procedures and Functions- Basic programming constructs of PL / SQL like if, else, else-  |
|          | if, loop, while, for structure  |
|          | Populate stored procedure variables with the data fetched from table using SQL command.   |
| 3        | Working with Cursors - Creating Cursors, parameterized cursor, Locks on cursors, Exploring  |
|          | advantages of cursors.  |
|          | Introduction to triggers - Constraints Vs Triggers, Creating, Altering, Dropping triggers, use of   |
|          | for/ after/ instead of triggers, Using trigger to validate/ rollback a Transaction, Automatically   |
|          | populate integer data based primary key columns (e.g., Id.) using trigger.  |
|          | Persone meger and outer primer, key continue (e.g., tar) using digger.  |

| Package. | Function,<br>n Handling. | Procedure | & | Package – | Create | Function, | Create | Procedure | and | Cre |
|----------|--------------------------|-----------|---|-----------|--------|-----------|--------|-----------|-----|-----|
|          |                          |           |   |           |        |           |        |           |     |     |
|          |                          |           |   |           |        |           |        |           |     |     |
|          |                          |           |   |           |        |           |        |           |     |     |
|          |                          |           |   |           |        |           |        |           |     |     |
|          |                          |           |   |           |        |           |        |           |     |     |
|          |                          |           |   |           |        |           |        |           |     |     |
|          |                          |           |   |           |        |           |        |           |     |     |
|          |                          |           |   |           |        |           |        |           |     |     |
|          |                          |           |   |           |        |           |        |           |     |     |
|          |                          |           |   |           |        |           |        |           |     |     |
|          |                          |           |   |           |        |           |        |           |     |     |
|          |                          |           |   |           |        |           |        |           |     |     |
|          |                          |           |   |           |        |           |        |           |     |     |
|          |                          |           |   |           |        |           |        |           |     |     |
|          |                          |           |   |           |        |           |        |           |     |     |
|          |                          |           |   |           |        |           |        |           |     |     |
|          |                          |           |   |           |        |           |        |           |     |     |
|          |                          |           |   |           |        |           |        |           |     |     |
|          |                          |           |   |           |        |           |        |           |     |     |

# Code: MCAN-201Paper: Data Structure through PythonContacts Hours / Week: 4Total Contact Hours 40Credit: 4

### **Course Outcome:**

After successful completion of this course, students will be able to:

✓ Understand the concept of abstract data type such as stack, queue, linked list, and trees

 $\checkmark$  Chose appropriate data structure to design algorithm to solve the problem.

- $\checkmark$  Analyze the algorithms in the context of efficiency.
- ✓ Apply the knowledge of stack and queue to design algorithm
- ✓ Design application using sorting, searching and the concept of tree.

| UNITS     | COURSE CONTENT   |
|-----------|--|
|           |  |
| 1         | Introduction(6L)Basic Terminologies: Elementary Data Organizations, Data Structure Operations: insertion,<br>deletion, traversal etc.;(6L)Analysis of an Algorithm, Asymptotic Notations, Time-Space trade off.(6L)Searching: Linear Search and Binary Search Techniques and their complexity(6L)  |
| 2         | Stacks and Queues(8L)ADT Stack and its operations: Algorithms and their complexity analysis, Applications of Stacks:<br>Expression Conversion and evaluation – corresponding algorithms and complexity analysis.<br>ADT, queue, Types of Queue: Simple Queue, Circular Queue, Priority Queue; Operations on<br>each type of Queue: Algorithms and their analysis.  |
| 3         | Linked Lists(6L)Singly linked lists: Representation in memory, Algorithms of several operations: Traversing,<br>Searching, Insertion into, Deletion from linked list;<br>Linked representation of Stack and Queue, Header nodes,<br>Doubly linked list: operations on it and algorithmic analysis;<br>Circular Linked Lists: all operations their algorithms and the complexity analysis.  |
| 4         | Trees(6L)Basic Tree Terminologies, Different types of Trees: Binary Tree, Threaded Binary Tree, Binary<br>Search Tree, AVL Tree;Tree operations on each of the trees and their algorithms with complexity analysis.<br>Applications of Binary Trees. B Tree, B+ Tree: definitions, algorithms and analysis.  |
| 5         | <b>Graph</b> (6L)<br>Graph Terminology, Representation of graphs, Path Matrix, Graph Traversal, BFS, DFS,<br>Minimum Spanning Tree, Kruskal's Algorithm and Prim's Algorithm.  |
| 6         | <b>Sorting</b> (8L)<br>Objective and properties of different sorting algorithms: Selection Sort, Bubble Sort, Insertion<br>Sort, Quick Sort, Merge Sort, Heap Sort; Performance and Comparison among all the methods<br>Hashing: Review of Hashing, Hash Function, Collision Resolution Techniques in Hashing,<br>Separate Chaining, Open Addressing, Linear Probing, Quadratic Probing, Double Hashing,<br>Rehashing, Extendible Hashing. |

**Credit:** 

## **Course Outcome:**

4

Code: MCAN-202

- $\checkmark$  Describe the main components of OS and their working
- ✓ Explain the concepts of process and thread and their scheduling policies
- ✓ Explain the various memory management techniques
- ✓ Compare the different techniques for managing memory, I/O, disk and files
- ✓ Explains the security and protection features of an Operating System

