**Total Credits for the programme**: 68

*Students going to Industry full time for doing their Project & Thesis work (Dissertation) may opt for completion of these courses through Massive Open Online Courses (MOOCs).*

Date of Revision: July 2018
List of Program Electives

- **Program Elective - I**
  1. Discrete-Event System Simulation (IEM103A)
  2. Management and Productivity (IEM103B)
  3. Computer Integrated Manufacturing (IEM103C)
  4. Management Information System (IEM103D)

- **Program Elective - II**
  1. Engineering Economy and Costing (IEM104A)
  2. Project Engineering and Management (IEM104B)
  3. Facility Layout and Planning (IEM104C)

- **Program Elective - III**
  1. Product Design and Development (IEM203A)
  2. Human Factors Engineering(IEM203B)
  3. Reliability Analysis and Prediction(IEM203C)
  4. Six Sigma Fundamentals and Applications(IEM203D)

- **Program Elective - IV**
  1. Management of Inventory Systems (IEM204A)
  2. Logistics and Supply Chain Management (IEM204B)
  3. Enterprise Resource Planning (IEM204C)
  4. Production Design and Process Planning (IEM204D)

- **Program Elective - V**
  1. Systems Analysis Techniques (IEM301A)
  2. Operations Research-II (IEM301B)
  3. Design of Experiments (IEM301C)
  4. Multi-Criteria Decision Making Techniques (IEM301D)

List of Open Electives

1. Business Analytics (OE301A)
2. Cost Management of Engineering Projects (OE301C)
3. Industrial Safety (OE301D)
4. Composite Materials (OE301E)
5. Waste to Energy (OE301F)

Audit course 1 & 2

1. English for Research Paper Writing (AC101A / AC201A)
2. Pedagogy Studies (AC101B/ AC201B)
3. Constitution of India (AC101C/ AC201C)
4. Disaster Management (AC101D/ AC201D)
5. Value Education (AC101E/ AC201E)
6. Stress Management by Yoga (AC101F /AC201F)
7. Personality Development through Life Enlightenment Skills (AC101G/ AC201G)
8. Sanskrit for Technical Knowledge (AC101H/ AC201H)
Course Objective: To introduce the basic concepts and issues of ergonomics and human factors engineering and its applications, method and time study techniques, for worksystems and product design improvement, and the use of these concepts and techniques to select jobs and industrial situations.

Course Outline:
1. **Ergonomics Fundamentals:** Simple and complex worksystems, ergonomic aspects in workstation design and analysis, history of ergonomics, modern ergonomics.
2. **Anthropometric Principles and Postural Analysis in Workspace Design:** Anthropometry and its uses, principles of applied anthropometry, applications of anthropometry in design, postures and body mechanics, musculoskeletal problems in sitting and standing.
3. **Design of Manual Handling Tasks:** Anatomy and biomechanics of manual handling, design of manual handling tasks; lifting and carrying, NIOSH approach, EC guidelines.
4. **Physiology, Workload, and Work Capacity:** Physical work capacity, factors affecting work capacity, measurement of physiological cost of work, fitness for work.
5. **Design of Physical Environment:** Human thermoregulation, measuring thermal environment, measurement of light, lighting design considerations, measurement of sound, industrial noise control, vibration, principles for the design of visual displays, design of control, work organization and worksystem design.
7. **Method Study:** Process Analysis, Activity Charts, Man-Machine Charts, Operation Analysis, Different Charts and Diagrams Used, Basic Procedure, Micro Motion Study, Fundamental Hand Motions, Principles of Motion Economy, Use of Films in Method Analysis.
9. **Job Evaluation:** Basic Concepts, Different Methods (Objective and Subjective) and their Use, Compensation Schemes, Relationship of Work Study to Incentive Schemes, Wage Incentive Plans.

</tr>
</tbody>
</table>

Course Objective: to introduce the basic concept, issues and techniques of operations research as they are applied in manufacturing and service organization for improve performance and design of optimized systems/sub-systems.

Course Outline:

1. **Linear Programming**: Two variable LP model, graphical method and simplex method, revised simplex method, special cases in simplex method application, comprehensive problems;
2. **Duality and Sensitivity Analysis**: Primal dual relationship and economic interpretation of duality, dual simplex method, sensitivity analysis, comprehensive problems;
3. **Transportation Model and its Variants**: Transportation algorithm, assignment model-Hungarian method, transshipment model, comprehensive problems;
4. **Integer Programming**: Branch and bound algorithm, cutting plane algorithm, comprehensive problems;
5. **Introduction to Goal Programming**: comprehensive problems;
6. **Dynamic Programming**: Forward and backward recursion-stagecoach problem, knapsack model, comprehensive problems;
7. **Classical Optimization Theory**: Unconstrained and constrained problem, comprehensive problems.

Learning Resources:

2. Taha H A, Operation Research- An Introduction, Prentice-hall
4. Vohra, N D, Quantitative Techniques in Management, Tata McGraw Hill

Date of Revision: July 2018

</tr>
</tbody>
</table>

**Pre-Requisites:**

**Course Objective:** To introduce the concept of simulation, the basic stages of simulation, simulation languages, statistical aspects of simulation, and the use of simulation in manufacturing and service systems.