| UNITS | COURSE CONTENT  |
|-------|---|
| 1     | Introduction (8L)<br>Generations Concept of Operating systems, Systems, Types of Operating Systems, OS<br>Services, System Calls, Structure of an OS - Layered, Monolithic, Microkernel Operating<br>Systems, Concept of Virtual Machine. Real Time Operating Systems, Distributed Operating<br>Systems, Multiprocessor Operating System.   |
| 2     | Process and Scheduling(12L)Processes and Threads: 7 state process model, Process scheduling, Operations on processes,<br>Inter-process communication, Threads overview, Benefits of threads, User and kernel threads.CPU Scheduling: Scheduling criteria, Preemptive & non-preemptive scheduling, Scheduling<br>algorithms (FCFS, SJF, RR, Priority, Multi-level queue, Multi-level feedback queue),<br>Comparative study of the algorithms, Multi-processor scheduling.Process Synchronization: Background, Critical section problem, Software solution – Peterson<br>and Bakery algorithm, Synchronization hardware, Semaphores, Classical problems of<br>synchronization.Deadlocks: System model, Deadlock characterization, Methods for handling Deadlocks,<br>Deadlock prevention, Deadlock avoidance, Deadlock detection, Recovery from deadlock.Case Study: Scheduling on Unix and Windows Operating Systems |
| 3     | Memory Management(10L)Basic concept, Logical and Physical address map, Memory allocation: Contiguous Memory<br>allocation- Fixed and variable partition- Internal and External fragmentation and Compaction;<br>Paging: Principle of operation -Page allocation Hardware support for paging, Protection and<br>sharing, Disadvantages of paging.Virtual Memory: Basics of Virtual Memory - Hardware and control structures - Locality of<br>reference, Page fault, Working Set , Dirty page/Dirty bit - Demand paging, Page Replacement<br>algorithms(Optimal, FIFO, SC, NRU and LRU), Thrashing<br>Case Study: Unix Virtual Memory, Windows Virtual Memory   |
| 4     | File Systems and I/O Management(7L)File concept, Fundamental File System Organization and Access Methods, Directory structure,<br>File system structure, Allocation methods (Contiguous, Linked, Indexed), Free-space<br>management (Bit vector, Linked list, Grouping), Directory Implementation (Linear list, Hash<br>table), Efficiency and Performance.PC Bus Structure, I/O connections, Data transfer techniques (Programmed, Interrupt driven,<br>DMA), Bus arbitration (Daisy chain, Polling, Independent request), Blocking and non-<br>blocking I/O, Kernel I/O subsystem (Scheduling, Buffering, Caching, Spooling and device<br>reservation, Error handling).Case Study: Unix File System, Windows File System  |
| 5     | Security and Protection: (3L)<br>Overview of Security and Protection, Goals of Security and Protection, Security Attacks,<br>Formal and Practical aspects of Security, Encryption, Authentication and Password Security,<br>Access Descriptors and the Access Control Matrix, Protection Structures, Capabilities,<br>Case Study: Unix Security, Windows Security.  |

#### Master of Computer Application Code: MCAN-203 **Paper: Object Oriented Programming with Java Contacts Hours / Week: 4 Total Contact Hours: 40** Credit: 4 **Course Outcome:** After successful completion of this course, students will be able to: $\checkmark$ Use the characteristics of Java language in a program. Use variables and data types in program development. ✓ Identify and implement arrays, String and Selection Statements. ✓ Write Java programs using object-oriented programming techniques including classes, objects, methods, instance variables, interface. $\checkmark$ Design and implementation programs of Exception handling, Packages, Multithreading Programming, Window based programs. UNITS **COURSE CONTENT Object-Oriented Languages** (10L)Java's History, Creation of Java, Internet & Java, Byte-code, Its Features, Java Program 1 Structure and Java's Class Library, Data Types, Variables, and Operators, Operator Precedence; Selection Statements, Scope of Variable, Iterative Statement; Defining Classes & Methods, Creating Objects of a Class, Defining and Using a Class, Automatic Garbage Collection. Arrays and Strings: Arrays, Arrays of Characters, String Handling Using String Class, Operations on String Handling Using, String Buffer Class. **Classes and Inheritance** (10L)Using Existing Classes, Class Inheritance, Choosing Base Class, Multiple Levels of 2 Inheritance, Abstraction through Abstract Classes, Using Final Modifier, Packages: Understanding Packages, Defining a Package, Packaging up Your Classes, Adding Classes from a Package to Your Program, Understanding CLASSPATH, Standard Packages, Access Protection in Packages, Concept of Interface. **Exception Handling:** The concept of Exceptions, Types of Exceptions, Dealing with Exceptions, Exception Objects, Defining Your Own Exceptions. Multithreading Programming (10L)The Java Thread Model, Understanding Threads, The Main Thread, creating a Thread, 3 Creating Multiple Threads, Thread Priorities, Synchronization. Input / Output in Java: I/O Basic, Byte and Character Structures, I/O Classes, Reading Console Input, Writing Console Output, Reading and Writing on Files, Random Access Files, Storing and Retrieving Objects from File, Stream Benefits. Creating Applets in Java: Applet Basics, Applet Architecture, Applet Life Cycle, Simple Applet Display Methods, The HTML Applet Tag Passing Parameters to Applets. Working with Windows (10L

AWT Classes, Window Fundamentals, Working with Frame, Creating a Frame Window in an Applet; Displaying Information within a Window.
 Working with Graphics and Texts: Working with Graphics, Working with Color, Setting the Paint Mode, Working with Fonts, Managing Text Output; Using Font Metrics, Exploring Text

and Graphics, Working with AWT Controls, Layout Managers and Menus.

# Code: MCAN-204 Contacts Hours / Week: 4

# Paper: Computer : Networking and TCP Suite Total Contact Hours: 40 Ci

Credit: 4

# **Course Outcome:**

- ✓ Understand the purpose of network layered models, network communication using the layered concept and able to compare and contrast OSI and TCP/IP model.
- ✓ Differentiate among and discuss the four level of address (physical, logical, port and url) used by the internet TCP/IP protocols.
- ✓ Understand the routing principals and algorithm such as distance vector routing and link state.
- $\checkmark$  Judge the efficiency of the connection oriented and connectionless protocol.
- $\checkmark$  Familiar with the routing techniques, protocols and quality of service.
- ✓ Explain the concept of network security and cryptography.

| UNITS     | COURSE CONTENT  |
|-----------|---|
|           | Introduction (4L)   |
| 1         | Direction of data flow (simplex, half duplex, full duplex), Network topology, categories of   |
|           | network (LAN, MAN, WAN).  |
| 2         | Protocol and Standard (4L)  |
| Δ         | Layered Task, The OSI model, TCP/IP protocol suite, Addressing  |

## **Course Outcome:**

After successful completion of this course, students will be able to:

- ✓ To understand approximation and propagation error.
- $\checkmark$  To understand and implement different interpolation techniques.
- $\checkmark$  To understand and implement integration techniques.