**Course Outline:**
1. Introduction to Simulation, General Principles, Simulation Examples, Simulation Software;
2. Statistical Models in Simulation;
3. Random Number and Random Variate Generation;
4. Input Modeling;
5. Verification and Validation of Simulation Models;
6. Output Analysis for a Single Model;

**Learning Resources:**

</tr>
</tbody>
</table>

**Pre-Requisites:**

**Course Objective:** To introduces the fundamentals of management concept with its principles and practice as well as tools and techniques related to productivity engineering and management as their application in manufacturing and service organization.

**Course Outline:**
1. Evolution of management principles and concepts;
2. **Function of management:** Planning-strategic, tactical and operation planning, short-medium-long-term planning; organizing-different organization structure, peters principles ;staffing-delegation of...
authority and power roles and responsibilities; leading-kinds of leaderships, motivation theories, Parkinson’s law; control-fit forward and fit back control;

3. **Basics of productivity and performance management**: productivity cycle, performance management, classification of productivity and performance measurement tools and techniques-NPMMP including evaluation norms and systems in manufacturing and service organization, productivity planning application, productivity performance-measurement techniques ,NC, surrogate measurement technique;

4. **Productivity performance improvement**: classification of the tools and techniques, important aspects, integrated framework, examples and case studies.

Pre-Requisites:

Course Outline:

- Fundamentals of Numerical Control (NC) and Computer Numerical Control (CNC);
- Direct Numerical Control (DNC) NC Part Programming.
- Industrial Robot Application;
- Robot Programming Fundamentals;
- Automated Guided Vehicle System;
- Automated Storage Systems;
- Flexible Manufacturing Systems (FMS); FMS Components;
- Transfer Lines and Automated Manufacturing Systems Automated Assembly.
- Product Design and CAD;
- Computer Aided Manufacturing (CAM);
- Computer Aided Process Planning (CAPP)

Learning Resources:

Date of Revision: July 2018
Subject Code : IEM103D  
Category : Program Elective – I  
Subject Name : Management Information System  
Semester : First  
L-T-P : 3-0-0  
Credit:3  
Pre-Requisites:

Course Objective: The objective of this course is to introduce the students the basic concepts and issues of management information system as they are designed and applied for developing, monitoring and control of data information and its value for ensuring timely and appropriate manufacturing and business purposes.

Course Curriculum:
Information Systems Laboratory The IS Revolution; Strategic Role of Information Systems, Organizations, and Business Processes; Information, Management, and Decision Making Computers and Information Processing; Information Systems Software; Telecommunications, Networks and Wireless Technology; The Internet; Electronic Business and Ecommerce and digital markets, digital goods Developing Information systems; function-oriented design; object-oriented design; database management systems, Enterprise Resource Planning: Basic issues; Approach; Implementation, and the modules of ERP Project management: establishing the business value of systems and managing change Managing Knowledge: Knowledge Work and Artificial Intelligence; Enhancing Management Decision Making. Redesigning the Organization with IS Information Systems Security and Control; Ethical and Social Impact of Information Systems.

Learning Resources:

Program Elective – II

Subject Code: IEM104A  
Subject Name: Engineering Economy and Costing  
L-T-P: 3-0-0  
Credit: 3

Course Objective: The objective of the course is to introduce the basic concepts and issues involved and tools and techniques to be used in each of the topics to be covered for improved financial performance and cost reduction.

Course Outline:
- Introduction
- Time value of money: Series of cash flows, uniform series of cash flows, uniform gradient series formula.
- Worth of investments: Present worth method (PW), annual worth method (AW), future worth method (FW), internal rate of return method.
- Depreciation: Sum of the years’ digits depreciation, MACRS depreciation method.
- Profitability of investments
- Inflation
- Break-Even and sensitivity analysis
- Uncertainty and risk analysis
- Benefit-cost analysis

**Course Objective:** To introduce of basic connects of facility layout and planning, employed in an industrial environment. Comprehension of relevant tools, techniques and methodologies as required for taking best-possible facility location decision, layout planning with material handling systems, storage and warehouses, facilities of a manufacturing or service organizations is the main purpose of introduction such a course for the students.

**Course Outline:**
1. **Introduction:** Nature, Significance and Scope of Facility layout and design;
2. **Facility Location:** Location analysis, Single-facility and Multi-facility location problems, Location allocation problems;
3. **Facility Layout:** Significance, Objectives, Steps in layout planning, Quantitative techniques;
4. **Material Handling:** Definition, Principles of Material Handling, Material Handling System Design, Equipment Selection;
5. **Storage and Warehousing:** Functions, Objectives and Principles, Facility Service, Design of Assembly and Production Lines;

**Learning Resources:**

**Pre-Requisites:**

**Course Objective:** To introduce the fundamentals of forecasting techniques, capacity planning, aggregate production planning and scheduling techniques in flow and job shops of manufacturing systems including material requirements planning and its variants. The knowledge in the topics as mentioned in the course outline is essential to achieve this objective. The course is intended to be designed for creating a knowledge-base of the state-of-the-art manufacturing systems.

**Course Outline:**

1. **Forecasting:** Long and short term demand forecasting methods, smoothing methods, regression methods, Estimation of trend, cycle, and seasonality components, analysis of forecast error and computer control of forecasting systems;

2. **Production-Distribution System Design:** Plant location and capacity planning;

3. **Aggregate planning and Master Production Scheduling:** Aggregation techniques, aggregate capacity, disaggregation of aggregate plan, master production scheduling, Analytical and computer integrated solution techniques;

4. **Operations Scheduling and Control:** Basic sequencing and scheduling techniques, priority rules, progress chasing and updating of production schedules;

5. **Design of Production Planning and Control Systems:** System design for continuous and intermittent production systems, integration of master production, material requirements and shop scheduling systems.

**Learning Resources:**

2. Narasimhan, S L, McLeavy, D W and Billington, P J, Production Planning and Inventory Control, Prentice-Hall.
5. Wright, O W, Production and Inventory Control, Prentice Hall, NJ.

Date of Revision: July 2018
Course Objective: To introduce the fundamentals of statistical process control techniques, acceptance sampling, reliability, product and process design, and the use of these concepts and techniques in manufacturing and service systems for quality control and improvement.

Course Outline:

1. History and Evolution of Quality Control and Management.
3. (a) Probability Models for Quality Control
   (b) Descriptive Statistics, Sampling, and Inferences
4. Statistical Process Control (SPC):
   (a) Control Chart Principles: Causes of Variation, Statistical Aspects of Control Charting, Concept of Rational Subgrouping, Detecting Patterns on Control Charts
   (b) Control Charts for Attributes: p, np, c, u, and U charts
   (c) Control Charts for Variables: R, X, S, and X charts
   (d) Special Control Charts: Cusum, Trend, Modified and Acceptance, Moving Average, Geometric Moving Average, and Multivariate Control Charts.
   (e) Specifications and Tolerances: Natural Tolerance Limits and Specification Limits, Process Capability Ratios, and Process Capability Analysis
5. Acceptance Sampling:
   (a) Fundamental Concepts
   (b) Acceptance Sampling by Attributes: Single, Double, Multiple, and Sequential Sampling Plans, MIL-STD-105E, Dodge-Romig, and ANSI-ASQC-Z1.4 Plans, Continuous Sampling Plans
   (c) Acceptance Sampling by Variables: Types of Plans, Plans for a Process Parameter, Plans to Control the Lot Percent Nonconforming, MIL-STD- 414 and ANSI/ASQC Z 1.9
7. Product and Process Design:
   (a) Experimental Designs: Completely Randomized Design, Randomized Block Design, Latin Square Design
   (b) Factorial Experiments

Pre-Requisites: 

Course Objective: The objective of this course is to introduce the basic concepts, issues and tools and techniques to be used at different phases of product development to have an in-depth understanding and knowledge about the effect and role of technology, market conditions, manufacturing methods and quality for product development.

Course Outline:

1. Introduction
2. Product and Process Design: Important approaches in product development, stages in product development process, tools and techniques used in product development, technical risk management, customer needs and product development, common approaches for customer need analysis conceptual design, detailed design, test, evaluation and manufacturing.
3. Quality Principles in Design
4. Robust Design and Taguchi Method: Taguchi Philosophy, Taguchi Methods, quality loss function, signal-to-noise ratio, orthogonal arrays, robust design, system design, parameter design, tolerance design, comparison of robust and classical design of experiments.

Learning Resources:

Date of Revision: July 2018
Course Objective: To introduce the basic concepts of the important issues, related to theory and application, in ergonomics and human factors engineering for worksystem performance and product design improvement, and the use of these concepts and techniques to select jobs and situations in industries.

Course Outline
Introduction to Simple and Complex Work systems and Relevance of Human Factors or Ergonomics; History and Recent Trend in Human Factors; Anatomy, Posture, and Body Mechanics; Anthropometric Principles in Work system Design; Design of Manual Handling Tasks and Hand Tools; Workload, Work Capacity and Fitness for Work; Measuring Work by Physiological Methods; Choice of Work Posture; Fatigue Measurement and Evaluation; Physical Work and Heat Stress, Noise Exposure and Hearing Loss, Design of Thermal, Auditory, and Lighting in Physical Environment; Industrial Product Design; Illumination at Work; Whole Body Vibration; Design of VDT Work Station.

Pre-Requisites:

Course Objective: To introduce the basic concepts, issues and tools and techniques used for reliability analysis and its estimation for products, processes and systems with varied configurations, conditions and constraints including identification of reliability improvement alternatives.

Course Curriculum:
1. Introduction: Reliability definition, reliability of a system, reliability as a function of time.
2. General Reliability Function: Mean time to failure (MTTF), instantaneous failures or hazard rate function.
3. Constant Failure Rate (CFR) Models
4. Time-Dependent Failure Models
5. System Reliability: System with components in series, system with components in parallel, systems with standby components.
6. Operating Characteristic Curves;

Learning Resources:
Subject Code: IEM203D

Category: Program Elective – III

Subject Name: Six Sigma Fundamentals and Applications

Semester: Second

L-T-P: 3-0-0

Credit: 3

Pre-Requisites:

Objective of the Course: The objective of this course is to introduce basic concepts of ‘six-sigma’ and methods employed for its application in an industrial environment. Comprehension of relevant tools, techniques and methodologies as required for achieving and sustaining performance and capability at ‘six-sigma’ level for activities and/or resources at different levels of a manufacturing organization is the main purpose of introducing such a course for the students.