 $\checkmark$  To understand and implement solutions for linear and algebraic and differential equations.

| UNITS             | COURSE CONTENT   |
|-------------------|--|
| 1                 | Approximation in numerical computation(3L)Truncation and rounding errors, Fixed and floating point arithmetic, Propagation of errors.  |
| 2                 | Interpolation (5L)<br>Newton forward/backward interpolation, Lagrange's and Newton's divided difference<br>Interpolation   |
| 3                 | Numerical integration       (4L)         Trapezoidal rule, Simpson's1/3 rule, Romberg's Integration, Expression for corresponding error terms.   |
| 4                 | Numerical solution of Linear equations(6L)Gauss elimination method, Matrix inversion, LU Factorization method, Gauss-Seidel iterative<br>method.   |
| 5                 | Numerical solution of Algebraic equation(5L)Bisection method, Regula-Falsi method, Newton-Raphson method, Iteration Method, SecantMethod.  |
| 6                 | Numerical solution of ordinary differential equation(5L)Euler's method, Runge-Kutta methods, Taylor's series, method, Predictor Corrector methodsand Finite Difference method.   |
| 7                 | Least Square Curve fitting(3L)Linear & non-linear curve fitting  |
| 8                 | Introduction to Statistics& Probability(9L)Basic Statistics-measure of central tendency, dispersion.Probability, distribution introduction to mass function, density function, distribution function(Binomial, Poisson, Normal).   |

Credit: 3

# **Course Outcome:**

After successful completion of this course, students will be able to:

- $\checkmark$  To understand linear and non-linear data structures.
- $\checkmark$  To understand different types of sorting and searching techniques.
- $\checkmark$  To know how to create an application specific data structure.
- $\checkmark$  To solve the faults / errors that may appear due to wrong choice of data structure.

✓ To analyze reliability of different data structures in solving different problems.

| UNITS | COURSE CONTENT   |
|-------|--|
| 1     | Implementation of data structure operations (Insertion, deletion, traversing, searching) on array.   |
|       | Linear search, Binary search.  |
| 2     | Implementation of stack, queue operation using array. Pop, Push, Insertion, deletion,                |
|       | Implementation of circular queue. Infix to postfix conversion, postfix expression evaluation         |
| 3     | Implementation of linked lists: Single linked list, circular linked list, double linked list, doubly |
|       | circular linked list. Implementation of stack and queue using linked list. Merging two linked list,  |
|       | Linked list representation of a polynomial, polynomial addition, polynomial multiplication.          |
| 4     | Tree: creating Binary Search tree, recursive and non-recursive traversal of BST, deletion in BST,    |
|       | calculating height of a BST, building AVL tree.  |
| 5     | Implementation of sorting techniques: selection, bubble, quick sort, insertion sort, merge sort,     |
|       | heap sot, implementation of priority queue. Hash table implementation.                               |
| 6     | Implementation of Graph: representation, searching, BFS, DFS   |

| Code: N  | MCAN-292 Paper: Operating System Lab (Unix)   |
|----------|---|
| Contact  | ts Hours / Week: 4 Total Contact Hours: 40 Credit: 3  |
| Course C | Outcome:  |
|          | cessful completion of this course, students will be able to:                                  |
|          | o the use of basic UNIX Commands from the command line, and create Shell Scripts to customize |
|          | neir UNIX Working Environment.  |
|          | ganize and manage their processes within UNIX through system calls.                           |
|          | ganize and manage their files within the UNIX through system calls.                           |
|          | ovide a mechanism for handling asynchronous events through signals (Software Interrupt).      |
|          | plement the Inter-process communication using FIFOs, Message Queues, Semaphores, and          |
|          | hared Memory.   |
|          | plain Socket programming to design Client-Server Environment.                                 |
|          | nderstand and implement Multithreaded Programming Environment.                                |
| UNITS    | COURSE CONTENT  |
|          | Shell programming   |
| 1        | Creating a script, making a script executable, shell syntax (variables, Conditions, control   |
|          | structures, functions and commands).  |
| _        | Process   |
| 2        | Starting new process, replacing a process image, duplicating a process image, waiting for     |
|          | process, Zombie Process, Orphan Process   |
| 3        | File Handling   |
| U U      | Programming on files (use create(), open(), read(), write(), close(), lseek(), dup()).        |
| 4        | Signal  |
|          | Signal Handling, Blocking, Suspending, Delivering Signals, Various Signal Related Functions.  |
|          | Inter-process communication   |
| 5        | Pipes (use functions pipe(), popen(), pclose()),  |
|          | Named Pipes (FIFOs, accessing FIFO),  |
|          | Message Queues (use functions msgget(), msgsnd(), msgrcv(), msgctl()),                        |
|          | Semaphores (use functions semctl(), semget(), semop())  |
|          | Shared Memory (use functions shmget(), shmat(), shmdt(), shmctl())                            |
| 6        | Sockets:<br>TCP Sockets LUDP Sockets Socket Options Cliffort /Somer Example Name and Addres   |
|          | TCP Sockets, UDP Sockets, Socket Options, Cliient /Server Example, Name and Addres            |
|          | Conversions POSLY Three de  |
| 7        | POSIX Threads   |
|          | Programming with pthread functions (viz. pthread_create(), pthread_join(), pthread_exit()     |
|          | <pre>pthread_attr_init(), pthread_cancel())</pre>   |