Course Outline:

1. Introduction: Historical background, present industrial scenario, basic concepts of Six Sigma, applications of Six Sigma, overview of Six Sigma methodology, six sigma tools and techniques.
3. Six Sigma Methodology: Detailed steps, DMAIC, DFSS, and axiomatic design.
5. Six Sigma Tools and Techniques: Multivariate process capability studies: background and concepts, measure indices and their applications, numerical examples and case studies.
6. Six Sigma through Design Improvement-Part-I: Process, equipment, and material, manufacturability and tolerancing, numerical examples and case studies.
7. Six Sigma through Design Improvement-Part-II: Parameter design, robust optimization, numerical examples and case studies.

Pre-Requisites:

Course Objective: To introduce the fundamentals of the topics as mentioned in the coverage, the relevant statistical and mathematical tools, techniques, and methodologies, and the use of these concepts and techniques in manufacturing and service systems for better materials control and inventory management to the students at the undergraduate level.

Course Outline:

1. Introduction to Inventory and Materials Management: Definitions, Need for inventory, Structure of inventory models, Nature of analysis, Relationships with other functions, Inventory costs and their measurement, Types of inventory, Importance and areas of materials management, Selective inventory management techniques, Classification of inventory problems.

2. Static Inventory Problems under Risk: General characteristics, Opportunity cost matrix and cost structure, Mathematical formulations (discrete and continuous cases), Imputation of costs, Problem solving and case studies.

3. Static Inventory Problems under Uncertainty: General characteristics, Decision criteria for uncertainty and inventory problems, Distribution-free analysis (Tchebycheff and other inequalities), Comparison of analyses with full and partial information, Problem solving and case studies.

4. Dynamic Inventory Problems under Certainty: General characteristics, Optimal lot size model (with constant and varying demand), Quantity discounts, Optimal policy curve for more than one item, Solution techniques for multiple items, Inventory problem formulation and solution under several types of constraints, Problem solving and case studies.

5. Dynamic Inventory Problems under Risk: General characteristics, Types of inventory control systems, Switching matrices, Optimal selling policy with fluctuating prices, Queuing model for varying lead time, Problem solving and case studies.

6. Dynamic Inventory Problems under Uncertainty: General characteristics, Moments of convolutions, Design of Q- and P-system of inventory control, Use of central warehouses, Problem solving and case studies.
7. **Design of Inventory Study and Decision Procedures**: Elements of inventory study, Approaches available, Size of inventory investment and number of items carried, System analysis with many items carried, many locations, and many departments, System design by simulation, Problem solving and case studies.

8. **Current Approaches**: Concepts of MRP and JIT-based production systems, Concept of zero inventory, Concept of OPT/Theory of Constraints, Simulation modelling of inventory management systems, Critical Implementation issues related to inventory control.

9. **Other Areas of Materials Management**: Fundamental concepts of and related techniques (quantitative and non-quantitative) in purchasing, storing, distribution, and value analysis and engineering, Problem solving and case studies.

Pre-Requisites:

Course Objective: to introduce of basic concept and issues in logistics and supply chain for improved and optimized performance of inbound and outbound logistics as well as functional systems, use of these concepts and techniques for select industrial products.

Course Outline:

1. Nature and scope of logistics, Logistics environment;
2. Logistic decisions: facility location, transportation, storage and material handling, Logistics information systems, Logistics audit and control. Introduction to SCM- Principles and issues;
3. Inbound and outbound logistics: Supply chain as a source of competitive advantage, Supply chain coordination- procurement, vendor development, reduced sourcing and supplier partnership, managing inventory in SCM and Risk pooling, coordinated inventory decision, co-ordinated pricing decision, coordinated product and process design ;
4. Distribution strategies: customer service, physical distribution planning, Material handling, Facility and warehousing decision;

Learning Resources:

2. Walters, Logistics, An Introduction to Supply Chain Management, Palgrave Macmillan.

Date of Revision: July 2018
Subject Code : IEM204C
Category : Program Elective – IV
Subject Name : Enterprise Resource Planning
Semester : Second
L-T-P : 3-0-0
Credit:3
Pre-Requisites:

Introduction to ERP: Enterprise – An Overview Integrated Management Information, Business Modeling, Integrated Data Model, Benefits of ERP, ERP and Related Technologies, Business Process Reengineering (BPR), Data Warehousing, Data Mining, OLAP, SCM.

ERP Market: ERP Market Place, SAP AG, PeopleSoft, Baan, JD Edwards, Oracle, QAD, SSA, Enterprise Integration Applications (EIA), ERP and E-Commerce, ERP and Internet.

ERP Present and Future: Future Directions and Trends in ERP.

Learning Resources:

**Course Objective:** To introduce the fundamentals of production systems design with major emphasis on application of the state-of-the-art techniques and processes so as to achieve the best possible planning and control in a manufacturing environment. The knowledge in the topics as mentioned in the course outline is essential to achieve this objective. The course is intended to be designed for creating a knowledge-base of the state-of-the-art manufacturing systems.

**Course Outline:**

**Introduction:** Four plane concept of manufacturing – planning, control, material flow, and manufacturing process. Control loop of a manufacturing system. Basic functions of a manufacturing facility for small- and medium-size production runs. Functions of a computer a manufacturing organization.

**Concurrent Engineering:** Sequential versus concurrent engineering, mathematical model for interactions between design and manufacturing, benefits of CE, characterization of CE environment, framework for integration of life-cycle phases in CE, CE techniques, difficulties associated with CE, examples.

**Automated Material Handling and Storage Systems:** Principles of MH, MH equipment, types and components of AGVS, automated storage and retrieval systems, distributed computer control architecture for AGVS and AS/RS, conveyors.

**Numerical Control:** Conventional numerical control (NC) – basic components of an NC system, applications of NC, economics of NC, and problems with conventional NC. Computer Numerical Control (CNC), Direct Numerical Control (DNC), and combined CNC/DNC systems. NC programming.

**Process Planning:** Manufacturing environment for process planning. Generative process planning, variant process planning, and CAPP system. Computer-aided generation of process plans.

**Group Technology, CMS, and MRP:** Classification methods – OPITZ, CODE, and MICLASS systems. Master production schedule. Material Requirements Planning (MRP). Manufacturing Resources Planning (MRP-II)–capacity requirement planning, order release planning, and operations sequencing. Group scheduling in MRP-II environment. Introduction to JIT-based techniques.

**Flexible Manufacturing Systems:** Types of flexibility, key characteristics, and basic features of physical components of FMS, control components of FMS, operational problems and layout considerations, simulation modeling and FMS benefits.

**JIT Manufacturing Systems:** Overview of TPS, pull versus push system, types of kanban, kanban planning and control models – deterministic and probabilistic models, signal kanban, other types of
kanbans, alternative JIT systems, JIT purchasing, barriers to and benefits of JIT implementation, examples.

**Learning Resources:**

Pre-Requisites:

Course Outline:

Introduction to Analysis and Design of intelligent systems using soft computing techniques.
Application of soft computing; Soft Computing Methods.
Artificial Neural Network (ANN): Fundamental Model, Learning Rules
Hebb Net Architecture, Algorithm, linear separability; Perceptron Networks- single and multilayer; Adeline and Madeline Networks;
Feedback Networks – Discrete Hopfield Net – architecture, training and application algorithm, analysis (ATTAA)
Feed Forward Networks (ATTAA): Back Propagation, Radial Basis Function
Self Organizing Feature Map : Kohonen SOM, LVQ
Fuzzy Systems / Logic – Fuzzy Set Theory; Fuzzy Sets Applications
Hybrid : Neuro-Fuzzy Modeling
Genetic Algorithms and Theory

Subject Name : Design of Experiments
Semester : Third
L-T-P : 3-0-0
Credit:3
Pre-Requisites:

Course Objective: The objective of this course is to introduce the basic concepts and methods of design of experiments and its applications with real-world design problems.

Course Outline:
1. Introduction: Typical applications of experimental design, basic principles, guidelines for designing experiments, experimental design fundamentals.
2. Simple Comparative Experiments: Basic statistical concept, inferences about the differences in means, randomized designs, inferences bout the differences in means, paired comparison designs;
3. Experiments with a Single Factor
4. Randomized Blocks, Latin Squares, and Related Designs
5. Introduction to Factorial Designs: Basic definitions and principle, the two factor factorial design.
6. The $2^k$ Factorial Design
7. Blocking and Confounding in the $2^k$ Factorial Design
8. Two-Level Fractional Factorial Designs
9. Response Surface Methods and Other Approaches to Process Optimization

Textbooks:

**Pre-Requisites:**

A Project Dissertation would be of two-semester duration and one project would be allotted to one student. The Progress of project dissertation up to the end of the Third Semester would be evaluated by the concerned supervisor and a panel of examiners through a seminar presentation on the progress of dissertation followed by viva voce. The Progress of project dissertation up to the end of the Third Semester would be presented by the student concerned and viva voce will be conducted by a panel of examiners.

*Quality of the project is measured in terms of*

- Very clear and concise objectives
- Very clear methodology, articulated using technical terms indicating all steps and tools
- Cites substantial current and good quality literature
- Clarity in design/setting up of experiment.
- Benchmarks used / Assumptions made
- Interpretation of results and justification thereof and validity of the results presented.
- Overall presentation of the report

Mandatory Learning Course
Subject Code: MLC101
Category: Mandatory Learning Course
Subject Name: Research Methodology and IPR
Semester: First
L-T-P: 2-0-0
Credit: 2

Pre-Requisites:

Course Outcomes:

- At the end of this course, students will be able to understand research problem formulation.
- Analyze research related information
- Follow research ethics
- Understand that today’s world is controlled by Computer, Information Technology, but tomorrow world will be ruled by ideas, concept, and creativity.
- Understanding that when IPR would take such important place in growth of individuals & nation, it is needless to emphasise the need of information about Intellectual Property Right to be promoted among students in general & engineering in particular.
- Understand that IPR protection provides an incentive to inventors for further research work and investment in R & D, which leads to creation of new and better products, and in turn brings about, economic growth and social benefits.