# Code: MCAN-293Paper: Object Oriented Programming Lab using JAVAContacts Hours / Week: 4Total Contact Hours: 40Credit: 3

# **Course Outcome:**

- ✓ Apply object-oriented principles or features in software design process to develop Java programs for real life applications.
- ✓ Reduce the complexity of procedural language by employing different OOP technologies for developing robust and reusable software.
- ✓ Develop programs using stream classes for various I/O operations and design concurrent.
- ✓ Design graphical user interface to develop user interactive applications.

| UNITS | COURSE CONTENT  |
|-------|---|
| 1     | Assignments on class, constructor, overloading, inheritance, overriding.          |
| 2     | Assignments on wrapper class, arrays.   |
| 3     | Assignments on developing interfaces- multiple inheritance, extending interfaces. |
| 4     | Assignments on creating and accessing packages.                                   |
| 5     | Assignments on multithreaded programming  |
| 6     | Assignments on applet programming   |

# Code: MCAN-301Paper: Software Engineering using UMLContacts Hours / Week: 4Total Contact Hours: 40Credit: 4

### **Course Outcome:**

- After successful completion of this course, students will be able to:
  - ✓ Analyze the problem scenario and identify classes/ objects and their properties, relationship in class model.
  - ✓ Demonstrate the conceptual modeling techniques of UML for solving Real-World problem.
  - ✓ To learn software development life cycle for Object-Oriented solutions for Real-World Problems.
  - ✓ Ability to apply the concepts of object oriented methodologies to analyze requirements and design to the point where it is ready for implementation.
  - $\checkmark$  Demonstrate the concept of Testing to measure quality of software.

| UNITS   | COURSE CONTENT   |  |
|---|--|--|
| 1   | Introduction to Software Engineering: (2L)   |  |
|   | What is Software Engineering? Software Engineering Concepts, Software Engineering          |  |
|   | Development Activities, Managing Software Development.                                     |  |
|   | Object Oriented Concept and Modelling:(5L)   |  |
|   | Object-Oriented Principals and Concepts: Classes and Object, Modularity, Abstraction and   |  |
|   | Encapsulation; Object Relationship like Association, Aggregation and Composition;          |  |
| 2   | Inheritance, Polymorphism and Dynamic Binding Interfaces                                   |  |
|   | Model: Importance of Modeling, Object Oriented Modeling                                    |  |
|   | Identifying the Elements of an Object Model: Identifying classes and objects, Specifying   |  |
|   | the attributes Defining operations, Finalizing the object definition.                      |  |
| 3   | Introduction to UML: (3L)  |  |
| 3   | Overview of UML, Conceptual Model of UML, Architecture, S/W Development Life Cycle.        |  |
|   | Basic and Advanced Structural Modeling:(7L)  |  |
| 4   | Classes Relationship, Common mechanism, Diagrams, Class Diagram, Advanced classes,         |  |
|   | Advanced Relationship, Interface, Types and Roles, Packages, Object Diagram.               |  |
|   | Basic and Advanced Behavioral Modeling:(7L)  |  |
| 5   | Interactions, Use cases, Use Case Diagram, Sequence Diagram, Collaboration Diagram,        |  |
|   | Interaction Diagram, Activity Diagram, State Chart Diagram.                                |  |
| 6   | Architectural Modeling: (3L)   |  |
| 0   | Artifacts, Artifact Diagram, Implementation Diagram, Deployment Diagram.                   |  |
|   | Object-Oriented Design: (5L)   |  |
|   | Generic components of Object-Oriented Design model, System Design process, Partitioning    |  |
| 7   | the Analysis Model, Concurrency and subsystem Allocation, Task Management component,       |  |
|   | Data Management Component, Resource Management Component, Inter Sub-system                 |  |
|   | Communication.   |  |
|   | Object Oriented Analysis:       (4L)   |  |
| 8   | Iterative Development, Unified process & its Phases: Inception, Elaboration, Construction, |  |
|   | Transition, Understanding requirements.  |  |
|   | Object Oriented Testing: (4L)  |  |
| 9   | Overview of Testing and object oriented Testing, Types of Testing, Object oriented Testing |  |
|   | strategies, Test case design for Object-Oriented software, Inter class test case design.   |  |

# Code: MCAN-302Paper: Artificial Intelligence and Expert SystemContacts Hours / Week: 4Total Contact Hours: 40Credit: 4

# **Course Outcome:**

- ✓ After successful completion of this course, students will be able to understand the underlying assumption of philosophy of the logical sequences of real life problem by applying State Space Search behind the limitation of non-solving method of conventional computational approach.
- ✓ Incorporating heuristic search technique on Game Playing.
- ✓ Various strategies of representing knowledge with decision making algorithms. Creation of substantial domain knowledge base with meta data. Application of knowledge representation issues using Prolog/LISP.
- ✓ To recognize the adoption of new system through learning by an Intelligent System and processing of Natural Language.
- ✓ Ability to apply machine learning techniques to solve real world problems and how Expert Systems can be carried out by the help of learning, analyzing by applying various search techniques and resolute to provide solutions.

| UNITS | COURSE CONTENT   |  |
|-------|--|--|
| 1     | Introduction to Intelligent Systems:         (81           Overview of Artificial intelligence- Problems of AI, AI technique, Tic – Tac – Toeproblem.  |  |
| 2     | Search Techniques:       (10L)         Problems, Problem Space & search.       (10L)         Heuristic Search Techniques,       (10L)         Game planning – Minimax search procedure, adding alpha beta cut-off's, Iterative Deepening.  |  |
| 3     | Knowledge Representation Issues:         Representing knowledge using rules.         Weak slot & filler structures.         Strong slot & filler structures.         Implementation of Knowledge with Prolog Programs.         Basic knowledge of programming language like Prolog & Lisp. |  |
| 4     | Adoption of New Knowledge:       (10L         Deep Learning: Introduction to Neural Networks, Convolution of New Knowledge       Natural language processing, Understanding.         Learning – induction & explanation based learning.       Earning.                                     |  |
| 5     | Expert systems: (51<br>Expert system shells, knowledge acquisition.  |  |

#### **Paper: Formal Language and Automata Theory** Code: MCAN-303 **Contacts Hours / Week: 4 Total Contact Hours: 40** Credit: 4

# **Course Outcome:**

- After successful completion of this course, students will be able to:
  - $\checkmark$  Understand the formal notation for strings, languages and machines.
  - ✓ Design and Implement Finite automata to accept a string of a language.
  - $\checkmark$  For a given language determine whether the given language is regular or not.
  - ✓ Design context free grammars to generate strings of context free language.
  - ✓ Determine equivalence of languages accepted by Push Down Automata and languages generated by context free grammars
  - ✓ Understand and analyze the hierarchy of formal languages, grammars and machines.

| ✓ L     | Distinguish between computability and non-computability and Decidability and un-decidability.                  |
|---------|--|
| UNITS   | COURSE CONTENT   |
|         | Introduction (3L)  |
| 1       | Introduction: Alphabet, languages and grammars, productions and derivation, Chomsky                            |
|         | hierarchy of languages.  |
|         | Regular languages and finite automata: (12L)   |
|         | Regular expressions and languages, deterministic finite automata (DFA) and equivalence                         |
|         | with regular expressions, nondeterministic finite automata (NFA) and equivalence with                          |
| 2       | DFA, regular   |
|         | grammars and equivalence with finite automata, properties of regular languages, pumping                        |
|         | lemma  |
|         | for regular languages, minimization of finite automata)  |

Credit: 3

### **Course Outcome:**

After successful completion of this course, students will be able to:

 $\checkmark$  Understand the basic working methodology of .NET architecture.

- ✓ After completion of the course the student will be able to use the features of Dot Net Framework along with the features of C#
- ✓ Apply In-Built and Create User defined functions.
- ✓ Debug the Programs by applying concepts and error handling techniques.

✓ Create dynamic Website/ Web based Applications, using ASP.NET, SQL SERVER database

| UNITS     | COURSE CONTENT  |
|-----------|---|
|           | Basics of C# and ASP .Net (8L)  |
| 1         | C# basics (oops concepts, syntaxes, loops, typecasting etc.), C# Basics -II (Sealed class,      |
|           | Abstract class, Partial class, Sealed Method Generics, Delegates, file/stream, collection), Net |
|           | Framework, Creating an ASP.NET Web Application Project, ASP .Net Architecture,                  |
|           | Processing of an application in .Net, Namespace Fundamentals, Maintaining State                 |
|           | Information.  |
|           | Creating a User Interface (Controls and Master Page) (4L)                                       |
| 2         | Using Controls, Validation Controls, Navigation between Pages, Master Pages & Themes,           |
| 2         | Simple Master Page Nested Master Page Configuring Master Page Creating Themes,                  |
|           | Applying Themes, Applying Style sheet.  |
|           | Storing and Retrieving Data with ADO.NET (6L)   |
| 3         | Accessing Data with ADO.NET, Using Data Sets on Web Forms, Processing Transactions.             |
|           | Catching and Correcting Errors (4L)   |
| 4         | Using Exception Handling, Using Error Pages, Logging Exceptions.                                |
| _         | Web Services (3L)   |
| 5         | Creating Web Services, Discovering Web Services, Instantiating and Invoking Web Services.       |
| (         | Building and Deploying Web Applications (6L)  |
| 6         | Building a Web Application, Deploying a Web Application, Creating an Installation Program.      |
|           | Maintaining Security (3L)   |
| 7         | Authenticating and Authorizing Users, Using Windows Authentication, Using Forms                 |
|           | Authentication.   |
| 8         | Use of Ajax on the web forms (3L)   |
| 0         | Introduction to Ajax Controls, Using Ajax controls on web forms.                                |
|           | Introduction to MVC (3L)  |
| 9         | Introduction to MVC Architecture, MVC- Model, Views, Controllers, Creating Simple MVC           |
|           | Application.  |
| Reference |   |
|           | SP.net – The Complete Reference- Tata McGraw Hill   |
|           | Mastering ASP.Net - BPB Publication         ASP.NET Programming – Murach                        |
| • A       | ISI INET I Togramming – Murach  |
|           |   |
|           |   |
|           |   |
|           |   |
|           |   |
|           |   |
|           |   |
|           |   |
|           |   |

#### **Code: MCAN-E304B** Paper: Web Enabled JAVA Programming **Total Contact Hours: 40 Contacts Hours / Week: 4**

**Course Outcome:** 

After successful completion of this course, students will be able to:

✓ Understand the basic working methodology of JSP, servlet and JSF Frameworks

✓ Create dynamic web application using JSP and servlet and database.

 $\checkmark$  Design and develop a Web site using AJAX.