Course Outline:

Unit 1: Meaning of research problem, Sources of research problem, Criteria Characteristics of a good research problem, Errors in selecting a research problem, Scope and objectives of research problem. Approaches of investigation of solutions for research problem, data collection, analysis, interpretation, Necessary instrumentations

Unit 2: Effective literature studies approaches, analysis Plagiarism, Research ethics,

Unit 3: Effective technical writing, how to write report, Paper
Developing a Research Proposal, Format of research proposal, a presentation and assessment by a review committee

Learning Resources:

| 1     | History of Making of the Indian Constitution:  
- History  
- Drafting Committee, (Composition & Working) | 4 |
| 2     | Philosophy of the Indian Constitution:  
- Preamble  
- Salient Features | 4 |
| 3     | Contours of Constitutional Rights & Duties:  
- Fundamental Rights  
- Right to Equality  
- Right to Freedom  
- Right against Exploitation  
- Right to Freedom of Religion  
- Cultural and Educational Rights  
- Right to Constitutional Remedies  
- Directive Principles of State Policy  
- Fundamental Duties. | 4 |
|       | Organs of Governance:  
- Parliament  
- Composition  
- Qualifications and Disqualifications  
- Powers and Functions  
- Executive | 4 |
### Local Administration:
- District’s Administration head: Role and Importance,
- Municipalities: Introduction, Mayor and role of Elected Representative, CEO of Municipal Corporation.
- Elected officials and their roles, CEO Zila Panchayat: Position and role.
- Block level: Organizational Hierarchy (Different departments), Village level: Role of Elected and Appointed officials, Importance of grass root democracy

### Election Commission:
- Election Commission: Role and Functioning.
- Chief Election Commissioner and Election Commissioners.
- State Election Commission: Role and Functioning.
- Institute and Bodies for the welfare of SC/ST/OBC and women

### Course Outcome:

Students will be able to:

1. Discuss the growth of the demand for civil rights in India for the bulk of Indians before the arrival of Gandhi in Indian politics.
2. Discuss the intellectual origins of the framework of argument that informed the conceptualization of social reforms leading to revolution in India.
3. Discuss the circumstances surrounding the foundation of the Congress Socialist Party [CSP] under the leadership of Jawaharlal Nehru and the eventual failure of the proposal of direct elections through adult suffrage in the Indian Constitution.

### Learning Resources:

    i. Various yog poses and their benefits for mind & body 
    ii. Regularization of breathing techniques and its effects - Types of pranayam | 8 |

Course Outcomes:  
Students will be able to:  
1. Develop healthy mind in a healthy body thus improving social health also  
2. Improve efficiency  

Learning Resources:  
1. ‘Yogic Asanas for Group Tarining-Part-I’ : Janardan Swami Yogabhyasi Mandal, Nagpur  
2. “Rajayoga or conquering the Internal Nature” by Swami Vivekananda, Advaita Ashrama (Publication Department), Kolkata  

Date of Revision: July 2018
### Subject Name: Personality Development through life Enlightenment skills

**Category:** Audit Courses

**Subject Code:** AC101G/AC201G

**Semester:** First/Second

**L-T-P:** 2-0-0

**Credit:** 0

**Pre-Requisites:**

---

**Course Objective:**

1. To learn to achieve the highest goal happily
2. To become a person with stable mind, pleasing personality and determination
3. To awaken wisdom in students

**Course Outline:**

<table>
<thead>
<tr>
<th>Units</th>
<th>Contents</th>
<th>Hours</th>
</tr>
</thead>
</table>
| 1     | ❖ Neetisatakam-Holistic development of personality:  
• Verses- 19,20,21,22 (wisdom)  
• Verses- 29,31,32 (pride & heroism)  
• Verses- 26,28,63,65 (virtue)  
• Verses- 52,53,59 (don’ts)  
• Verses- 71,73,75,78 (do’s) | 8 |
| 2     | • Approach to day to day work and duties.  
• Shrimad Bhagwad Geeta : Chapter 2-Verses 41, 47,48,  
• Chapter 3-Verses 13, 21, 27, 35,  
Chapter 6-Verses 5,13,17, 23,  
Chapter 18-Verses 45, 46, 48. | 8 |
| 3     | • Statements of basic knowledge.  
• Shrimad Bhagwad Geeta : Chapter2-Verses 56, 62, 68  
• Chapter 12 -Verses 13, 14, 15, 16,17, 18  
• Personality of Role model. Shrimad Bhagwad Geeta :  
Chapter2-Verses 17,Chapter 3-Verses 36,37,42,  
Chapter 4-Verses 18, 38,39  
Chapter18 – Verses 37,38,63 | 8 |

**Course Outcomes:**

Students will be able to

1. Study of Shrimad-Bhagwad-Geeta will help the student in developing his personality and achieve the highest goal in life
2. The person who has studied Geeta will lead the nation and mankind to peace and prosperity
3. Study of Neetishatakam will help in developing versatile personality of students

**Learning Resources:**

1. “Srimad Bhagavad Gita” by Swami Swarupananda Advaita Ashram (Publication Department), Kolkata

Date of Revision: July 2018
Subject Name: Sanskrit for Technical Knowledge  
Category: Audit Courses  
Subject Code: AC101H/AC201H  
Semester: First/Second  
L-T-P: 2-0-0  
Credit: 0

Pre-Requisites:

Course Objective:
1. To get a working knowledge in illustrious Sanskrit, the scientific language in the world
2. Learning of Sanskrit to improve brain functioning
3. Learning of Sanskrit to develop the logic in mathematics, science & other subjects enhancing the memory power
4. The engineering scholars equipped with Sanskrit will be able to explore the huge knowledge from ancient literature.