 $\checkmark$  Debug the Programs by applying concepts and error handling techniques.

| UNITS     | COURSE CONTENT  |
|-----------|---|
| 1         | <b>Core Java Overview:</b> (6L)<br>Object oriented concepts, Exception Handling, Multi Threading Introduction to JDBC:<br>Overview of JDBC API, The Java.sql package, JDBC Drivers, Executing SQL commands<br>using JDBC Drivers, static and dynamic Execution of SQL statements, Execution of Stored<br>Procedures using JDBC. Introduction to Transactions and Transaction Methods. Introduction<br>to JNDI, Introduction to Data Source and Connection pooling, Introduction to Web<br>Applications, Web Servers Overview of J2EE Technologies. (6L)   |
| 2         | Introduction to Java Servlets: (8L)<br>Static and Dynamic contents, Servlet life Cycle and Life cycle methods, Servlet Request and<br>Response Model, Deploying a Servlet, Servlet State Transitions, Servlet Config and Servlet<br>Context, Servlet Redirection and Request Dispatch, Servlet Synchronization and Thread<br>Model. Maintaining Client State: Cookies, URL rewriting, Hidden form fields, Session<br>Tracking. (8L)   |
| 3         | Introduction to JSP : (8L)<br>JSP & Servlet as Web Components, Servlets vs. JSP, JSP Lifecycle, JSP Page Lifecycle<br>Phases, General Rules of Syntax, JSP syntactic elements, JSP element syntax, Template<br>content. JSP elements-directives, declarations, expressions, scriptlets, actions. JSP Standard<br>Actions: jsp:useBean, jsp:getPreoperty, jsp:setProperty, jsp:include, jsp:forward, jsp:plugin,<br>jsp:param,java Server Pages Standard Tag Library(JSTL).  |
| 4         | Introduction to JSF Frameworks: (10L)<br>Getting started: A Simple Example, Sample Application Analysis, Development<br>Environments for JSF. Managed Beans: A Sample Application, Bean Scopes Configuring<br>Beans, Navigation, Static Navigation, Dynamic Navigation, Standard JSF tags, Data tables,<br>conversion and validation Overview of the Conversion and Validation Process, Using<br>Standard Converters. Event Handling: Life Cycle Events, Value Change Events, Action<br>Events, Event Listener Tags, Immediate Components, Passing Data from the UI to the Server,<br>Custom Components, Converters and Validators: Classes for Implementing Custom<br>components, Tags and Components, The Custom Component Developer's Toolbox,<br>Encoding: Generating Markup, Decoding: Processing Request Values, Using Converters,<br>Implementing Custom Component Tags, The TLD File, The Tag Handler Class, Defining Tag<br>Handlers in JSF 1.1. |
| 5         | AJAX: (8L)<br>Ajax Fundamentals, JavaScript Libraries, The Prototype Library, The Fade Anything<br>Technique Library, Form Completion. Realtime Validation, Propagating Client-Side View<br>State Direct Web Remoting, Ajax Components, Hybrid Components, Keeping JavaScript Out<br>of Renderers, Transmitting JSP Tag Attributes to JavaScript Code,Ajax4jsf,Implementing<br>Form Completion with Ajax4jsf,Implementing Realtime Validation with<br>Ajax4jsf.Introduction to Java Web Services.   |

|-------------|--|
| Course Oi   |  |
| ✓ Afte      | r successful completion of this course, students will be able to understand the underlying |
|             | mption of defining variables, constants, operators, expressions, HTML Form creation and    |
|             | nissions. POST & GET Method.   |
| 🗸 Inco      | rporating HTML form with PHP   |
| ✓ Impl      | ementation of Decision, Loops, Functions, Array and Exception Handling concepts using PHI  |
| serv        | er concept.  |
| ✓ Strat     | tegy to connect with MYSQL Server.   |
| 🗸 Abil      | ity to check validation using JavaScript & JQuery.   |
| ✓ Con       | necting Forms using AJAX Concept.  |
| UNITS       | COURSE CONTENT   |
|             | Introduction to Web Technology & implementation of PHP Programs:                           |
| 1           | Evaluation of PHP. Basic Syntax. Defining variables and constants. PHP Data type           |
| 1           | Operator and Expression. Basics of HTML: Form Creation, Handling of Forms, Submission      |
|             | of Forms. POST& GET method.  |
|             | Handling Html Form With PHP: (   |
| 2           | Capturing Form. Data Dealing with Multi-value files. Generating File uploaded form.        |
|             | Redirecting a form after submission.   |
|             | Decisions, Functions, String, Array & Exception Handling: (1                               |
|             | Making Decisions. Doing Repetitive task with looping. Mixing Decisions and looping with    |
|             | Html   |
|             | What is a function? Cookies, Session and in-built functions.                               |
| 2           | Creating and accessing String. Searching & Replacing String. Formatting String. String     |
| 3           | Related Library function.  |
|             | PHP Array. Creating index based and Associative array. Accessing array Element.            |
|             | Looping with Index based array. Looping with associative array using each() and foreach(). |
|             | Some useful Library function.  |
|             | Understanding Exception and error. Try, catch, throw.                                      |
|             | Database Connectivity with MySql:  |
| 4           | Introduction to RDBMS. Connection with MySql Database. Performing basic database           |
| 4           | operation(DML) (Insert, Delete, Update, Select). Setting query parameter. Executing query  |
|             | Join (Cross joins, Inner joins, Outer Joins, Self joins.).                                 |
|             | Java Script & JQuery:  |
| 5           | Introduction to Javascript. Three ways to use Javascript. Working with events Client-side  |
| 5           | Validation. Introduction to JQuery. Validation using JQuery. JQuery Forms. JQuery          |
|             | Examples.  |
| 6           | Connecting Forms using AJAX Concept: (   |
| 0           | Introduction to AJAX. PHP with AJAX. Working with database.                                |

## Code:MCAN-E304DPaper: Android Application DevelopmentContacts Hours / Week: 4Total Contact Hours: 40

Credit: 3

### **Course Outcome:**

After successful completion of this course, students will be able to:

- ✓ Understand mobile application development trends and Android platform
- ✓ Analyze the need of simple applications, game development, Location map based services
- ✓ Be familiar with SMS, email, service, binding and deploying APks
- ✓ To develop, deploy and maintain the Android Applications.