Course Outline:

<table>
<thead>
<tr>
<th>Units</th>
<th>Contents</th>
<th>Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>❖ Alphabets in Sanskrit,</td>
<td>8</td>
</tr>
<tr>
<td></td>
<td>❖ Past/Present/Future Tense,</td>
<td></td>
</tr>
<tr>
<td></td>
<td>❖ Simple Sentences</td>
<td></td>
</tr>
<tr>
<td>2</td>

<tr>
<td></td>
<td>❖ Technical information about Sanskrit Literature</td>
<td></td>
</tr>
<tr>
<td>3</td>
<td>❖ Technical concepts of Engineering-Electrical, Mechanical, Architecture,</td>
<td>8</td>
</tr>
<tr>
<td></td>
<td>Mathematics</td>
<td></td>
</tr>
</tbody>
</table>

Course Outcome:
Students will be able to
1. Understanding basic Sanskrit language
2. Ancient Sanskrit literature about science & technology can be understood
3. Being a logical language will help to develop logic in students

Learning Resources:
1. “Abhyaspustakam” – Dr. Vishwas, Samskrita-Bharti Publication, New Delhi
2. “Teach Yourself Sanskrit” Prathama Deeksha-VempatiKutumbshastri, Rashtriya Sanskrit Sansthanam, New Delhi Publication

Date of Revision: July 2018
Open Electives
Subject Name: Business Analytics
Category: Open Elective

Subject Code: OE301
Semester: Third
L-T-P: 3-0-0
Credit: 3

Pre-Requisites:

Course Objective:
1. Understand the role of business analytics within an organization.
2. Analyze data using statistical and data mining techniques and understand relationships between the underlying business processes of an organization.
3. To gain an understanding of how managers use business analytics to formulate and solve business problems and to support managerial decision making.
4. To become familiar with processes needed to develop, report, and analyze business data.
5. Use decision-making tools/Operations research techniques.
6. Manage business process using analytical and management tools.
7. Analyze and solve problems from different industries such as manufacturing, service, retail, software, banking and finance, sports, pharmaceutical, aerospace etc.

Course Outline:

<table>
<thead>
<tr>
<th>Units</th>
<th>Contents</th>
<th>Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Business analytics: Overview of Business analytics, Scope of Business analytics, Business Analytics Process, Relationship of Business Analytics Process and organization, competitive advantages of Business Analytics. Statistical Tools: Statistical Notation, Descriptive Statistical methods, Review of probability distribution and data modeling, sampling and estimation methods overview.</td>
<td>9</td>
</tr>
<tr>
<td>3</td>
<td>Organization Structures of Business analytics, Team management, Management Issues, Designing Information Policy, Outsourcing, Ensuring Data Quality, Measuring contribution of Business analytics, Managing Changes. Descriptive Analytics, predictive analytics, predicative Modeling, Predictive analytics analysis, Data Mining, Data Mining Methodologies, Prescriptive analytics and its step in the business analytics Process, Prescriptive Modeling, nonlinear Optimization.</td>
<td>9</td>
</tr>

<tbody>
<tr>
<td>6</td>
<td>Recent Trends in: Embedded and collaborative business intelligence, Visual data recovery, Data Storytelling and Data journalism.</td>
</tr>
</tbody>
</table>

Course Outcomes:
1. Students will demonstrate knowledge of data analytics.
2. Students will demonstrate the ability of think critically in making decisions based on data and deep analytics.
3. Students will demonstrate the ability to use technical skills in predicative and prescriptive modelling to support business decision-making.
4. Students will demonstrate the ability to translate data into clear, actionable insights.

Learning Resources:
2. Business Analytics by James Evans, persons Education.

Date of Revision: July 2018
Subject Name: Operations Research  
Category: Open Elective

Subject Code: OE301B  
Semester: Third

L-T-P: 3-0-0  
Credit: 3

Course Outcomes:

At the end of the course, the student should be able to
1. Students should be able to apply the dynamic programming to solve problems of discrete and continuous variables.
2. Students should be able to apply the concept of non-linear programming.
3. Students should be able to carry out sensitivity analysis.
4. Students should be able to model the real world problem and simulate it.