| UNITS     | S COURSE CONTENT  |
|-----------|---|
|           | Android Fundamentals (8L  |
| 1         | Mobile Application development and trends – Android overview and Versions – Android open stack, features – Setting up Android environment (Eclipse, SDK, AVD)- Simple Android application development – Anatomy of Android applications – Activity and Life cycle – Intents, services and Content Providers   |
|           | Android User Interface (8L  |
| 2         | Layouts: Linear, Absolute, Table, Relative, Frame, Scroll view, Resize and reposition -<br>Screen orientation – Views: Text view, Edit Text, Button, Image Button, Checkbox, Toggle<br>Button, Radio Button, Radio Group, Progress Bar, Auto complete Text, Picker, List views<br>and Web view– Displaying pictures with views: Gallery and Image View, Image Switcher,<br>Grid view – Displaying Menus: Helper methods, Option and Context |
|           | Data Persistence (8L  |
| 3         | Shared User preferences – File Handling: File system, System partition, SD card partition, user partition, security, Internal and External Storage – Managing data using SQLite –User defined content providers   |
|           | Messaging, Networking And Services (8L  |
| 4         | SMS Messaging: Sending and Receiving – Sending email and networking – Downloading binary and text data files – Access Web services – Developing android services: create your own services, performing long running task in a service-performing repeated task in a service   |
|           | Location Access And Publish Android Application (8L   |
| 5         | Location based services: Display map, zoom control, view and change, Marking,   |
|           | Geocoding, Get location - Publish Android applications and Deployment   |

| Contacts Hours / Week: 4Total Contact Hours: 40Credit: 3   |   |  |  |  |
| Course Outcome:  |   |  |  |  |
|  | After successful completion of this course, students will be able to:   |  |  |  |
| $\checkmark$ Understand and analyze the running times of algorithms based on asymptotic analysis and justify           |   |  |  |  |
|  | e correctness of algorithms.  |  |  |  |
| $\checkmark$ Describe the divide-and-conquer paradigm and explain when an algorithmic design situation calls           |   |  |  |  |
|  | rit.  |  |  |  |
|  | derstand and implement the greedy paradigm for a given problem.   |  |  |  |
|  | sign the dynamic-programming paradigm and implement it.<br>derstand and implement the Back Tracking and Branch-&-Bound problem. |  |  |  |
|  | a given model engineering problem model it using graph and write the corresponding algorithm                                    |  |  |  |
|  | solve the problems.   |  |  |  |
|  | plain the ways to analyze randomized algorithms (expected running time, probability of error).                                  |  |  |  |
| UNITS  | COURSE CONTENT  |  |  |  |
|  | Introduction: (8L)  |  |  |  |
|  | Characteristics of algorithm. Analysis of algorithm: Asymptotic analysis of complexity  |  |  |  |
| 1  | bounds – best, average and worst-case behavior; Performance measurements of Algorithm,  |  |  |  |
|  | Time and space trade-offs, Analysis of recursive algorithms through recurrence relations:                                       |  |  |  |
|  | Substitution method, Recursion tree method and Masters' theorem.  |  |  |  |
|  | Divide-&-Conquer and Greedy Method: (8L)  |  |  |  |
|  |   |  |  |  |
| 2  | Divide & Conquer: General Method - Finding maximum and minimum – Merge sort, Quick  |  |  |  |
| 2  | sort, Selection, Strassen's matrix multiplication.  |  |  |  |
|  | Greedy Method: General Method knapsack problem - Tree vertex splitting - Job sequencing   |  |  |  |
|  | with deadlines – optimal storage on tapes.  |  |  |  |
|  | Dynamic Programming:(8L)  |  |  |  |
| 3  | General Method - multistage graphs – all pairs shortest paths – single source shortest paths -                                  |  |  |  |
|  | String Editing – 0/1 knapsack. Search techniques for graphs –DFS-BFS-connected  |  |  |  |
|  | components – biconnected components.  |  |  |  |
| 4  | Back Tracking and Branch-&-Bound: (8L)  |  |  |  |
| 4  | <b>Back Tracking</b> : General Method – 8-queens - Sum of subsets - Graph Coloring –Hamiltonian                                 |  |  |  |
|  | cycles. Branch and Bound: General Method - Traveling Salesperson problem.Lower Bound Theory:(8L)                                |  |  |  |
| 5  | Comparison trees - Oracles and advisory arguments – Lower bounds through reduction -  |  |  |  |
| 5  | Basic Concepts of NP-Hard and NP-Complete problems.   |  |  |  |
| Reference  |   |  |  |  |

### Code: MCAN-E305B Paper: Data Ware Contacts Hours / Week: 4 Total Contac

### Paper: Data Warehousing and Data Mining Total Contact Hours: 40 Cro

### Credit: 3

### **Course Outcome:**

After successful completion of this course, students will be able to:

- ✓ Study of different sequential pattern algorithms
- ✓ Study the technique to extract patterns from time series data and it application in real world.
- $\checkmark$  Can extend the Graph mining algorithms to Web mining
- ✓ Help in identifying the computing framework for Big Data UNITS **COURSE CONTENT Introduction to Data Warehousing:** (8L) The need for data warehousing, Operational and informational Data stores, Data warehouse 1 definition and characteristics, Data warehouse architecture, Data warehouse Database, Sourcing, Acquisition, Cleanup and transformation tools, Metadata, Access tools, Data marts, Data warehousing administration and management. **Online analytical processing (OLAP):** (6L) 2 Need for OLAP, Multidimensional data model, OLAP guidelines, Multidimensional vs. Muilti-relational (OLAP), Categorization of OLAP tools, OLAP tools internet. **Introduction to data mining:** (8L) The motivation, Learning from past mistake, Data mining, Measuring data mining 3 effectiveness, Embedded data mining into business process, What is decision tree, Business score card, Where to use decision tree, The general idea, How the decision tree works. **Classification and prediction:** (6L) 4 Cluster Analysis - Types of Data in Cluster Analysis, Partitioning methods, Hierarchical Methods; Transactional Patterns and other temporal based frequent patterns Time Series Analysis: (5L) 5 Time series Data, Periodicity Analysis for time related sequence data, Trend analysis, Similarity search in Time-series analysis. Web Mining: (7L) Web Mining, Mining the web page layout structure, mining web link structure, mining 6 multimedia data on the web, Automatic classification of web documents and web usage mining; Distributed Data Mining. **Reference Books:** Data warehousing, Data mining and OLAP by Alex Berson& Stephon J. Smith, Tata McGraw Hill.2003. Data Warehousing Fundamentals for IT Professionals, Second Edition by Paulraj Ponniah, Wiley India. # Code: MCAN-E394CPaper: Web Technology through PHP LabContacts Hours / Week: 4Total Contact Hours: 40Credit: 3