Course Outline:

Unit-I
Optimization Techniques, Model Formulation, models, General Linear Programming Formulation, Simplex Techniques, Sensitivity Analysis, Inventory Control Models

Unit-II
Formulation of a LPP - Graphical solution revised simplex method duality theory dual simplex method - sensitivity analysis - parametric programming

Unit-III
Nonlinear programming problem - Kuhn-Tucker conditions min cost flow problem max flow problem CPM/PERT

Unit-IV
Scheduling and sequencing - single server and multiple server models - deterministic inventory models - Probabilistic inventory control models - Geometric Programming

Unit-V
Competitive Models, Single and Multi-channel Problems, Sequencing Models, Dynamic Programming, Flow in Networks, Elementary Graph Theory, Game Theory Simulation

Learning Resources:

Date of Revision: July 2018
Subject Name: Cost Management of Engineering Projects:  
Category: Open Elective  
Subject Code: OE301C  
Semester: Third  
L-T-P: 3-0-0  
Credit: 3  
Pre-Requisites:

Course Outline:

Unit-I
Introduction and Overview of the Strategic Cost Management Process

Unit-I

Unit-I
Project: meaning, Different types, why to manage, cost overruns centres, various stages of project execution: conception to commissioning. Project execution as conglomeration of technical and non technical activities. Detailed Engineering activities. Pre project execution main clearances and documents Project team: Role of each member. Importance Project site: Data required with significance. Project contracts. Types and contents. Project execution Project cost control. Bar charts and Network diagram. Project commissioning: mechanical and process

Unit-I
Cost Behaviour and Profit Planning Marginal Costing; Distinction between Marginal Costing and Absorption Costing; Break-even Analysis, Cost-Volume-Profit Analysis. Various decision-making problems. Standard Costing and Variance Analysis.

Unit-I

Unit-I

Learning Resources:
1. Cost Accounting A Managerial Emphasis, Prentice Hall of India, New Delhi
2. Charles T. Horngren and George Foster, Advanced Management Accounting
3. Robert S Kaplan Anthony A. Alkinson, Management & Cost Accounting

IN INDUSTRIAL ENGINEERING & MANAGEMENT PROGRAMME

5.  N.D. Vohra, Quantitative Techniques in Management, Tata McGraw Hill Book Co. Ltd.

Date of Revision: July 2018
Subject Name: Industrial Safety  
Category: Open Elective

Subject Code: OE301D  
Semester: Third

L-T-P : 3-0-0  
Credit:3

Pre-Requisites:

Course Outline:

Unit-I
Industrial safety: Accident, causes, types, results and control, mechanical and electrical hazards, types, causes and preventive steps/procedure, describe salient points of factories act 1948 for health and safety, wash rooms, drinking water layouts, light, cleanliness, fire, guarding, pressure vessels, etc, Safety colour codes. Fire prevention and fire fighting, equipment and methods.

Unit-II
Fundamentals of maintenance engineering: Definition and aim of maintenance engineering, Primary and secondary functions and responsibility of maintenance department, Types of maintenance, Types and applications of tools used for maintenance, Maintenance cost & its relation with replacement economy, Service life of equipment.

Unit-III

Unit-IV
Fault tracing: Fault tracing-concept and importance, decision tree concept, need and applications, sequence of fault finding activities, show as decision tree, draw decision tree for problems in machine tools, hydraulic, pneumatic, automotive, thermal and electrical equipment’s like, i. Any one machine tool, ii. Pump iii. Air compressor, iv. Internal combustion engine, v. Boiler, vi. Electrical motors, Types of faults in machine tools and their general causes.

Unit-V

Date of Revision: July 2018
Learning Resources:

Pre-Requisites:

Course Outline:

Unit-I

Unit-II

UNIT – III

UNIT – IV

UNIT – V
Strength: Laminar Failure Criteria-strength ratio, maximum stress criteria, maximum strain criteria, interacting failure criteria, hygrothermal failure. Laminate first play failure-insight strength; Laminate strength-ply discount truncated maximum strain criterion; strength design using caplet plots; stress concentrations.

Learning Resources:

Date of Revision: July 2018
Subject Name: Waste to Energy
Category: Open Elective
Subject Code: OE301F
Semester: Third
L-T-P: 3-0-0
Credit: 3
Pre-Requisites:

Course Outline:

Unit-I
Introduction to Energy from Waste: Classification of waste as fuel – Agro based, Forest residue, Industrial waste - MSW – Conversion devices – Incinerators, gasifiers, digestors

Unit-II
Biomass Pyrolysis: Pyrolysis – Types, slow fast – Manufacture of charcoal – Methods – Yields and application – Manufacture of pyrolytic oils and gases, yields and applications

Unit-III

Unit-IV
Biomass Combustion: Biomass stoves – Improved chullahs, types, some exotic designs, Fixed bed combustors, Types, inclined grate combustors, Fluidized bed combustors, Design, construction and operation - Operation of all the above biomass combustors.

Unit-V
Biogas: Properties of biogas (Calorific value and composition) - Biogas plant technology and status - Bio energy system - Design and constructional features - Biomass resources and their classification - Biomass conversion processes - Thermo chemical conversion - Direct combustion - biomass gasification - pyrolysis and liquefaction - biochemical conversion - anaerobic digestion – Types of biogas Plants – Applications - Alcohol production from biomass - Bio diesel production - Urban waste to energy conversion - Biomass energy programme in India.