### Course Outcome:

- ✓ After successful completion of this course, students will be able to understand the underlying assumption of defining variables, constants, operators, expressions, HTML Form creation and submissions. POST & GET Method & Implementation of Decision, Loops, Functions, Array and Exception Handling concepts.
- ✓ How HTML forms are submitted with PHP Server.
- ✓ Strategy to connect with MYSQL Server.
- ✓ Ability to check validation using JavaScript & JQuery.
- ✓ Connecting Forms using AJAX Concept.

| UNITS | COURSE CONTENT  |  |
|-------|---|--|
|       | Introduction to Web Technology & implementation of PHP Programs & Knowing about     |  |
| 1     | Connection Strings and Functions.   |  |
|       | Implementing basic PHP programs with Form, Loop, Functions Array and Strings.       |  |
|       | Handling Html Form With PHP:  |  |
| 2     | Capturing Form. Data Dealing with Multi-value files. Generating File uploaded form. |  |
|       | Redirecting a form after submission.  |  |
|       | Database Connectivity with MySql:   |  |
| 3     | Programs implementing displaying data from MYSQL to HTML forms using PHP.           |  |
| 5     | Programs implementing updating data from MYSQL to HTML forms using PHP.             |  |
|       | Programs implementing deleting data from MYSQL to HTML forms using PHP.             |  |
| 5     | Java Script & JQuery:   |  |
| 3     | Validating forms using JAVASCRIPT.  |  |
| 6     | Connecting Forms using AJAX Concept:  |  |
| 0     | Fetching data from one form to another form using AZAX.                             |  |

### Code: MCAN-E394D Contacts Hours / Week: 4

### Paper: Android Application Development Lab Total Contact Hours: 40 Credit: 3

### **Course Outcome:**

After successful completion of this course, students will be able to:

- ✓ Learn to use Android Application development platform.
- $\checkmark$  To create simple android application
- $\checkmark$  To understand and implement various designing components of Android user interfaces
- $\checkmark$  To design application's main navigation screen
- ✓ To understand and designing Android Notification (including push notification)
- ✓ To connect android application to database for data insertion and retrieval

| UNITS | COURSE CONTENT  |  |
|-------|---|--|
| 1     | Writing First ApplicationCreating Android Project, Android Virtual Device Creation, Set up debugging environment,Workspace set up for development, Launching emulator, debugging on mobile devices. |  |
| 2     | Basic UI design<br>Basics about Views, Layouts, Resources, Input controls, Input Events, Toasts.  |  |
| 3     | More UI Design<br>Layouts design GridView and ListView, Action bar, Adapters, Menus: Option menu, context<br>menu, sub menu, Pickers - Date and Time, Spinners.                                     |  |
| 4     | Activity and Fragment<br>Activity, Fragment, Activity Lifecycle and Fragment Lifecycle.   |  |
| 5     | Intents<br>Implicit Intents, Explicit intents, communicating data among Activities.   |  |
| 6     | <b>Navigation Drawer</b><br>Panel that displays the app's main navigation screens on the left edge of the screen  |  |
| 7     | Android Notifications<br>Toast, Dialogs (TimePicker, DatePicker, Progress, Alert), Notification Manager and Push<br>Notification  |  |
| 8     | <b>Introducing SQLite</b><br>SQLiteOpenHelper and creating a database - Opening and closing a database, Working with cursors Inserts, updates, and deletes  |  |

## Code: MCAN-381Paper: Minor Project and Viva-voceContacts Hours / Week: 10Total Contact Hours: 80Credit: 8

A student needs to pursue a research/application based project in his/her institution under the direct supervision/mentorship of assigned teacher(s) and on completion of the same an evaluation will be made on the basis of Project Report, Project Presentation and Viva-voce.

### Code: MCAN-OE401

### Paper: Open Elective

### Credit: 4

A minimum 12-week online course from Massive Open Online Courses (MOOCs) in one or any of the domains including, but not limited to, Machine Learning, Big Data Computing, Internet of Things (IoT), Cyber Security, Information Theory and Coding, Natural Language Processor, Cloud Computing. While opting for a domain for pursuing the online course, a student needs to ensure that the domain was not covered in previous semesters of the program. A student needs to submit a self-attested copy of the mark-sheet of this online course to college well before the end of Semester IV. Directly on the basis of the result obtained by a student, final marks will be allocated to him/her.

## Code: MCAN-481Paper: Major Project & Viva-VoceContacts Hours / Week: 26Total Contact Hours: 12-15 WeeksCredit: 22

A student needs to pursue a research/application based project in any of the following modes:

[A] In his/her institution under the supervision/mentorship of assigned teacher(s) belonging to that institution

[B] In his/her institution under the joint supervision/mentorship of assigned teacher(s) belonging to that institution and invited external expert(s)

[C] In a research/software/hardware organization under the joint supervision/mentorship of assigned teacher(s) belonging to that institution and external expert(s) belonging to that research/software/hardware organization

On completion of the same, an evaluation will be made by the institution on the basis of Project Report, Project Presentation, Viva-voce and sufficient measures will be taken by the institution to understand that the project is an outcome based work as a product of student's sole effort.
